A good text, they told us, ought to spell out how theory and research relate to everyday life. It should be loaded with interesting examples that help make the subject matter clear. A good textbook should speak to students with a reader-friendly voice, talking to them rather than over their heads or down at them. Our college students told us that a good text
 should be visually inviting—ideally offering at least one interesting extra-textual element on every two-page spread. Finally, they told us that a good text should give them tools to master the material and earn a grade they can be proud of. We also asked our colleagues what they think distinguishes a good textbook. Above all, they told us, a good text
 must present an accurate and comprehensive picture of the academic work it addresses. It should be manageable within the length of an academic term. An ideal text, our colleagues told us, would make life easier for them by giving students plenty of learning support. BASIC APPROACH We have worked hard to make sure this ninth edition of
 Understanding Human Communication meets the needs of both students and their professors as described above. If we've succeeded, students will find this book is clear, interesting and useful, and that it provides tools that will help them succeed in their first serious exploration of human communication. And if we've done our job, professors will find
 the book does justice to the discipline and helps make their teaching more efficient and effective. This edition builds on the approach that has served over a half million students and their professors well in the past. Rather than take sides in the theory vs. skills debate that often rages in our discipline, Understanding Human Communication treats
 scholarship and skill development as mutually reinforcing. Its reader-friendly approach strives to present material clearly without being overly simplistic. A wealth of examples helps make concepts clear and interesting. A handsome design makes the material inviting, as do a collection of stimulating photos, interesting readings, amusing and
 instructive cartoons, and well-chosen quotations. Marginal definitions of cultural idioms help non-native English speakers make sense of colloquial expressions. Every chapter of this book emphasizes the influence of both culture and technology on human communication. Along with discussion in the text itself, sidebars highlight key topics in this area
 Understanding Diversity sidebars (many new to this edition) address subjects including the cultural challenges of overseas customer service call centers; how different cultures regard the kinds of intimacy 21st century western society views as ideal; and
 how effective public speakers deal with cultural diversity in their audiences. Understanding Communication Technology boxes focus on topics including how instant messaging can improve relationships; how online game playxiii i-xvii_FM_Adler xiv 2/28/05 10:05 AM Page xiv PREFACE ers create new identities; the specialized vocabulary of e-
 mail;software that allows groups to work online;how heavy television viewing by children can create poor listening skills later in life; and how online groups can promote unhealthy practices like eating disorders. CHANGES IN THE NINTH EDITION Our primary focus in this edition has been on enhancing student success. This edition of Understanding
 Human Communication contains several improvements that should help students master the material more effectively. Case studies now open each part, presenting real-life communication challenges on the job, in school, and in personal relationships. Each case study comes with thought provoking questions that encourage students to apply the information in each chapter to understand and solve the problem. Each chapter now opens with a list of chapter highlights that preview the upcoming material in a way that is more readable and understandable than a traditional outline. These highlights aren't just a preview: They also serve as a useful review tool that will help students understand the
 chapter's contents as they study for exams. Key terms are now listed at the end of each chapter, where they will make more sense after students have read the material. Page numbers where the term first appeared accompany each entry, making it easy for students to refer to that section of the text. Marginal icons like those in the margin direct
 students to resources that will help them understand concepts in the text and apply them to their own lives. The pencil icon refers to activities at the end of each chapter. The CD icon indicates an activity in the Student Resources section of the CD-ROM that accompanies the text. Every chapter of this edition contains changes that expand and enrich
the contents. Among other topics, this edition discusses the ethical challenges of identity management online, how the careless use of language can cause others pain, ways to detect describes how interpersonal communication operates on the Internet, explores the ethics of "benign" discussion of the ethics of th
 more effective. For students, each new copy of the text comes with a free Student Resources Disc, which includes a complete study guide to the text; dozens of fill-in-the-spaces activities that students can complete on a computer, then print out and turn in for feedback; self-tests; sample speech videos; and much more. The Understanding Human Communication Web site (www.oup.com/us/uhc) offers a wealth of resources including links to articles and websites on a variety of settings. For those wanting additional support, a brief Student Success Manual is available
 and study materials that appear in the Student Resources Disc. ACKNOWLEDGMENTS Anyone involved with creating a textbook knows that the authors wouldn't exist without the contributions of many people. We are grateful to the talent and hard work of our colleagues who developed the package of ancillary materials that will help instructors
 teach more effectively and students succeed in mastering the material in this text. TJ Jenkins of James Madison University developed the massive Instructor's Manual and bank of exam questions. The eagle-eyed Ingrid Peternel, College of DuPage, continued to define Cultural Idioms that will help non-native speakers understand the text better (while to define Cultural Idioms that will help non-native speakers understand the text better (while to define Cultural Idioms that will help non-native speakers understand the text better (while to define Cultural Idioms that will help non-native speakers understand the text better (while to define Cultural Idioms that will help non-native speakers understand the text better (while to define Cultural Idioms that will help non-native speakers understand the text better (while to define Cultural Idioms that will help non-native speakers understand the text better (while to define Cultural Idioms that will help non-native speakers understand the text better (while to define Cultural Idioms that will help non-native speakers understand the text better (while to define Cultural Idioms that will help non-native speakers understand the text better (while to define Cultural Idioms that will help non-native speakers understand the text better (while to define Cultural Idioms that will help non-native speakers understand the text better (while to define Cultural Idioms that will help non-native speakers understand the text better (while to define Cultural Idioms that will help non-native speakers understand the text better (while to define Cultural Idioms that will help non-native speakers understand the text better (while to define Cultural Idioms that will help non-native speakers understand the text better (while to define Cultural Idioms that will help non-native speakers understand the text better (while to define Cultural Idioms that will help non-native speakers understand the text better (while to define Cultural Idioms that will help non-native speakers understand the text b

 professionals at Oxford University Press have been a delight to work with on this project. We salute Peter Labella, Sean Mahoney, Elyse Dubin, Karen Shapiro, Scott Burns, Jeanne Ambrosio, Cathleen Elliott, Jill Crosson, Emily Pillars, and Shiwani Srivastava. We also thank the freelance professionals on the UHC team: Janet Bollow Alleyn for designing
 this handsome book you are holding, Sherri Adler for locating the photos it contains, and Sandra Lord for securing rights to use them. We are deeply grateful to our talented and tireless development editor Carol Wada, who orchestrated this project. Finally, we thank our families for their good-natured tolerance and support of our efforts during the
 year we worked on Understanding Human Communication. In the end, we did it for you. Ronald B.Adler George Rodman i-xvii FM Adler 2/28/05 10:05 AM Page xviii CASE STUDY You have been approached by a publishing company that is
  planning a book titled About the Americans. This guide is designed for travelers from other countries who will be a compilation of observations by a large number of About the Americans people who have lived in the United States, both native-born
 Americans and visitors. The authors believe that insights of keen observers will reveal a great deal about how communication operates in this country. The publishers have chosen you because you are a student who has systematically studied com- munication. They will pay handsomely if your observations show how the principles covered in your
 communication course operate in everyday life. Use the activities and questions below to structure your observations. Give specific examples of communication in the United States to illustrate each of your points. As you read the chapters in this unit, consider the following: CHAPTER 2 CHAPTER 3 1. Describe an incident that illustrates
 how communication is a symbolic process. 1. Describe a case where an American and someone from another country might have incompatible narratives. 2. Using your own experience, describe 2-3 examples of each type of communication (intrapersonal,
 dyadic/interpersonal, small group, public, and mass) in everyday life. 3. Discuss one or more typical communication transactions that aim at satisfying each type of need: physical, identity, social, and practical. 4. Use an incident from everyday life to illustrate the transactional process of communication, as described on pages 15–18. 5. Use the
 characteristics of competent communication (pages 18-24) to evaluate one transaction you have observed or experienced. 6. Show how avoiding common misconceptions about communication (pages 36-39), situational factors (pages 39-41), and
 cultural differences (pages 41-43) have led to friction. How might greater empathy have helped shape your self-concept. 4. Using yourself or someone you know as an example, describe how the process of identity management
 operates during an average day. Discuss the ethics of presenting multiple identities. 2. Recall incidents when (a) language shaped your attitudes, and (b) when your own choice of words reflected your attitudes. 3. Explain how the types of troublesome language described on pages 88–94 have caused problems in a situation you experienced or
 observed. 4. Based on your experience in U.S. culture, described on pages 98-103 affect communication styles described on pages 103-106 operate in mainstream U.S. culture. xviii-031 Ch01 Adler 2/28/05 11:57 AM Page 1 CHAPTER 5 1. Described on pages 98-103 affect communication styles described on pages 103-106 operate in mainstream U.S. culture. xviii-031 Ch01 Adler 2/28/05 11:57 AM Page 1 CHAPTER 5 1. Described on pages 98-103 affect communication styles described on pages 103-106 operate in mainstream U.S. culture. xviii-031 Ch01 Adler 2/28/05 11:57 AM Page 1 CHAPTER 5 1. Described on pages 103-106 operate in mainstream U.S. culture. xviii-031 Ch01 Adler 2/28/05 11:57 AM Page 1 CHAPTER 5 1. Described on page 1 CHAPTER 5 1. Desc
 situations from your own experience illustrating the listening misconceptions listed on pages 116-119. 1. Use the information in this Chapter to write a set of guidelines for newcomers to the United States on how nonverbal communication operates in this country. Pay special attention to unspoken rules governing various types of nonverbal
 communication: touch, voice, time, etc. 2. Recall examples of at least three of the faulty listening behaviors described on pages 119-121. 3. Describe how a situation at work or school looks and sounds different depending on which of the personal listening styles (pages 126-127) was used. 4. Apply the guidelines in the second half of this chapter to
 three situations that require good listening: one informational, one critical, and one empathic. ELEMENTS OF COMMUNICATION CHAPTER 4 xviii-031 Ch01 Adler 2/28/05 11:57 AM Page 2 AFTER STUDYING THE MATERIAL IN THIS CHAPTER . . . . You should understand: 1. The working definition and characteristics of communication. 2. The types
 of communication covered in this book. 3. The needs satisfied by communication and give specific examples of the various
 types of communication introduced in this chapter to identify the degree to which communication (yours or others') in a specific situation is competent and suggest ways of increasing the competence level. 4. Identify how misconceptions
  about communication can create problems and suggest how a more accurate analysis of the situations you describe can lead to better outcomes. xviii-031_Ch01_Adler 2/28/05 11:57 AM Page 3 CHAPTER HIGHLIGHTS Communication, as we will study it in this book, possesses three important characteristics:
 process It is symbolic There are several different types of communication introduced in this chapter: Communicators Intrapersonal Defining the nature of competence and how it is acquired Outlining the characteristics of competent communicators Intrapersonal Defining the nature of competence and how it is acquired Defining the characteristics of competence is a measure of a person's effectiveness. This chapter explores competence by Defining the nature of competence and how it is acquired Defining the characteristics of competence by Defining the nature of competence and how it is acquired Defining the nature of competence by Defining the nature of competence by Defining the nature of competence and how it is acquired Defining the nature of competence by Defining the nature of competence by Defining the nature of competence and how it is acquired Defining the nature of competence by Defining the nature of competence by Defining the nature of competence by Defining the nature of competence and how it is acquired Defining the nature of competence by Defining the nature of competence and how it is acquired Defining the nature of competence by Defining the nature of competence and how it is acquired Defining the nature of competence and how it is acquired Defining the nature of competence and how it is acquired Defining the nature of competence and how it is acquired Defining the nature of competence and how it is acquired Defining the nature of competence and how it is acquired Defining the nature of competence and how it is acquired Defining the nature of competence and how it is acquired Defining the nature of competence and how it is acquired Defining the nature of competence and how it is acquired Defining the nature of competence and how it is acquired Defining the nature of competence and how it is acquired Defining the nature of competence and how it is acquired Defining the nature of competence and how it is acquired Defining the nature of the nature of competence and how it is acquired Defining the nature 
  Dyadic/interpersonal Small group Clarifying certain misconceptions about communication helps us understand how the process works effectively. We will consider the following clarifying certain misconceptions: Public Memory and Pu
 needs Models of communication help us understand what is involved in this process. 
The linear model is familiar, but overly simplistic 
The transactional model better describes how people communication: What and Why xviii-031_Ch01_Adler 4 PART ONE 2/28/05 11:57 AM Page 4 ELEMENTS OF
 COMMUNICATION COMMUNICATION DEFINED Because this is a book about communication, it makes sense to begin by defining that term. This is not as simple as it might seem because people use the term in a variety of ways that are only vaguely related:
 relationships as "We just can't communicate" or "We communicate" or "We communicate perfectly." Businesspeople talk about "office communications systems" consisting of communications systems communications systems communications and other animals. Certain organizations label themselves "communications systems" communications and other animals.
 conglomerates," publishing newspapers, books, and magazines and owning radio and television stations. There is clearly some relationship among uses of the term such as these, but we need to narrow our focus before going on. A look at the table of contents of this book shows that it obviously doesn't deal with animals, computers, or newspapers
 Neither is it about Holy Communion, the bestowing of a material thing, or many of the other subjects mentioned in the Oxford English Dictionary's 1,200-word definition of communication. What, then, are we talking about when we use the term communication? A survey of the ways in which scholars use the word will show that there is no single
 universally accepted usage. Some definitions are long and complex, whereas others are brief and simple. This isn't the place to explore the differences between these conceptions or to defend one against the others. What we need is a working definition that will help us in our study. For our purposes we will say that communication refers to the process
 of human beings responding to the symbolic behavior of other persons. A point-by-point examination of this definition reveals some important characteristics of communication as we will be studying it. Source: © The New Yorker Collection 1984 Warren Miller from cartoonbank.com. All Rights Reserved. Communication Is Human In this book we'll be
 discussing communication between human beings. Animals clearly do communicate: Bees instruct their hive-mates about the location of food by a meaning-laden dance. Chimpanzees have been taught to express themselves with the same sign language used by deaf humans, and a few have developed impressive vocabularies. And on a more
 commonplace level, pet owners can testify to the variety of messages their animals can express. Although this subject of animal communication is fascinating and important, it goes beyond the scope of this book. 1 Communication is fascinating and important, it goes beyond the scope of this book. 1 Communication is fascinating and important, it goes beyond the scope of this book. 1 Communication is fascinating and important, it goes beyond the scope of this book. 1 Communication is fascinating and important, it goes beyond the scope of this book. 1 Communication is fascinating and important, it goes beyond the scope of this book. 1 Communication is fascinating and important, it goes beyond the scope of this book. 1 Communication is fascinating and important, it goes beyond the scope of this book. 1 Communication is fascinating and important, it goes beyond the scope of this book. 1 Communication is fascinating and important, it goes beyond the scope of this book. 1 Communication is fascinating and important, it goes beyond the scope of this book. 2 Communication is fascinating and important, it goes beyond the scope of this book. 3 Communication is fascinating and important, it goes beyond the scope of this book. 3 Communication is fascinating and important, it goes beyond the scope of this book. 3 Communication is fascinating and important is good to be a communication in the scope of this book. 3 Communication is fascinating and important is good to be a communication in the scope of this book. 3 Communication is good to be a communication in the scope of this book. 3 Communication is good to be a communication in the scope of this book. 3 Communication is good to be a communication in the scope of this book. 3 Communication is good to be a communication in the scope of the scope o
 or a conversation. In fact, communication is a continuous, ongoing process. Consider, for example, a friend's compliment about your appearance. Your interpreta- xviii-031_Ch01_Adler 2/28/05 11:57 AM Page 5 CHAPTER 1 HUMAN COMMUNICATION: WHAT AND WHY THE MANY MEANINGS OF COMMUNICATION Few words have as many
 meanings as communication. The term can refer to everything from messages on T-shirts to presidential speeches, from computer code to chimpanzee behavior. Communication has been the professional concern of philosophers, scientists (social, biological, and physical), poets, politicians, and entertainers, to name a few. Responding to this diversity
 Brent Rubin asked, "How does being interested in communication has so many different meanings. Understanding them will help explain how and why this word refers to a broad range of subjects. Unlike most subjects, communication has captured the
 interest of scholars from a wide range of fields. Ever since classical times, philosophers have joined the meaning and significance of messages. In the twentieth century, social scientists have joined the meaning and significance of messages. In the twentieth century, social scientists have joined the meaning and significance of messages. In the twentieth century, social scientists have joined the field: Psychologists examine how
  communication operates within and between societies and cultures. Political scientists explore the ways communication influences governmental affairs. Engineers use their skill to devise methods of conveying messages electronically. Zoologists focus on communication between animals. With this kind of diversity, it's no surprise that communication
 is a broad and sometimes confusing term. Interdisciplinary Heritage Sometimes the word communication refers to a field of study (of nonverbal messages or effects of televised violence on children, for example). In other cases it denotes an activity that people do. This confusion doesn't Field and Activity exist in most disciplines. People may study
 history or sociology, but they don't "historicate" or "sociologize." Having only one word that refers to both the field of study and the activity that it examines leads to confusion. Humanities, where it
 shares concerns with disciplines like English and philosophy. At the same time, other scholars in the field take an approach like their colleagues in the social sciences, such as psychology, and anthropology. And to confuse matters even further, communication is sometimes associated with the performing arts, especially in the area of oral
 interpretation of literature. This is a natural activity that we all engage in unconsciously. At the same time, there are professional communication experts whose specialized duties require training and skill. Careers such as marketing, public relations, broadcasting, speechmaking, counseling, journalism, and management all call for talent that goes far
 beyond what is required for everyday speaking and listening. Natural and Professional Communication (with an "s") has been used when referring to activities involving technology and the mass media. Communication is typically used to
 describe face-to-face and written messages, as well as the field as a whole. With the growth of communication and Human Behavior tion of those words will depend on a long series of experiences stretching far back in time: How have others judged
 your appearance? How do you feel about your looks? How honest has your friend been in the past? How have you been feeling about one another recently? All this history will help shape your friend behaves toward you and others—both in
  this situation and in the future. This simple example shows that it's inaccurate to talk about "acts" of communication as if they occurred in isolation. To put it differently, communication isn't a series of incidents pasted together like photographs in a scrapbook; instead, 5 xviii-031_Ch01_Adler 6 PART ONE 2/28/05 11:57 AM Page 6 ELEMENTS OF
 COMMUNICATION CULTURAL IDIOM tune into: focus on it is more like a motion picture in which the meaning comes from the unfolding of an interrelated series of images. The fact that communication is a process is reflected in the transactional model introduced later in this chapter. Communication Is Symbolic Symbols are used to represent
 things, processes, ideas, or events in ways that make communication possible. Chapter 3 discusses the nature of symbols in more detail, but this idea is so important that it needs an introduction now. The most significant feature of symbols in more detail, but this idea is so important that it needs an introduction now. The most significant feature of symbols in more detail, but this idea is so important that it needs an introduction now. The most significant feature of symbols is necessarily an introduction now. The most significant feature of symbols is necessarily and the most signifi
 the object you're reading now. Speakers of Spanish call it a libro, and Germans call it a libro, and Germans call it a libro, and Germans call it a buch. Even in English, another term would work just as well as long as everyone agreed to use it in the same way. We overcome the arbitrary nature of symbols by linguistic rules and customs. Effective communication depends on agreement among people about
 these rules. This is easiest to see when we observe people who don't follow linguistic conventions. For example, recall how unusual the speech of children and immigrant speakers of a language often sounds. We've already talked about words as one type of symbol. In addition, nonverbal behavior can have symbolic meaning. As with words, some
 nonverbal behaviors, though arbitrary, have clearly agreed-upon meanings. For example, to most North Americans, nodding your head up and down means "yes" (although this meaning isn't universal). But even more than words, many nonverbal behaviors are ambiguous. Does a frown signify anger or unhappiness? Does a hug stand for a friendly
 greeting or a symbol of the hugger's romantic interest in you? One can't always be sure. We'll discuss the nature of nonverbal communication in Chapter 5. CRITICAL THINKING PROBE MUST COMMUNICATION BE INTENTIONAL? Some theorists believe that any behavior that has meaning to others should be considered communication, whether it always be sure. We'll discuss the nature of nonverbal communication in Chapter 5. CRITICAL THINKING PROBE MUST COMMUNICATION BE INTENTIONAL?
 is intentional or not. To them, an involuntary grimace or overheard remark is worthy of studying. Other scholars believe that only messages that are intentionally sent and received should be considered communication. They argue that the broader definition means that the study of communication has no boundaries. Which position do you take? Be
 prepared to support your viewpoint in a discussion with others who hold the opposing viewpoint. TYPES OF COMMUNICATION Within the domain of human interaction, there are several types of communication. Each occurs in a different context. Despite the features that all share, each has its own characteristics. Intrapersonal Communication By
 saying. Try it now, before reading on. Did you hear it? It may have been saying something like "What little voice? I don't have any little voice? I don't have been saying something like "What little voice? I don't have any little voice? I don't hav
 others. Thus, even though intrapersonal communication doesn't fit the "face-toface" element of our definition of communication, it does affect those forms of interaction. You can understand the role of intrapersonal communication by imagining your thoughts in each of the following situations.
 you would like to get to know better. You pause a minute and look at the audience before beginning a ten-minute speech. The boss yawns while you are responsible. The way you handle all of these situations would depend on the intrapersonal communication that
 precedes or accompanies your overt behavior. Much of Chapter 2 deals with the perception process in everyday situations, and part of Chapter 12 focuses on the intrapersonal communication Social scientists call two persons interacting a dyad, and they ofter
 use the term dyadic communication to describe this type of communication to describe that college students spend almost half of their total communication time interacting with one other person. Observation in a variety of settings ranging from playgrounds, train depots, and shopping
 malls to other settings shows that most communication is dyadic in nature. Even communication within larger groups (think of classrooms, parties, and families as examples) consists of multiple, often shifting dyadic encounters. Dyadic interaction is sometimes considered identical to interpersonal communication; but as Chapter 6 explains, not all
 two-person interaction can be considered interpersonal in the fullest sense of the word. In fact, you will learn that the qualities that characterize interpersonal communication aren't limited to twosomes. They can be present in threesomes or even in small groups. *When you see this icon, look for an activity at the end of the chapter that will help you
 understand and apply the concept you are reading about. 7 xviii-031 Ch01_Adler 8 PART ONE 2/28/05 11:57 AM Page 8 ELEMENTS OF COMMUNICATION CULTURAL IDIOM operate in a vacuum: function as if there were no others around Small Group Communication In small group communication every person can participate actively with the
 other members. Small groups are a common fixture of everyday life. Your family is a group of students working on a class project. Whatever their makeup, small groups possess characteristics that are not present in a dyad. For instance, two or more members of a group can form a
 coalition to defend their position against other members, whereas in a dyad the members face each other on their own, without support from others. In a group, the majority of members can put pressures exist. Conformity pressures can also be
 comforting, leading group members to take risks that they would not dare if they were alone or in a dyad. With their greater size, groups also have the ability to be more creative than dyads. Finally, communication in groups is affected strongly by the type of leader who is in a position of authority. Groups are such an important communication setting
 that Chapters 8 and 9 focus exclusively on them. Public Communication Public communication occurs when a group becomes too large for all members to contribute. One characteristic of public communication is an unequal amount of speaking. One or more people are likely to deliver their remarks to the remaining members, who act as an
  audience. This leads to a second characteristic of public settings: limited verbal feedback. The audience isn't able to talk back in a two-way conversation the way they might in a dyadic or small group setting. This doesn't mean that speakers operate in a vacuum when delivering their remarks. Audiences often have a chance to ask questions and offer
 brief comments, and their nonverbal reactions offer a wide range of clues about their reception of the speaker's remarks. Public speakers usually have a greater chance to plan and structure their remarks than do communicators in smaller settings. For this reason, several chapters of this book describe the steps you can take to prepare and deliver an
  effective speech. Mass Communication Mass communication consists of messages that are transmitted to large, widespread audiences via electronic and print media: newspapers, magazines, television, radio, and so on. As you can see in the Mass Communication differs from the CD-ROM that accompanies this book, mass communication differs from the Mass Communication section on the CD-ROM that accompanies this book, mass communication differs from the Mass Communication differs from the Mass Communication section on the CD-ROM that accompanies this book, mass communication differs from the Mass Communicatio
 interpersonal, small group, and public varieties in several ways. First, mass messages are aimed at a large audience without any personal contact between sender and receivers. Second, most of the messages sent via mass communication is far less
  reporters, and execu- xviii-031 Ch01 Adler 2/28/05 11:57 AM Page 9 CHAPTER 1 HUMAN COMMUNICATION: WHAT AND WHY tives all have the power to influence mass messages in ways that don't affect most other types. Because of these and other unique characteristics, the study of mass communication raises special issues and deserves
 special treatment. FUNCTIONS OF COMMUNICATION Now that we have a working understanding of the term communication, it is important to discuss why we will spend so much time exploring this subject. Perhaps the strongest argument for studying communication is its central role in our lives. The amount of time we spend communicating is
  staggering.In one study,researchers measured the amount of time a sample group of college students spent on various activities. They found that the subjects spent an average of over 61 percent of their waking hours engaged in some form of communication. Whatever one's occupation, the results of such a study would not be too different. Most of
 us are surrounded by others, trying to understand them and hoping that they understand us: family, friends, coworkers, teachers, and strangers. There's a good reason why we speak, listen, read, and write so much: Communication satisfies most of our needs. Physical Needs Communication is so important that it is necessary for physical health. In
 fact, evidence suggests that an absence of satisfying communication can even jeopardize life itself. Medical researchers have identified a wide range of hazards that result from a lack of close relationships have two to three times the risk of early death, regardless of whether they
  without supportive relationships have three times more complications than pregnant women who suffer from the same stress but have strong social networks. Studies indicate that social isolation is a major risk factor contribution.
 to coronary disease, comparable to physiological factors such as diet, cigarette smoking, obesity, and lack of physical activity. 8 Research like this demonstrates the importance of having satisfying personal relationships. Remember: Not everyone needs the same amount of contact, and the quality of communication is almost certainly as important as the
 quantity. The important point here is that personal communication is essential for our *When you see this icon, look for an activity in the Student Resources section of the CD-ROM (included this book) that will help you understand and apply the concept you are reading about. * 9 xviii-031_Ch01_Adler 10 PART ONE 2/28/05 11:57 AM Page 10
 ELEMENTS OF COMMUNICATION well-being. To paraphrase an old song, "people who need people" aren't "the luckiest people in the world," they're the only way—we learn who we are. As you'll read in Chapter 2, our sense of identity comes
 from the way we interact with other people. Are we smart or stupid, attractive or ugly, skillful or inept? The answers to these questions don't come from looking in the mirror. We decide who we are based on how others react to us. Deprived of communication with others, we would have no sense of identity. In his book Bridges, Not Walls, John Stewart
 dramatically illustrates this fact by citing the case of the famous "Wild Boy of Aveyron," who spent his early childhood without any apparent human contact. The boy was discovered in January 1800 while digging for vegetables in a French village garden. He showed no behaviors one would expect in a social human. The boy could not speak but uttered
 only weird cries. More significant than this absence of social skills was his lack of any identity as a human being. As author Roger Shattuck put it, "The boy had no human sense of being in the world. He had no sense of himself as a person related to other persons." 10 Only after the influence of a loving "mother" did the boy begin to behave—and, we
 can imagine, think of himself as a human. Contemporary stories support the essential role that communication plays in shaping identity. In 1970, authorities discovered a twelve-year-old girl (whom they called "Genie") who had spent virtually all her life in an otherwise empty, darkened bedroom with almost no human contact. The child could not speak
 and had no sense of herself as a person until she was removed from her family and "nourished" by a team of caregivers.11 Like Genie and the boy of Aveyron, each of us enters the world with little or no sense of identity. We gain an idea of who we are from the ways others define us. As Chapter 2 explains, the messages we receive in early childhood
 are the strongest, but the influence of others continues throughout life. Chapter 2 also explains how we use communication to manage the way others view us. Some scholars have argued that we are most attracted to people who confirm our identity. 12 This confirmation can come in different forms, depending on the self-image of the communication.
 People with relatively high self-esteem seek out others who confirm their value and, as much as possible, avoid those who treat them badly. This principle offers one explanation for why some people maintain damaging or unsuccessful
 relationships. If you view yourself as a loser, you may associate with others who will confirm that self-perception. Of course, relationships can transform feelings of inadequacy into self-respect, and damaging ones can lower self-esteem. The role of communication in
 shaping identity works in a second way. Besides others' messages shaping who we think we are, the messages we create often are attempts to
 manage our identity. xviii-031 Ch01 Adler 2/28/05 11:57 AM Page 11 CHAPTER 1 HUMAN COMMUNICATION: WHAT AND WHY 11 Social Needs Besides helping to define who we are, communicating pleasure
 (e.g., "because it's fun,""to have a good time"); affection (e.g., "to help others," "to let others know I care"); inclusion (e.g., "because I makes me less lonely"); escape (e.g., "because I makes me less lonely"); and control (e.g., "because I want
 someone to do something for me,""to get something I don't have").13 As you look at this list of social needs for communicating, imagine how empty your life would be impossible to fulfill them without communicating with others. Because relationships with others are so vital, some theorists
 have gone as far as to argue that communication is the primary goal of human existence. Anthropologist Walter Goldschmidt terms the drive for meeting social needs as the "human career." 14 Practical Needs We shouldn't overlook the everyday, important functions that communication is the tool that lets us tell the hair stylist
 to take just a little off the sides, direct the doctor to where it hurts, and inform the plumber that the broken pipe needs attention now! Beyond these obvious needs, a wealth of research demonstrates that communication is an important key to effectiveness in a variety of everyday settings. For example, a survey of over four hundred employers
 identified "communication skills" as the top characteristic that employers seek in job candidates. 15 It was rated as more important than technical competence, work experience, or academic background. In another survey, over 90 percent of the personnel officials at five hundred U.S. businesses stated that increased communication skills are needed
 for success in the twenty-first century.16 Communication is just as important outside of work. College roommates who are both willing and able to communicate effectively report higher satisfaction with one another than do those who lack these characteristics.17 Married couples who were identified as effective communicators reported happier
 relationships than did less skillful husbands and wives.18 In school, the grade point averages of college students were related positively to their communication competence.19 In "getting acquainted" situations, communication competence.19 In "getting acquainted ac
 task of getting acquainted. 20 Whether the consequence of a mental attitude or a living condition, loneliness affects millions, usually for the worse. Death certificates read heart attack, cancer, or suicide; but coroners are missing the point. With no one to love us, we tend to smoke, drink, brood, or simply cry ourselves into earlier graves. Don
 E. Hamachek Encounters with Others xviii-031 Ch01 Adler 12 PART ONE 2/28/05 11:57 AM Page 12 ELEMENTS OF COMMUNICATION MODELING COMMUNICATION MODELING COMMUNICATION MODELING COMMUNICATION Model a basic definition of communication and seen the functions it performs. This information is useful, but it only begins to describe the process we will be
 examining throughout this book. One way to understand more about what it means to communicate is to look at some models that describe what happens when two or more people interact. As you will see, over the last half-century scholars have developed an increasingly accurate and sophisticated view of this process. A Linear Model Until about fifty
 years ago, researchers viewed communication as something that one person "does" to another.21 In this linear communication is like giving an injection: a sender encodes ideas and feelings into some sort of message and then conveys them to a receiver who decodes them. (Figure 1-1.) One important element of the linear
 model is the communication channel—the method by which a message is conveyed between people, face-to-face contact is the most familiar and obvious channel. Writing is another channel. In addition to these long-used forms, mediated communication channels include telephone, e-mail, instant messaging, faxes, voice mail, and even
 videoconferencing. (The word mediated reflects the fact that these messages are conveyed through some sort of communication medium.) The channel you choose can make a big difference in the effect of a message. For example, a typewritten love letter probably wouldn't have the same effect as a handwritten note or card. Likewise, ending a
 relationship by leaving a message on your ex-lover's answering machine would make a very different statement than delivering the bad news in person. Table 1-1 on page 13 and the Understanding Communication Technology box on page 14 show how some communications that have the
 best chance of success. The linear model also introduces the communication process. Three types of noise can disrupt communication—external, physiological, and psychological. Ex- Noise A A's 's
 Environment Encodes Sender Sender Noise Big 's Environment Message Channel(s) Decodes Channel(s) Decodes Channel(s) Noise Receiver Noise Rece
 Communication Channel Time Required for Feedback Amount of Information Conveyed Sender's Control Over How Message Is Composed Face-to-face Immediate (after contact established) Wocal, but not visual Moderate Less than in face-to-face setting Weakest Voice
 mail Delayed Vocal, but not visual Higher (since receiver can't interrupt) Low Weak E-mail Delayed Lowest (text only, no formatting) High Modest Weak Hard copy (e.g., handwritten or typed message) Delayed Words, numbers, and images, but no nonverbal cues Highest
 Low Good Control Over Receiver's Attention Effectiveness for Detailed Messages Adapted from R. B.Adler and J. M. Elmhorst, Communicating at Work: Principles and Practices for Business and the Professions, 8th ed. (New York: McGraw-Hill, 2005), pp. 32-33. ternal noise (also called "physical") includes those factors outside the receiver that make
 it difficult to hear, as well as many other kinds of distractions. For instance, too much cigarette smoke in a crowded room might make a speaker's remarks unclear. External noise can disrupt communication almost anywhere in our model—in the
 sender, channel, message, or receiver. Physiological noise involves biological factors in the receiver or sender that interfere with the ability to express or understand a message accurately. For instance, an outdoors person
 might exaggerate the size and number of the fish he caught in order to convince himself and others of his talents. In the same way, a student might become so upset upon learning that she would be unable (perhaps unwilling is a better word) to understand clearly where she went wrong. A linear model shows that communicator s
 often occupy dif ferent environments—fields of experience that help them understand others' behavior. In communication terminology, environment refers not only to a physical location but also to the personal experiences and cultural backgrounds that participants bring to a conversation. 13 xviii-031_Ch01_Adler 14 PART ONE 2/28/05 11:57 AM
 Page 14 ELEMENTS OF COMMUNICATION UNDERSTANDING COMMUNICATION TECHNOLOGY IM-ING: NOW IT'S ALL IN THE FAMILY Nina Gordon types out an instant message and sends it. The data travels some 500 miles, from the computer in her living room in Queens, N.Y., to America Online's servers in Northern Virginia, and then to her
 son Schuyler's computer, which just happens to be in the next room—about 20 feet away from where she is sitting, you hungry for dinner? After a little online banter over dining options, her son, a 17-year-old with a wicked sense of humor and no shortage of attitude, sends his request: an insty pizza and a beer don't push your luck, comes the reply.
 Although it might seem silly to send electronic messages instead of getting out of a chair and walking into the next room, some psychologists say that the role of instant messaging within families can be remarkably positive. In many cases, they say, the messages are helping to break down barriers between parents and their children. "Conversation
 between parents and teenagers could be highly emotional and not necessarily productive," says Elisheva F. Gross, a psychologist at the University of California at Los Angeles. When young people are online, however, "it's their turf," she says. "It may be a way for parents to communicate in a language and in a space that their children are more
 comfortable with." Teenagers already use online communications to take on difficult topics with one another, says Katelyn McKenna, a psychology professor at New York University. Preliminary results from a study she conducted last year, she says, suggest that "they are able to talk with one another about issues that bother them more readily online
 than when they are talking face-to-face." Lissa Parsonnet of Short Hills, N.J., says that her daughter, Dorrie, is sometimes more open to talking with her and her husband online about difficult subjects, like conflicts with friends, than she is in person. "She talks to us as if we're people, not parents," Parsonnet says. Parsonnet approach to talking with her and her husband online about difficult subjects, like conflicts with friends, than she is in person. "She talks to us as if we're people, not parents," Parsonnet says. Parsonnet sa
 that the online back channel strips away some of the parts of face-to-face communication that complicate matters: "They don't see you turning red," she says. "They don't see you turning red," she says a she sa
 of New York City, who says that electronic communications have helped strengthen her relationship with her father. "I can remember a few times when we've had little blowups and sent apology letters over e-mail," she says. While instant messages and e-mail may helpfully supplement face-to-face discussion, experts warn that it should not be relied
 on as the principal means of communication. "The question," says Sherry Turkle, a technology researcher at the Massachusetts Institute of Technology, "is whether you can use it constructively to bring it back to the face-to-face." John Schwartz Consider just some of the factors that might contribute to different environments:
 belong to one ethnic group and B to another; A might be rushed and B might be rushed and
 college students who have been enrolled in debate classes become more argumentative and verbally aggressive than those who have not been exposed to this environment. 22 xviii-031 Ch01 Adler 2/28/05 11:57 AM Page 15 CHAPTER 1 HUMAN COMMUNICATION: WHAT AND WHY Notice how the model in Figure 1-1 shows that the environments of
 A and B overlap. This area represents the background that the communicators must have in common. As the shared environment becomes smaller, communication becomes more difficult. 

B B Sosses who have trouble understanding the perspective of their
```

employees will be less effective managers, and workers who do not appreciate the challenges of being a boss are more likely to be uncooperative (and probably less suitable for advancement). Parents who have never known and may not appreciate the responsibility that comes with parenting. Members of a dominant culture who have never experienced how it feels to be "different" may not appreciate the concerns of people from nondominant cultures, whose own perspectives make it hard to understand the cultural blindness of the majority. Differing environments make understanding others challenging but certainly not impossible. Hard work and many of the skills described in this book provide ways to bridge the gap that separates all of us to a greater or lesser degree. For now, recognizing the challenge that it exists. A Transactional Model Despite its

```
simplicity, the linear model doesn't do a very good job of representing the way most communication operates. The transactional communication model in Figure 1-2 presents a more accurate picture in several respects. SIMULTANEOUS SENDING AND RECEIVING Although some types of mass communication do flow in a one-way, linear manner, most
types of personal communication are two-way exchanges.23 The transactional model reflects the fact that we usually send and receive messages simultaneously. The roles of sender and receive messages simultaneously.
and receives) Decodes Feedback Feedback Feedback Messages Channel(s) Noise Figure 1-2 Noise Communication Model Noise 15 xviii-031 Ch01 Adler 16 PART ONE 2/28/05 11:57 AM Page 16 ELEMENTS OF COMMUNICATION redefined as those of
 "communicators."This new term reflects the fact that at a given moment we are capable of receiving, decoding, and responding to ours. Consider, for instance, the significance of a friend's yawn as you describe your romantic problems. Or imagine the
blush you may see as you tell one of your raunchier jokes to a new acquaintance. Nonverbal behaviors like these show that most face-to-face communication is a two-way affair. The discernible response of a receiver to a sender's message is called feedback. Not all feedback is nonverbal, of course. Sometimes it is oral, as when you ask an instructor
questions about an upcoming test or volunteer your opinion of a friend's new haircut. In other cases it is written, as when you answer the questions on a midterm exam or respond to a letter from a friend. Figure 1-2 makes the importance of feedback clear. It shows that most communication is, indeed, a two-way affair. Another weakness of the
traditional linear model is the questionable assumption that all communication involves encoding. We certainly do choose symbols to convey most verbal messages. But what about the many nonverbal cues that occur whether or not people speak: facial expressions, gestures, postures, vocal tones, and so on? Cues like these clearly do offer information
about others, although they are often unconscious and thus don't involve encoding. For this reason, the transactional model replaces the term encodes with the broader term responds, because it describes both intentional and unintentional and unintentional and unintentional and unintentional and unintentional model replaces the term encodes with the broader term responds, because it describes both intentional and unintentional and unintentio
illustrating the simultaneous nature of face-to-face interaction, the example we just considered shows that it's difficult to isolate a single discrete "act" of communication from the events that precede and follow it. The way a friend or family member reacts to a sarcastic remark you make will probably depend on the way you have related to one another
in the past. Likewise, the way you'll act toward each other in the future depends on the outcome of this conversation. Research conducted on partners in romantic relationships are best conceived . . . as unfinished business."25 COMMUNICATION IS
RELATIONAL, NOT INDIVIDUAL The transactional model shows that communication is rather like dancing—at least the kind of dancing we do with partners. Like dancing, communication depends on the involvement of a partner. And like good
dancing, successful communication isn't something that depends just on the skill of one person. A great dancer who doesn't consider and adapt to the skill level of his or her partner can make both people look bad. In communication and dancing, even two talented partners don't guarantee success. When two talented dancers perform without
coordinating their movements, the results feel bad to the dancers and look foolish to an audience. Finally, relational communication—like dancing—is a unique creation that arises out of the way in which the partners interact. The way you dance probably varies from one partner to another because of its cooperative, transactional nature. Likewise, the
way you communicate almost certainly varies with different partners. 2/28/05 11:57 AM Page 17 CHAPTER 1 HUMAN COMMUNICATION: WHAT AND WHY Psychologist Kenneth Gergen captures the relational nature of communication well when he points out how our success depends on interaction with others. As he says,"... one cannot be
'attractive' without others who are attracted, a 'leader' without others willing to follow, or a 'loving person' without others to affirm with appreciation."26 Because communication is transactional, it's often a mistake to suggest that just one person is responsible for a relationship. Consider the accompanying cartoon. Both Cathy and Irving had good
intentions, and both probably could have handled the situation better. As the humorous outcome shows, trying to pin the blame for a disappointing outcome on one person or the other is fruitless and counterproductive. It would have been far better to ask, "How did we handle this situation poorly, and what can we do to make it better?" The
transactional nature of communication shows up in school, where teachers and students influence one another's behavior. For example, teachers who regard some students negatively may treat them with subtle or overt disfavor. As a result, these students are likely to react to their teachers' behavior negatively, which reinforces the teachers original
attitudes and expectations.27 It isn't necessary to resolve the "who started it"issue here to recognize that the behaviors of teachers and students are part of a transactional relationship. The transactional character of communication also figures dramatically in relationships between parents and their children. We normally think of "good parenting" as
a skill that some people possess and others lack. We judge the ability of a mother and father in terms of how well their children turn out. In truth, the question of good parenting isn't quite so clear. Research suggests that the quality of interaction between parents and children is a two-way affair, that children influence parents just as much as the
other way around.28 For example, children who engage in what social scientists call "problematic behavior" evoke more high-control responses from their parents than do cooperative children. By contrast, youngsters with mild temperaments are less likely to provoke coercive reactions by their parents than are more aggressive children. Parents with
low self-esteem tend to send more messages that weaken the self-esteem of their children, who in turn are likely to act in ways that make the parents and children shape one another's feelings and behavior. In cases like this it's at least difficult and probably
impossible to identify who is the "sender" and who is the "receiver" of messages. It's more accurate to acknowledge that parents and children—just like husbands and wives, bosses and employees, teachers and students, or any other people who communicate with one another—act in ways that mutually influence one another. The transactional na- 17

reemphasizing: We don't communicate to others, we communicate with them. By now you can see that a transactional model of communication should be more like a motion picture film than a gallery of still photographs. Although Figure 1-2 does a fair job of picturing the phenomenon we call communication, an animated version in which the
environments, communicators, and messages constantly change would be an even better way of capturing the process. COMMUNICATION COMPETENCE: WHAT MAKES AN EFFECTIVE COMMUNICATION communicators, and even easier to spot poor ones. But what are the characteristics that distinguish effective
communicators from their less successful counterparts? Answering this question has been one of the leading challenges for communication scholars, 29 Although all the answers aren't yet in, research has identified a great deal of important and useful information about communication competence. Source: CLOSE TO HOME © John McPherson
Reprinted with permission of UNIVERSAL PRESS SYNDICATE. All Rights Reserved. Communication competence isn't as easy as it might seem. Although scholars are still struggling to agree on a precise definition, most would agree that effective communication involves achieving one's goals in a manner
that, ideally, maintains or enhances the relationship in which it occurs.30 This definition may seem both vague and verbose, but a closer look shows that it suggests several important characteristics of communication styles can
be effective. Some very successful people are serious, whereas others are quiet; and some are gregarious, whereas others hint diplomatically. Just as there are many kinds of communication. The type of communication that succeeds in
one situation might be a colossal blunder in another. The joking insults you routinely trade with a friend might be insensitive and discouraging if he or she had just suffered a personal setback. The language you use with your peers might offend a family member, and last Saturday night's romantic approach would probably be out of place at work on
Monday morning. For this reason, being a competent communicator requires flexibility in understanding what approach is likely to work best in a given situation. 31 Cultural differences also illustrate the principle that there is no single model of competence. What qualifies xviii-031 Ch01 Adler 2/28/05 11:57 AM Page 19 CHAPTER 1 HUMAN
COMMUNICATION: WHAT AND WHY as competent behavior in one culture might be completely inept, or even offensive, in another.32 On an obvious level, customs like belching after a meal or appearing nude in public, which might be appropriate in some parts of the world, would be considered outrageous in others. But there are more subtle
differences in competent communication. For example, qualities like being selfdisclosing and speaking clearly that are valued in the United States are likely to be considered important.33 Even within a single society, members of various
cocultures may have different notions of appropriate behavior. One study revealed that ideas of how good friends should communicate varied from one ethnic group to another. As a group, Latinos valued relational support most highly, whereas African Americans valued relational support most highly, whereas African Americans valued relational support most highly, whereas African Americans valued respect and acceptance. As a group, Latinos valued relational support most highly, whereas African Americans valued relational support most highly whereas African American American
exchange of ideas, and Anglo Americans prized friends who recognized their needs as individuals. Findings like these mean that there can be no sure-fire list of rules or tips that will guarantee your success as a communicator. They also suggest that competent communicators are able to adapt their style to suit the individual and cultural preferences of
others.35 Because many behaviors can work in a given situation, it's a mistake to suggest that any single approach is superior to others. Throughout this book, you will be introduced to a variety of communication skills. Although all of them are likely to be effective at one time or another, they aren't meant to replace other approaches that you already
use. The skills you learn from this book will broaden your repertoire of choices about how to communicate. When you combine them with other approaches, you'll be likely to recognize a change for the better in your interactions with other approaches.
another, it's a mistake to think that communication competence is a trait that a person either possesses or lacks. It's more accurate to talk about degrees or areas of competence. 36 You and the people you know are probably quite competent in some areas and less so in others. You might deal quite skillfully with peers, for example, but feel clumsy
interacting with people much older or younger, wealthier or poorer, or more or less attractive than yourself. In fact, your competence with one person may vary from one situation to another. This means that it's an overgeneralization to say, "I didn't handle this
situation very well, even though I'm better in others." COMPETENCE IS RELATIONAL Because communication is transactional, something we do with others rather than to them, behavior that is competent in one relationship isn't necessarily competent in others. A fascinating study on relational satisfaction illustrates that what constitutes satisfying
communication varies from one relationship to another.37 Researchers Brent Burleson and Wendy Sampter hypothesized that people with sophisticated communication skills (such as managing conflict well, giving ego-support to others, and providing comfort to relational partners) would be better at maintaining friendships than would be less skilled
communicators. To their surprise, the results did not support this hypothesis. In fact, friendships were most satisfying when partners possessed matching skill levels. Apparently, relational satisfaction arises in part when our style matches those of the people with whom we interact. CULTURAL IDIOM sure-fire: certain to succeed 19 xviii
031_Ch01_Adler 20 PART ONE 2/28/05 11:57 AM Page 20 ELEMENTS OF COMMUNICATION UNDERSTANDING DIVERSITY FRONT PORCH ETIQUETTE IN LAKE WOBEGON In this excerpt from his book Lake Wobegon Days, Garrison Keillor explains one facet of small-town Minnesota etiquette. This section illustrates the degree to which
communication competence involves understanding unwritten rules, which often vary from one region or coculture to another. Even if you're screened from public view, it's up to them to stop or not. It's up to you to invite them in or not. The porch is a room of your house, not part of the yard. Only
peddlers or certain ministers would barge right in. 

If you say "Why don't you come up and sit for a bit?," it is customary for them to decline politely. If the invite to the house. Its terms are limited to a brief visit on the porch, no refreshments necessarily provided unless the
occupants have such at hand. When the host stands up and stretches or says, "You don't have to run, do you?," this is not a question but a pleasantry. Garrison Keillor The same principle holds true in the case of jealousy.
Researchers have uncovered a variety of ways by which people deal with jealousy in their relationships.38 The ways included keeping closer tabs on the partner, acting indifferent, decreasing affective or ineffective in every relationship. They
concluded that approaches that work with some people would be harmful to others. Findings like these demonstrate that competence arises out of developing ways of interacting that work for you and for the other people involved.39 CULTURAL IDIOM keeping closer tabs on: paying close attention to COMPETENCE CAN BE LEARNED To some
degree, biology is destiny when it comes to communication style. 40 Studies of identical and fraternal twins suggest that traits including sociability, anger, and relaxation seem to be partially a function of our genetic makeup. Fortunately, biology isn't the only factor that shapes how we communication is a set of skills that anyone can
learn. As children grow, their ability to communicate effectively develops. For example, older children can produce more sophisticated persuasive attempts than can younger ones. 41 Along with maturity, systematic education (such as the class in which you are now enrolled) can boost communicative communicative
produce dramatic results. After only thirty minutes of instruction, one group of observers became significantly more effective in detecting deception in interviews. 42 Even without systematic training, it's possible to develop communication skills through the processes of trial-and-error and observation. We learn from our own successes and failures, as
well as from observing other models—both positive and negative. One study revealed that the passage of time does lead to improved communication skill: College students' commu

of behaviors. To understand the importance of having a large communication repertoire, imagine that someone you know repeatedly tells jokes—perhaps discriminatory ones—that you find offensive. You could:
greater than the benefits. Ask a third party to say something to the joke teller about the offensiveness of the jokes. Hint at your friend's insensitivity, counting on humor to soften the blow of your criticism. Express your discomfort in a straightforward way, asking your friend to
stop telling the offensive jokes, at least around you. Simply demand that your friend stop. With this choice of responses at your disposal (and you can probably think of others as well), you could pick the one that had the best chance of success. But if you were able to use only one or two of these responses when raising a delicate issue—always keeping
quiet or always hinting, for example—your chances of success would be much smaller. Indeed, many poor communicators are easy to spot by their limited range of responses. Some are chronic jokers. Others are always belligerent. Still others are easy to spot by their limited range of responses. Some are chronic jokers. Others are always belligerent. Still others are always belligerent. Still others are always belligerent. Still others are easy to spot by their limited range of responses.
only a few dishes, these people are forced to rely on a small range of responses again and again, whether or not they are successful. ABILITY TO CHOOSE THE MOST APPROPRIATE BEHAVIOR Simply possessing a large array of communication skills isn't a guarantee of effectiveness. It's also necessary to know which of these skills will work best in a
particular situation. Choosing the best way to send a message is rather like choosing a gift: What is appropriate for one person won't be appropriate for another one at all. This ability to choose the best appropriate for another one at all. This ability to choose the best appropriate for one person won't be appropriate for another one at all. how to act in every situation, there are at least three factors to consider when you are deciding which response to choose: the context, your goal, and the other person. SKILL AT PERFORMING BEHAVIORS After you have chosen the most appropriate way to communicate, it's still necessary to perform the required skills effectively. There is a big
difference between knowing about a skill and being abo
ONE 2/28/05 11:57 AM Page 22 ELEMENTS OF COMMUNICATION I witnessed recently a striking and barely believable example of such [inappropriate] behavior at a wedding ceremony. One of the guests said loud enough for those of us on my side of the chapel to hear, "Think it through, Jerry" just at the point where the rabbi had asked Jerry if he
took this woman to be his lawful wedded wife, according to (no less) the laws of Moses and Israel. So far as I could tell, the wedding guest was not drunk or embittered. He merely mistook the synagogue for Shea Stadium . . . Neil Postman Crazy Talk, Stupid Talk Just reading about communication skills in the following chapters won't guarantee that
you can start using them flawlessly. As with any other skills—playing a musical instrument or learning a sport, for example—the road to competence in communication is not a short one. You can expect that your first efforts at communicating differently will be awkward. After some practice you will become more skillful, although you will still have to
think about the new way of speaking or listening. Finally, after repeating the new skill again and again, you will find you can perform it without conscious thought. EMPATHY/PERSPECTIVE TAKING People have the best chance of developing an effective message when they understand the other person's point of view. And because others aren't always
good at expressing their thoughts and feelings clearly, the ability to imagine how an issue might look from the other's perspective suggests one reason why listening is so important. Not only does it help us understand others, but also it gives us information to develop strategies about
how to best influence them. Because empathy is such an important element of communicative complexity is the ability to construct a variety of frameworks for viewing an issue. Cognitive complexity is an ingredient of communication competence because it
allows us to make sense of people using a variety of perspectives. For instance, imagine that a longtime friend is offended by something you've done. Another possibility is that something upsetting has happened in another part of your friend's life. Or perhaps nothing at all is
wrong, and you're just being overly sensitive. Researchers have found that the ability to analyze the behavior of others in a variety of ways leads to greater "conversational sensitivity," increasing the chances of acting in ways that will produce satisfying results.44 SELF-MONITORING Psychologists use the term self-monitoring to describe the process.
of paying close attention to one's behavior and using these observations to shape the way one behaves. Self-monitors are able to separate a part of their consciousness and observe their behavior from a detached viewpoint, making observations such as: "I'm making a fool out of myself." "I'd better speak up now." "This approach is working well. I'll
keep it up." Source: CALVIN and HOBBES © 1994 Watterson. Distributed by UNIVERSAL PRESS SYNDICATE. Reprinted with permission. office building, two dozen young Indians are studying the customs of a place none of them has ever seen. One by one, the students present their conclusions about this fabled land. "Americans eat a lot of junk food. Table manners are very casual," says Ritu Khanna. "People are quite self-centered. The average American has 13 credit cards," says
Nerissa Dcosta. "Seventy-six percent of the people mistrust the government. In the near future, this figure is expected to go up to 100 percent," says Sunny Trama. The Indians, who range in age from 20 to 27, have been hired to take calls from cranky or distraught Americans whose computers have gone haywire. To do this, they need to communicate
in a language that is familiar but a culture that is foreign. "We're not saying India is better or America is better," says their trainer, Alefiya Rangwala. "We just want to be culturally sensitive so there's no disconnect when someone phones for tech support." Call centers took root here during the 2001 recession, when U.S. companies were struggling to
control expenses. By firing American customer service workers and hiring Indians, the firms slashed their labor costs by 75%. At first, training was simple. The centers gave employees names that were acceptable to American ears, with Arjun becoming Susan. The new hires were instructed to watch "Friends" and "Ally
McBeal" to get an idea of American folkways. But whether Aaron and Susan were repairing computers, selling long-distance service or fulfilling orders for diet tapes, problems immediately cropped up. The American callers often wanted a better deal or an impossibly swift resolution and were aggressive and sometimes abrasive about saying so. The
Indians responded according to their own deepest natures: They were silent when they didn't understand, and they often committed to more than their employers could deliver. They would tell the Americans that someone would get back to them tomorrow to check on their problems, and no one would. Customer satisfaction plummeted. The U.S.
clients grew alarmed. Some even returned their business to U.S. call centers. Realizing that a new multibillion-dollar industry with 150,000 employees was at risk, Indian call centers have recently embarked on much more comprehensive training. New hires are taught how to express empathy, strategies to successfully open and close conversations
and above all how to be assertive, however unnatural it might feel. "We like to please," says Aparajita Ajit, whose title is "head of talent transformation" for the call-center firm Mphasis. "It's very difficult for us to say no." Originally, the ever-agreeable Indian agents had a hard time getting people to pay bills that were six months overdue. Too often,
says trainer Deepa Nagraj, the calls would go like this: "Hi," the Indian would say. "I'd like to set up a payment to get your account current. Can I help you do that?" "No," the American responds. "OK, let me know if you change your mind," the Indian says and hangs up. Now, says Nagraj, the agents take no excuses. David Streitfeld Chapter 2
explains how too much self-monitoring can be problematic. Still, people who are aware of their behavior and the impression it makes are more accurate in judging others' emotional states, better at remembering information about others, less shy, and more
experimental subjects who scored in the lowest quartile on joke-telling skill were more likely than their funnier counterparts to grossly overestimate their sense of humor. 23 xviii-031 Ch01_Adler 24 PART ONE 2/28/05 11:57 AM Page 24 ELEMENTS OF COMMUNICATION COMMITMENT TO THE RELATIONSHIP One feature that distinguishes
effective communication in almost any context is commitment. People who seem to care about the relationship communicate better than those who don't.47 This concern shows up in commitment to the other person and to the message you are expressing. CLARIFYING MISCONCEPTIONS ABOUT COMMUNICATION Having spent time talking about
what communication is, we ought to also identify some things it is not.48 Recognizing some misconceptions is important, not only because following them can get you into trouble. Communication Does Not Always Require Complete Understanding Most people about the subject, but also because following them can get you into trouble.
operate on the implicit but flawed assumption that the goal of all communication is to maximize understanding between communication in which understanding as we usually conceive it isn't the primary goal.49 Consider,
for example: Social rituals. "How's it going?" you ask. "Great," the other person replies. The primary goal in exchange information. Many attempts to influence others. A guick analysis of most television commercials shows that they are aimed at persuading
viewers to buy products, not to understand the content of the commercial. In the same way, many of our attempts at persuading another to act as we want don't involve a desire to get the other person to understand what we want—just to comply with our wishes. When you decline an unwanted invitation by saying "I can't make it,"you probably want to create the impression that the decision is really beyond your control. (If your goal was to be
term coordination has been used to describe situations in which participants interact smoothly, with a high degree of satisfaction but without understanding can be satisfying in far more important situations. Consider the words "I love you." This is a phrase that can have many
meanings: Among other things, it can mean, "I desire you," "I feel great affection for you," "I desire you," "I feel guilty," "I want you to be faithful to me," or even "I hope you love me." 51 It's not hard to picture a situation in which partners gain great satisfaction—even over a lifetime—without completely understanding that the
mutual love they profess actually is quite different for each of them. The cartoon on the previous page reflects the fact that better understanding can sometimes lead to less satisfaction. "You mean you mostly love me because I've been there for you? Hey, a dog is there for you!" At the conversational level, some scholars have compared coordinated
communication to what musicians call "jamming." 52 In this sort of musicians call "jamming in several respects: 🔳 🔳 🗖 Coordination is more
important than understanding. The players in a jam session gain satisfaction from making music together. In coordinated conversations, satisfaction comes principally from being together—laughing, joking, exchanging confidences, and telling stories. The act of
the content of one another's messages, but they do understand how to behave with one another. Everyone gets to solo. In jamming, each member gets a time to take the lead, with others following. Conversations work only when the participants engage in turn-taking, giving each other time to talk. Sessions go to new places. In musical jamming, every
session is unique. Likewise, no two conversations are identical in words or tone. One person's decision about what to say and how to say it triggers the other's response, which in turn results in a unique reaction. The communication is truly transactional, as described earlier. Jamming builds rapport. Musicians who jam with one another build unspoken
bonds. In the same way, communicators who converse smoothly with one another feel a connection—even if the topic isn't very important or the participants don't completely understand one another feel a connection—even if the topic isn't very important or the participants don't completely understand one another feel a connection—even if the topic isn't very important or the participants don't completely understand one another feel a connection—even if the topic isn't very important or the participants don't completely understand one another feel a connection—even if the topic isn't very important or the participants don't completely understand one another feel a connection—even if the topic isn't very important or the participants don't completely understand one another feel a connection—even if the topic isn't very important or the participants don't completely understand one another feel a connection—even if the topic isn't very important or the participants don't completely understand one another feel a connection—even if the topic isn't very important or the participants don't completely understand one another feel a connection—even if the topic isn't very important or the participants don't completely understand one another feel a connection—even if the topic isn't very important or the participant of the participant o
COMMUNICATION Communication Is Not Always a Good Thing For most people, belief in the value of communication is neither good nor bad in itself. Rather, its value comes from the way it is used. In this sense, communication is similar to
fire:Flames in the fireplace on a cold night keep you warm and create a cozy atmosphere, but the same flames can kill if they spread into the room. Communication can be a tool for expressing warm feelings and useful facts, but under different circumstances the same words and actions can cause both physical and emotional pain. No Single Person or
Event Causes Another's Reaction Although communicative skill can often make the difference between pleasant and unpleasant outcomes, it's a mistake to suggest that any single situation. Suppose, for example, that you lose your
temper and say something to a friend that you regret as soon as the words escape your lips. Your friend's reaction will depend on a whole host of events besides your unjustified remark: her frame of mind at the moment (uptight or mellow), elements of her personality (judgmental or forgiving), your relational history (supportive or hostile), and her
knowledge of any factors in your life that might have contributed to your unfair remark. Because communication will Not Solve All Problems "If I could just communicate better . . ." is the sad refrain of many unhappy
people who believe that if they could just express themselves better, their relationships would improve. Though this is sometimes true, it's an exaggeration to say that communicating—even communicating—even communicating—even communicating—even communicating clearly—is a guaranteed panacea. Meanings Rest in People, Not Words We hinted that meanings rest in people, not in words, when we said earlier
that the symbols we use to communicate are arbitrary. It's a mistake to think that, just because you use a word in one way, others will do so, too.54 Sometimes differing interpretations of symbols are easily caught, as when we might first take the statement "He's loaded" to mean the subject has had too much to drink, only to find out that he is quite
wealthy. In other cases, however, the ambiguity of words and nonverbal behaviors isn't so apparent, and thus has more farreaching consequences. Remember, for instance, a time when someone said to you, "I'll be honest," and only later did you learn that those words hid precisely the opposite fact. In Chapter 3 you'll read a great deal more about the
problems that come from mistakenly assuming that meanings rest in words. Communication Is Not Simple Most people assume that communication is an aptitude that people develop without the need for training—rather like breathing. After all, we've been swapping xviii-031_Ch01_Adler 2/28/05 11:57 AM Page 27 CHAPTER 1 HUMAN
COMMUNICATION: WHAT AND WHY ideas with one another since early childhood, and there are lots of people who communicate pretty well without ever having had a class on the subject. Though this picture of communication as a natural ability seems accurate, it's actually a gross oversimplification.55 Throughout history there have been cases of
infants raised without human contact. In all these cases the children were initially unable to communicate with others when brought into society. Only after extensive teaching (and not even then in some cases) were they able to speak and understand language in ways we take for granted. But what about the more common cases of effective
communicators who have had no formal training yet are skillful at creating and understanding messages? The answer to this question lies in the fact that not all education occurs in a classroom: Many people learn to communicate skillfully because they have been exposed to models of such behavior by those around them. This principle of modeling
explains why children who grow up in homes with stable relationships between family members have a greater chance of developing such relationships themselves. They know how to do so because they've seen effective communication in action. Does the existence of these good communicators mean that certain people don't need courses like the ones are considered as a greater chance of these good communicators mean that certain people don't need courses like the ones are considered as a greater chance of these good communicators mean that certain people don't need courses like the ones are considered as a greater chance of these good communicators mean that certain people don't need courses like the ones are considered as a greater chance of these good communicators mean that certain people don't need courses like the ones are considered as a greater chance of the considered as a greater chance of the
you're taking? Hardly. Even the best communicators aren't perfect: They often suffer the frustration of being unable to get a message across effectively, and they frequently misunderstand others. Furthermore, even the most successful people you know can probably identify ways in which their relationships could profit by better communication. These across effectively, and they frequently misunderstand others.
facts show that communication skills are rather like athletic ability: Even the most inept of us can learn to be more effective with training and practice, and those who are talented can always become better. 27 CULTURAL IDIOM take for granted: give little thought to Although it's certainly true that not communicating enough is a mistake, there are
also situations when too much communication is a mistake. Sometimes excessive communication simply is unproductive, as when we "talk a problem to death," going over the same ground again and again without making any headway. And there are times when too much communication is a mistake. Sometimes excessive communication simply is unproductive, as when we "talk a problem to death," going over the same ground again and again without making any headway.
"talking ourselves into a hole"—making a bad situation worse by pursuing it too far. As McCroskey and Wheeless put it,"More and more negative communication is the best course. Any good salesperson will tell you that it's often best to stop talking and more negative results."56 There are even times when no communication merely leads to more and more negative results."56 There are even times when no communication is the best course. Any good salesperson will tell you that it's often best to stop talking and the communication merely leads to more and more negative results."56 There are even times when no communication is the best course.
let the customer think about the product. And when two people are angry and hurt, they may say things they don't mean and will later regret. At times like these it's probably best to spend a little time cooling off, thinking about what to say and how to say it. One key to successful communication, then, is to share an adequate amount of information in a
skillful manner. Teaching you how to decide what information is adequate and what constitutes skillful behavior is one major goal of this book. Source: © The New Yorker Collection 1986 Gahan Wilson from cartoonbank.com. All Rights Reserved. More Communication Is Not Always Better xviii-031_Ch01_Adler 28 PART ONE 2/28/05 11:57 AM Page 28
ELEMENTS OF COMMUNICATION ETHICAL CHALLENGE TO COMMUNICATE OR NOT TO COMMUNICATE? The explanations on pages 24-27 make it clear that communication is not a panacea. Explaining yourself and understanding others will not solve all problems; in fact, sometimes more communication leads to more problems. Think of an
occasion (real or hypothetical) where more interaction would make matters worse. Imagine that the other person (or people) involved in this situation will deteriorate, yet you don't want to appear uncooperative. What should you
do? SUMMARY This chapter began by defining communication as it will be examined in Understanding Human Communication: the process of human beings responding to the symbolic behavior of other persons. It introduced four communication the process of human beings responding to the symbolic behavior of other persons. It introduced four communication the process of human beings responding to the symbolic behavior of other persons. It introduced four communication the process of human beings responding to the symbolic behavior of other persons. It introduced four communication the process of human beings responding to the symbolic behavior of other persons.
chapter also identified several types of needs that communication satisfies: physical, identity, social, and practical. A linear and a transactional model in representing the process-oriented nature of human interaction. The chapter went on to explore the
difference between effective and ineffective exchanges by discussing communication competence, showing that there is no single correct way to behave and that competence are described as being able to choose and perform appropriately from a wide range of
behaviors, as being cognitively complex self-monitors who can take the perspective of others and who have communication is, the chapter talking about what it is not by refuting several common misconceptions. It demonstrated that
communication doesn't always require complete understanding and that it is not always a good thing that will solve every problem. It showed that more communication is not always better; that meanings are in people, not in words; and that more communication is not always better; that meanings are in people, not in words; and that more communication is not always better; that meanings are in people, not in words; and that more communication is not always better; that meanings are in people, not in words; and that more communication is not always better; that meanings are in people, not in words; and that more communication is not always better; that meanings are in people, not in words; and that more communication is not always better; that meanings are in people, not in words; and that more communication is not always better; that meanings are in people, not in words; and that more communication is not always better; that meanings are in people, not in words; and that more communication is not always better; that meanings are in people, not in words; and that more communication is not always better; that meanings are in people, not in words; and that more communication is not always better; that meanings are in people, not in words; and that more communication is not always better; that meanings are in people, not in words; and that more communication is not always better.

Mawah, NJ: Erlbaum, 2000. Separate chapters describe the body of research and theorizing on communication technologies. Stiebel, David. When Talking Makes Things Worse! Resolving Problems When Communication Fails. Kansas City, MO: Andrews and McMeel, 1997. The author offers many examples from
his experience as advisor to Fortune 500 companies, showing how even clear communication can create problems instead of solving them. Stiebel goes on to offer guidelines for deciding when talking will only make matters worse. The story of a boy who grew up alone in the French woods, as a wild animal might, after being abandoned in early
childhood. The film's director, Francois Truffaut, cast himself as the doctor who works with the boy to give him a sense of human identity—a self-concept—and the ability to communicate. Based closely on the true case discussed on page 10. The Importance of Communication Cast Away (2000). Rated PG. Chuck Noland (Tom Hanks) is a hard-driving
executive who is the only survivor of a plane crash. Stranded for what may be the rest of his life on an otherwise uninhabited Pacific island, he creates a "company that made the volleyball". Even though Chuck is hungry, thirsty, sunbaked
and in physical pain, he retains his will to go on because he keeps talking and "interacting" to meet his communication—and for Chuck, communication with something was better than communicating with no one. It also may have saved his life
xviii-031 Ch01 Adler 2/28/05 11:57 AM Page 31 CHAPTER 1 Communication as a Transactional Process Parenthood (1989). Rated PG-13. This serious, hilarious, poignant, chaotic film looks into the lives of a four-generation family, the mood of which is captured perfectly by the grandmother, who characterizes it as a roller-coaster ride—full of
exhilarating highs and gut-wrenching plunges. We see how the life of each character is affected by the actions of the others. By the end of the film it is clear that communication is truly something we do with others, not to them. Misconceptions About
threatens their young daughter. Alice checks into a rehabilitation program where she learns about the importance of dealing with issues she has been drowning in alcohol. Alice's new understanding and her honest disclosure threaten her relationship with Michael, who, we discover, has unintentionally supported Alice's habit in order to maintain a
facade of normality. The more Alice and Michael talk, the worse things get between them. After weeks of expressing hurt and anger, they decide to separate. By the film's end, however, Michael acknowledges that they need different, not more, communication. 032-073_Ch02_Adler 2/28/05 9:38 AM Page 32 AFTER STUDYING THE MATERIAL IN THIS
How the process of identity management can result in presentation of multiple selves. 7. The reasons for and the ethical dimensions of identity management. You should be able to: 1. Identify how the perception checking and empathy to
be more accurate in your perceptions of others' behavior. 3. Identify the ways you influence the selfconcepts of others and the ways significant others influence your selfconcept. 4. Identify the communication-related self-fulfilling prophecies that you have imposed on your, and that you have imposed on others. 5.
Describe the various identities you attempt to create and the ethical merit of your identity management strategies. 032-073_Ch02_Adler 2/28/05 9:38 AM Page 33 CHAPTER HIGHLIGHTS Our perceptions of others shape the way we communicate with them. Several factors influence these perceptions of others shape the way we communicate with them.
through communication. 🔳 Our tendency to make several perceptions, leading to a shared narrative and from our empathize. The skill of perception checking can help clarify mistaken perceptions, leading to a shared narrative and smoother

either more-satisfying or less-productive communication. As Chapter 1 explained, one reason we communicate is to persuade others to view ourselves as we want to be seen. To understand how this principle of identity management operates, Chapter 2 explains 🔳 The difference between perceived and presenting selves. 🔳 How we communicate to
manage our identities, both via face-to-face and mediated channels. 

Reasons why we communicate to manage our identities. CHAPTER TWO Perception, the Self, and Communication 032-073 Ch02_Adler 34 PART ONE 2/28/05 9:38 AM Page 34 ELEMENTS OF COMMUNICATION CULTURAL IDIOM 

Reasons why we communicate to manage our identities. CHAPTER TWO Perception, the Self, and Communicate to manage our identities.
speaking for a long time jibe: agree Two classmates, one black and the other white, are discussing their latest reading assignment in an American history class. "Malcolm X was guite a guy," the white student says sincerely to the black one. "You must be very proud of him." The black student is offended at what sounds like a condescending
remark. A student is practicing his first speech for a public address class with several friends. "This is a stupid topic," he laments. The others assure him that the topic is interesting and that the speech sounds good. Later in class he becomes flustered because he believes that his speech is awful. As a result of his unenthusiastic delivery, the student
receives a low grade on the assignment. In biology class, a shy but earnest student mistakenly uses the term organism when answering the professor's question. The entire class breaks into raucous laughter. The student mistakenly uses the term organism when answering the professor's question. The entire class breaks into raucous laughter. The student mistakenly uses the term organism when answering the professor's question.
look and sound confident in a job interview. Although she leaves the session convinced she botched a big chance, a few days later she is surprised to receive a job offer. Stories like these probably sound familiar. Yet behind this familiarity lie principles that affect our communication more than almost any others discussed in this book.
more people often perceive the world in radically different ways, which presents major challenges for successful communication. The beliefs each of us holds about ourselves—our self-concepts and thus influence their communication
The image we present to the world varies from one situation to another. These simple truths by describing the nature of perception and showing how it influences the way we view ourselves and how we
relate to others. PERCEIVING OTHERS Suppose you woke up tomorrow in another person's body. Imagine how different the world would seem if you were fifteen years older or younger, a member of the opposite sex or a different the world would seem if you were fifteen years older or younger, a member of the opposite sex or a different the world would seem if you were fifteen years older or younger, a member of the opposite sex or a different the world would seem if you were fifteen years older or younger, a member of the opposite sex or a different ethnic group, far more wealthy or poverty-stricken. It doesn't take
much imagination to understand that the world feels like a different place to each of us, depending on our physical condition as well as our social and personal backgrounds. Narratives and Perception We all have our own story of the world, and often our story is quite different from those of others. A family member or roommate might think your sense
of humor is inappropriate, whereas you think you're guite clever. You might blame an unsatisfying class on the professor, who you think is a long-winded bore. On the other hand, the professor might characterize the students as superficial and lazy 032-073. Ch02. Adler 2/28/05 9:38 AM Page 35 CHAPTER 2 PERCEPTION, THE SELF, AND
COMMUNICATION "I know what you're thinking, but let me offer a competing narrative." Source: ©The New Yorker Collection 2004 Harry Bliss from cartoonbank.com. All Rights Reserved. and blame the class environment on them. (Chapter 3 will talk about the sort of name-calling embedded in the previous sentences.) Social scientists call the
personal stories that we and others create to make sense of our personal world narratives. For now, though, the important point is that differing narratives can lead to problematic communication. After they take hold,
narratives offer a framework for explaining behavior and shaping future communication. One study of sense making in organizations illustrates how the process operates on the job.2 Researchers located employees who had participated in office discussions about cases where a fellow worker had received "differential treatment" from management
about matters such as time off, pay, or work assignments. The researchers then analyzed the conversations were the occasion in which workers created and reinforced the meaning of the employee's behavior and management's
response. For example, consider the way workers made sense of Jane Doe's habit of taking late lunches aren't a big deal. Either way, the coworker's narrative of office events defines those events. Once they are defined,
coworkers tend to seek reinforcement for their perceptions by keeping a mental scorecard rating their fellow employees and management. ("Did you notice that Bob came in late again today?""Did you notice that the boss chose Jane to go on that trip to New York?") Although most of us like to think we make judgments about others on our own, this
research suggests that sense making is an interactive process. In other words, reality in the workplace and elsewhere isn't "out there";rather, we create it with others through communication. 35 032-073 Ch02 Adler 36 PART ONE 2/28/05 9:38 AM Page 36 ELEMENTS OF COMMUNICATION CULTURAL IDIOM yardsticks: standards of comparison
botch: destroy, ruin lashes out: attacks with words blow off steam: release excess energy or anger Research on long-term happy marriages demonstrates that shared narratives don't have to be accurate to be powerful. 3 Couples who report being happily marriages demonstrates that shared narratives don't have to be accurate to be powerful. 3 Couples who report being happily marriages demonstrates that shared narratives don't have to be accurate to be powerful. 3 Couples who report being happily marriages demonstrates that shared narratives don't have to be accurate to be powerful. 3 Couples who report being happily marriages demonstrates that shared narratives don't have to be accurate to be powerful. 3 Couples who report being happily marriages demonstrates that shared narratives don't have to be accurate to be powerful. 3 Couples who report being happily marriages demonstrates that shared narratives don't have to be accurate to be powerful. 3 Couples who report being happily marriages demonstrates that shared narratives don't have to be accurate to be powerful. 3 Couples who report being happily marriages demonstrates that shared narratives don't have to be accurate to be powerful. 3 Couples who report being happily marriages demonstrates that shared narratives don't have to be accurate to be powerful. 3 Couples who report happily marriages demonstrates that shared narratives don't have to be accurate to be powerful. 3 Couples who report has a couple of the couple
with the facts. They agree that they rarely have conflict, although objective analysis reveals that they have had their share of disagreements and challenges. Without overtly agreeing to do so, they choose to blame outside forces or unusual circumstances for problems instead of attributing responsibility to one another. They offer the most charitable
interpretations of one another's behavior, believing that their spouse acts with good intentions when things don't go well. They seem willing to forgive, or even forget, transgressions. Examining this research, one scholar concludes: Should we conclude that happy couples have a poor grip on reality? Perhaps they do, but is the reality of one's marriage to forgive, or even forget, transgressions.
better known by outside onlookers than by the players themselves? The conclusion is evident. One key to a long happy marriage is to tell yourself and others that you have one and then to behave as though you do!4 Common Perceptual Tendencies Shared narratives may be desirable, but they can be hard to achieve. Some of the biggest problems that
interfere with understanding and agreement arise from errors in what psychologists call attribution—the process of attaching meaning to behavior. We attribute meaning to behavi
—and to troublesome communication. 5 By becoming aware of these errors, we can guard against them and avoid unnecessary conflicts. WE OFTEN JUDGE OURSELVES MORE CHARITABLY THAN WE JUDGE OURSELVES more communication. 5 By becoming aware of these errors, we can guard against them and avoid unnecessary conflicts. WE offen judge ourselves in the
most generous terms possible. Social scientists have labeled this tendency the self-serving bias. 6 When others suffer, we often blame the problem on their personal qualities. On the other hand, when we suffer, we find explanations outside ourselves. Consider a few examples:
trying hard enough; when we botch a job, the problem was unclear directions or not enough time. When he lashes out angrily, we say he's being moody or too sensitive; when we get caught, we deny we
were driving too fast or say, "Everybody does it." The egocentric tendency to rate ourselves more favorably than others see us has been demonstrated experimentally. In one study, members of a random sample of men were asked to rank themselves on their ability to get along with others. Defying mathematical laws, all subjects—every last one—
put themselves in the top half of the population. Sixty percent rated themselves in the top 10 percent of the population, and an amazing 25 percent believed they were in 032-073 Ch02 Adler 2/28/05 9:38 AM Page 37 CHAPTER 2 PERCEPTION, THE SELF, AND COMMUNICATION the top 1 percent. In the same study, 70 percent of the men ranked
their leadership in the top 25 percent of the population, whereas only 2 percent thought they were below average. Sixty percent in athletic abilities, whereas only 6 percent thought they were in the top 25 percent in athletic abilities, whereas only 6 percent viewed themselves as below average. Evidence like this suggests how uncharitable attitudes toward others can affect communication. Your
harsh opinions of others can lead to judgmental messages, and self-serving defenses of your own actions can result in a defensive response when others question your behavior. WE ARE INFLUENCED BY WHAT IS MOST OBVIOUS Every time we encounter another person, we are bombarded with more information than we can possibly manage. You
can appreciate this by spending two or three minutes just reporting on what you can observe about another person through your five senses. ("Now I see you blinking your eyes . . . Now I notice you're wearing a red shirt . . .") You will find that the list seems almost endless and that
every time you seem to near the end, a new observation presents itself. Faced with this tidal wave of sense data, we need to whittle down the amount of information we will use to make sense of others. There are three factors that cause us to notice some messages and ignore others. For example, we pay attention to stimuli that are intense (loud
music, brightly dressed people), repetitious (dripping faucets, persistent people), or contrastive (a normally happy person who acts grumpy or vice versa). Motives also determine what information we select from our environment. If you're hungry, you'll
become aware of any restaurants, markets, and billboards advertising food in your path. Motives also determine how we perceive people. For example, someone on the lookout for a romantic adventure will be especially aware of attractive potential partners, whereas the same person at a different time might be oblivious to anyone but police or
medical personnel in an emergency. If intense, repetitious, or contrastive information were the most important thing to know about others, there would be no problem. But the most important. For example:
one who lashes out first. Perhaps the other one was at least equally responsible, by teasing or refusing to cooperate. You might blame an acquaintance whose malicious gossiping or arguing has become a bother, forgetting that, by previously tolerating that kind of behavior, you have been at least equally responsible. You might blame an
unhappy working situation on the boss, overlooking other factors beyond her control such as a change in the economy, the policy of higher management, or demands of customers or other workers. WE CLING TO FIRST IMPRESSIONS, EVEN IF WRONG Labeling people according to our first impressions is an inevitable part of the perception
process. These labels are a way of making interpretations. "She seems cheerful." "He seems sincere." "They sound awfully conceited." 37 032-073 Ch02 Adler 38 PART ONE 2/28/05 9:38 AM Page 38 ELEMENTS OF COMMUNICATION CULTURAL IDIOM off-base: a mistake a front: a pretense If they're accurate, impressions like these can be useful
ways of deciding how to respond best to people in the future. Problems arise, however, when the labels we attach are inaccurate, because after we form an opinion of someone, we tend to hang on to it and make any conflicting information fit our image. Suppose, for instance, you mention the name of your new neighbor to a friend. "Oh, I know him," your
friend replies. "He seems nice at first, but it's all an act." Perhaps this appraisal is off-base. The neighbor may have changed since your friend's evaluation, it will probably influence the way you respond to the neighbor
You'll look for examples of the insincerity you've heard about—and you'll probably find them. Even if the neighbor were a saint, you would be likely to interpret his behavior in ways that fit your expectations. "Sure he seems nice," you might think, "but it's probably just a front." Of course, this sort of suspicion can create a self-fulfilling prophecy,
transforming a genuinely nice person into someone who truly becomes an undesirable neighbor as he reacts to your suspicious behavior. Given the almost unavoidable tendency to form first impressions, the best advice we can offer is to keep an open mind and be willing to change your opinion as events prove that the first impressions were mistaken
WE TEND TO ASSUME THAT OTHERS ARE SIMILAR TO US People with low self-esteem imagine that others view them unfavorably, whereas people who like themselves imagine that others like them, too.9 The frequently
mistaken assumption that others' views are similar to our own applies in a wide range of situations. For example: You've heard a raunchy joke that you found funny. You might assume that it won't offend a somewhat conservative friend. It does. 032-073_Ch02_Adler 2/28/05 9:38 AM Page 39 CHAPTER 2 PERCEPTION, THE SELF, AND
COMMUNICATION You've been bothered by an instructor's tendency to get off the subject during lectures. If you were a professor, you'd want to know if anything you were doing was creating problems for your students, so you decide that your instructor will probably be grateful for some constructive criticism. Unfortunately, you're wrong. You lost
your temper with a friend a week ago and said some things you regret. In fact, if someone said those things to you, you would consider the relationship finished. Imagining that your friend feels that he was partly responsible and has avoided you because he thinks you're the one who
wants to end things. 39 CULTURAL IDIOM putting others down: degrading others Examples like these show that others don't always think or feel the way we do and that assuming that similarities exist can lead to problems. For example, one study revealed that men evaluate women who initiate first dates as being more interested in sex than do the
women who initiated the dates. 10 How can you find out the other person's real position? Sometimes by asking directly, sometimes by checking with others, and sometimes by making an educated quess after you've thought the matter out. All these alternatives are better than simply assuming that everyone would react the way you do. WE TEND TO
FAVOR NEGATIVE IMPRESSIONS OVER POSITIVE ONES What do you think about Harvey? He's handsome, hardworking, intelligent, and honest. He's also very conceited. Did the last quality mentioned make a difference in your evaluation? If it did, you're not alone. Research shows that when people are aware of both the positive and negative traits of
another, they tend to be more influenced by the negative traits. In one study, for example, researchers found that job interviewers were likely to reject candidates who revealed negative traits. In one study, for example, researchers found that job interviewers were likely to reject candidates who revealed negative traits. In one study, for example, researchers found that job interviewers were likely to reject candidates who revealed negative traits.
positive ones, you'd be foolish to ignore it. A surgeon with shaky hands and a teacher who hates children, for example, would be unsuitable for their jobs whatever their other virtues. But much of the time it's a bad idea to pay excessive attention to negative qualities and overlook positive ones. This is the mistake some people make when screening
potential friends or dates. They find some who are too outgoing or too reserved, others who have the wrong sense of humor. Of course, it's important to find people you truly enjoy, but expecting perfection can lead to much unnecessary loneliness. Don't misunderstand: We don't always commit the kind of
perceptual errors described in this section. Sometimes, for instance, people are responsible for their misfortunes, and sometimes our problems are not our fault. Likewise, the most obvious interpretation of a situation may be the correct one. Nonetheless, a large amount of research has proved again and again that our perceptions of others are often
distorted in the ways listed here. The moral, then, is clear: Don't assume that your first judgment of a person is accurate. Situational Factors Influencing Perception Along with the attribution errors described in the preceding pages, we consider a whole range of additional factors when trying to make sense of others' behavior. I have heard students say
things like, "It was John's fault, his speech was so confusing nobody could have understood it." Then, two minutes later, the same student remarked, "It wasn't my fault, what I said could not have been clearer. John must be stupid." Poor John! He was blamed when he was the receiver. John's problem was that he was the
other person, and that's who is always at fault. Stephen W. King 032-073 Ch02 Adler 40 PART ONE 2/28/05 9:38 AM Page 40 ELEMENTS OF COMMUNICATION CRITICAL THINKING PROBE PERCEIVING OTHERS AND YOURSELF 1. You can gain appreciation for the way perceptual errors operate by making two attributions for each situation that
follows: Develop your first explanation for the behavior as if you were the person involved. Your second explanation for the behavior should be developed as if someone you dislike were the person involved. Your second explanation for the behavior should be developed as if someone you dislike were the person involved. Your second explanation for the behavior should be developed as if someone you dislike were the person involved.
```

```
Laughing at an inappropriate or offensive joke 2. If your explanations for these behaviors differ, ask yourself why. Are the differing attributions justifiable, or do they support the tendency to make the perceptual errors listed on pages 36–39? 3. How do these perceptual errors operate in making judgments about others' behavior, especially when those
others come from different social groups? Relational Satisfaction The behavior that seems positive when you are in a satisfying relationship might regard the quirks of a housemate with amusement when things are going smoothly, but find them very annoying
when you are unhappy with his other behavior. (In this sense, our willingness to tolerate the potentially bothersome behavior of people we like is rather like the amusement we get when a beloved cat climbs the Christmas tree or the dog sneaks a hamburger when nobody is looking.) Degree of Involvement with the Other Person We sometimes view
people with whom we have or seek a relationship more favorably than those whom we observe from a detached perspective. 12 One study revealed how this principle operates in everyday life. A group of male subjects was asked to critique presentations by women who allegedly owned restaurants. Half of these presentations were designed to be
competent and half incompetent. The men who were told they would be having a casual date with the female speakers judged their presentations—whether competent or not—more highly than did those who didn't expect any involvement with the speakers. 13 Past Experience What meaning have similar events held? If, for example, you've been gouged
by landlords in the past, you might be skeptical about an apartment manager's assurances that careful housekeeping will assure the refund of your cleaning deposit. CULTURAL IDIOM been gouged by: was charged an excessive amount Expectations. If you imagine that your boss is unhappy with your work, you'll
probably feel threatened by a request to "see me in my office first thing Monday morning." On the other hand, if you imagine that your weekend will probably be pleasant. Social Roles A number of social relationships can influence the way we perceive others. For example, one recent study of communication in the
workplace revealed that observers—both men and women—interpret facial expressions dif- 032-073 Ch02 Adler 2/28/05 9:38 AM Page 41 CHAPTER 2 PERCEPTION, THE SELF, AND COMMUNICATION ferently depending on their status relative to the other person.14 Subjects were shown a photo of someone and asked to judge how that person was
feeling. When the person pictured was a manager, subjects saw less fear than when they were told that the person pictured was an employee. Gender also makes a difference in how we perceive others: Seeing a woman and a man pose an anger display of the same intensity, subjects saw more anger and less fear in a man's expression than in a
woman's, probably because gender stereotypes of emotion guided their interpretations. Knowledge If you know that a friend has just been jilted by a lover or been fired from a job, you'll interpret his aloof behavior differently than you would if you were unaware of what had happened. If you work in an environment where socializing is common and
colleagues have friendly relationships, you may be less likely to perceive a fellow worker's remark as sexual harassment than you would if you were in an unfamiliar environment. 15 Self-Concept When you're feeling insecure, the world is a very different place from the world you experience when you're confident. For example, the recipient's self-
concept has proved to be the single greatest factor in determining whether people who are on the receiving end of being teased interpret the teaser's motives as being friendly or hostile and whether people who are on the receiving emotions. The way we feel about
ourselves strongly influences how we interpret others' behavior. Perception and Culture Perceptual differences make communication challenging enough between members of the same culture. But when communication challenging enough between members of the same cultures, the potential for misunderstandings is even greater. Culture provides a 41 032-073 Ch02 Adler 42
2/28/05 PART ONE 9:38 AM Page 42 ELEMENTS OF COMMUNICATION UNDERSTANDING DIVERSITY NON-WESTERN VIEWS OF WESTERN MEDICAL CARE Author Anne Fadiman explains why Hmong emigrants from the mountains of Laos preferred their traditional shamanistic healers, called txiv neebs, to American doctors.17 After the
Hmong's objections are made explicit, it becomes clear why Western medicine can feel threatening and intrusive to patients who are already uncomfortable in a strange new environment. A txiv neeb might spend as much as eight hours in a sick person's home; doctors forced their patients, no matter how weak they were, to come to the hospital, and
then might spend only twenty minutes at their bedsides. Txiv neebs were CULTURAL IDIOM jilted: rejected polite and never needed to ask questions; doctors often demanded samples of blood (or even urine or feces, which they liked to keep in
little bottles), took X rays, and waited for days for the results to come back from the laboratory—and then, after all that, sometimes they were unable to identify the cause of the problem. Txiv neebs never undressed their patients; doctors asked patients to take off all their clothes, and sometimes dared to put their fingers inside women's vaginas. Txiv
neebs knew that to treat the body without treating the soul was an act of patent folly; doctors never even mentioned the soul. perceptual filter that influences the way we interpret even the other.18 Researchers used a binocular-like device
that projects different images to each eye. The subjects were twelve Americans and twelve Mexicans. Each was presented with ten pairs of photographs, each pair containing one picture from U.S. culture (e.g., a bullfight). After viewing each pair of images, the subjects reported what they saw. The
results clearly indicated the power of culture to influence perceptions: Subjects had a strong tendency to see the image from their own background. The same principle causes people from different cultures to interpret similar events in different ways. Blinking while another person talks may be hardly noticeable to North Americans, but the same
behavior is considered impolite in Taiwan. A "V" sign made with two fingers means "victory" in most of the Western world—as long as the palm facing out. But in some European countries the same sign with the palm facing out. But in some European countries the same sign with the palm facing out. and Far Eastern countries. Even beliefs about the very value of talk differ from one culture to another.19 North American culture views talk as desirable and uses it to achieve social purposes as well as to perform tasks. Silence in conversational situations has a negative value in this culture. It is likely to be interpreted as lack of interest, unwillingness
to communicate, hostility, anxiety, shyness, or a sign of interpersonal incompatibility. Westerners are uncomfortable with silence, which they find embarrassing and awkward. Furthermore, the kind of talk that Westerners admire is characterized by straightforwardness and honesty. Being indirect or vague— "beating around the bush," it might be
labeled—has a negative connotation. On the other hand, most Asian cultures discourage the expression of thoughts and feelings. Silence is valued, as Taoist sayings indicate: "In much talk there is great weariness," or "One who speaks does not know; one who knows 032-073 Ch02 Adler 2/28/05 9:38 AM Page 43 CHAPTER 2 PERCEPTION, THE SELF
AND COMMUNICATION does not speak." Unlike Westerners, who are uncomfortable with silence, Japanese and Chinese believe that remaining quiet is the proper state when there is nothing to be said. To Easterners, a talkative person is often considered a show-off or insincere. And when an Asian does speak up on social matters, the message is
likely to be phrased indirectly to "save face" for the recipient. It is easy to see how these different views of speech and silence can lead to communication problems when people from different views the other with disapproval
and mistrust. Only when they recognize the differences are just as important right at home when members of differences are just as important right at home when members of differences are just as important right at home when members of differences are just as important right at home when members of differences are just as important right at home when members of differences are just as important right at home when members of differences are just as important right at home when members of differences are just as important right at home when members of differences are just as important right at home when members of differences are just as important right at home when members of differences are just as important right at home when members of differences are just as important right at home when members of differences are just as important right at home when members of differences are just as important right at home when members of differences are just as important right at home when members of differences are just as important right at home when members of differences are just as important right at home when members of differences are just as important right at home when members of differences are just as important right at home when members of differences are just as important right at home when members of differences are just as important right at home when members are just as important right at home when members are just as important right at home when members are just as important right at home when members are just as important right at home when members are just as important right at home when members are just as important right at home when members are just as important right at home when members are just as important right at home when members are just as important right at home when members are just as important right at home when members are just as important right at home when members are just as important right at home when members are just as important right at home when members are just as important rig
misunderstandings. For example, an uninformed white teacher or police officer might interpret the downcast eyes of a Latino female as a sign of avoidance, or even dishonesty, when in fact this is the proper behavior in her culture for a female being addressed by an older man. To make direct eye contact in such a case would be considered undue
brashness or even a sexual come-on. Eye contact also differs in traditional black and white cultures. Whereas white stend to look away from a conversational partner while listening and less when listening. 20 This difference can cause
communication problems without either person's realizing the cause. For instance, white seem to be paying attention. A white speaker, therefore, might interpret a black partner's lack of eye contact as a sign of the contact as a measure of how closely the other person is listening. The more others make eye contact, the more they seem to be paying attention. A white speaker, therefore, might interpret a black partner's lack of eye contact as a sign of the contact as a
inattention or rudeness when quite the opposite could be true. Cross-cultural differences can be quite subtle. For example, when meeting with academic counselors, Latinos preferred to be acknowledged as individuals rather than being
identified as members of an ethnic group.21 Along with ethnicity, geography also can influence perception. A fascinating series of studies revealed that climate and geographic latitude were remarkably accurate predictors of communication predispositions.22 People living in southern latitudes of the United States are more socially isolated, less
tolerant of ambiguity, higher in self-esteem, more likely to touch others, and more likely to verbalize their thoughts and feelings. This sort of finding helps explain why communicators who travel from one part of a country to another find that their old patterns of communicating don't work as well in their new location. A southerner whose relatively
talkative, high-touch style seemed completely normal at home might be viewed as pushy and aggressive in a new northern home. Empathy and Perception By now it is clear that differing perceptions present a major challenge to communicators. One solution is to increase the ability to empathize. Empathy is the ability to re-create another person's
perspective, to experience the world from the other's point of view. 43 CULTURAL IDIOM "save face": protect one's dignity come-on: sexual advance When I meet someone from another culture, I behave in the way that is natural to me, while the other behaves in the way that is natural to him or her. The only problem is that our "natural" ways do not
coincide. Raymonde Carroll 032-073 Ch02 Adler 44 2/28/05 PART ONE 9:39 AM Page 44 ELEMENTS OF COMMUNICATION UNDERSTANDING DIVERSITY TODAY'S LESSON: EMPATHY Time and time again, it was the bathroom stalls that got to Laura Manis and Kevin McCarthy. "It's doable, but it's tight," said Manis, as she maneuvered a three-
point turn into one stall. "I should have come in forward," she observed after spending several minutes backing into another. "I'm glad I didn't really have to go to the bathroom," said McCarthy after emerging from a third. The pair, both second-year students in the University of Cincinnati's physical therapy assisting program, visited four suburban
restaurants Thursday in an exercise that was part lesson in empathy and part consumer survey. Though neither has any physical disability, they and their classmates spent the day in wheelchairs to see how accessible 44 area restaurants were. Working off a checklist, 11 pairs of students tested the ramps, entrances, tables, salad bar and bathrooms of
establishments. "Students come away with the impression that there are a lot of barriers and obstacles for (disabled) people if they want to lead a normal life," said Tina Whalen, the impression that there are a lot of barriers and obstacles for (disabled) people if they want to lead a normal life," said Tina Whalen, the impression that there are a lot of barriers and obstacles for (disabled) people if they want to lead a normal life," said Tina Whalen, the impression that there are a lot of barriers and obstacles for (disabled) people if they want to lead a normal life," said Tina Whalen, the impression that there are a lot of barriers and obstacles for (disabled) people if they want to lead a normal life," said Tina Whalen, the impression that there are a lot of barriers and obstacles for (disabled) people if they want to lead a normal life," said Tina Whalen, the impression that there are a lot of barriers and obstacles for (disabled) people if they want to lead a normal life," said Tina Whalen, the impression that there are a lot of barriers and obstacles for (disabled) people if they want to lead a normal life," said Tina Whalen, the impression that there are a lot of barriers and obstacles for (disabled) people if they want to lead a normal life," said Tina Whalen, the impression that the lead a normal life, is a lot of the life, the life of the 
through the door and up to a table, some of them are too tired to eat." Recent legislation such as the 1990 Americans with Disabilities Act has made it illegal for businesses to discriminate on the basis of physical handicaps, and most buildings are now required to have wheelchair access and other provisions for the disabled. But Thursday, the
students found that legal doesn't always mean easy—or safe. Take, for instance, the wheelchair ramp into the front door of Wendy's fast-food restaurant near Tri-County Mall. It slopes out of a pair of wide doors—and into the restaurant near Tri-County Mall. It slopes out of a pair of wide doors—and into the restaurant near Tri-County Mall. "This (exercise) allows us the opportunity to experience the reality of life of someone who's disabled, as opposed to just learning about it in a textbook," said Manis. Julie Irwin DIMENSIONS OF EMPATHY As we'll use the term here, empathy has three dimensions.23 On one level, empathy involves perspective taking—the ability to take on the
viewpoint of another person. This understanding requires a suspension of judgment, so that for the moment you set aside your own opinions and take on those of the other person. Besides cognitive understanding, empathy also has an emotional dimension that allows us to experience the feelings that others have. We know their fear, joy, sadness, and
so on. When we combine the perspective-taking and emotional dimensions, we see that empathizing allows us to experience the other's perception—in effect, to become that person. When we empathize we go beyond just thinking and feeling as others do
and genuinely care about their well-being. It is easy to confuse empathy with sympathy, but the concepts are different in two important ways. First, sympathy means you feel compassion for another person's predicament, whereas empathy means you feel compassion for another person's predicament, whereas empathy means you feel compassion for another person's predicament, whereas empathy means you feel compassion for another person's predicament, whereas empathy means you feel compassion for another person's predicament, whereas empathy means you feel compassion for another person's predicament, whereas empathy means you feel compassion for another person's predicament, whereas empathy means you feel compassion for another person's predicament, whereas empathy means you feel compassion for another person's predicament, whereas empathy means you feel compassion for another person's predicament, whereas empathy means you feel compassion for another person's predicament, whereas empathy means you feel compassion for another person's predicament, whereas empathy means you feel compassion for another person's predicament, whereas empathy means you feel compassion for another person's predicament, whereas empathy means you feel compassion for another person's predicament, whereas empathy means you feel compassion for another person feel compassion for another person feel compassion feel compass
with an unwed mother or a homeless person and empathizing with them—imagining what it would be like to be in their position. Despite your concern, sympathy lacks the degree of identification that empathy entails. When you sympathize, it is the other's confusion, joy, or pain. When you empathize, the experience becomes your own, at least for the
moment. Both perspectives are important ones, but empathy is clearly the more complete of the two. 032-073 Ch02 Adler 2/28/05 9:39 AM Page 45 CHAPTER 2 PERCEPTION, THE SELF, AND COMMUNICATION Empathy is different from sympathy in a second way. We only sympathize when we accept the reasons for another's pain as valid, whereas
it's possible to empathize without feeling sympathy. You can empathize with a difficult relative, a rude stranger, or even a criminal without feeling much sympathy for that person. Empathizing, you will almost certainly understand a person
better, but sympathy won't always follow. The ability to empathize seems to exist in a rudimentary form in even the youngest children. 24 Virtually from birth, infants become visibly upset when Source: ©The New Yorker Collection 1997 William Steig from cartoonbank.com. All they hear another infant crying, and children who are Rights Reserved. a
few months old cry when they observe another child crying. Young children have trouble distinguishing others' distress from their own finger in her mouth as if she was feeling pain. Researchers report cases in which children who see their parents crying wipe their own eyes,
even though they are not crying. Although infants and toddlers may have a basic capacity to empathize, studies with twins suggest that the degree to which we are born with the ability to sense how others are feeling varies according to genetic factors. Although some people may have an inborn edge, environmental experiences are the key to
developing the ability to understand others. Specifically, the way in which parents communicate with their children the distress that others feel from their misbehavior ("Look how sad Jessica is because you took her toy. Wouldn't you be sad if
someone took away your toys?"), those children gain a greater appreciation that their acts have emotional consequences than they do when parents simply label behavior as inappropriate ("That was a mean thing to do!"). There is no consistent evidence that suggests that the ability to empathize is greater for one sex or the other.25 Some people
however, seem to have a hereditary capacity for greater empathizing than do others. 26 Studies of identical and fraternal twins. Interestingly, there seems to be no difference between males. Although empathy may have a biological
basis, environment can still play an important role. For example, parents who are sensitive to their children's feelings tend to have children who reach out to others.27 Total empathy is impossible to achieve. Completely understanding another person's point of view is simply too difficult a task for humans with different backgrounds and limited
communication skills. Nonetheless, it is possible to get a strong sense of what the world looks like through another person's eyes. The value of empathy is demonstrated by the results of a simple experiment.28 In a study, college students were asked to list their impressions of people either shown in a videotaped discussion or described in a short
story. Half the students were instructed to empathize with the person shown as much as possi- 45 032-073_Ch02_Adler 46 PART ONE 2/28/05 9:39 AM Page 46 ELEMENTS OF COMMUNICATION ble, and the other half were not given any instructions about empathizing. The results were impressive: The students who did not practice empathy were
prone to explain the person's behavior in terms of personality characteristics. For example, they might have explained a divorce to the partners' lack of understanding. The empathetic students, on the other hand, were more aware of possible elements in the situation
that might have contributed to the reaction. For instance, they might have explained a person's unkind behavior in terms of job pressures or personal difficulties. In other words, practicing empathy seems to make people more tolerant. A willingness to empathize can make a difference in everyday disputes. For example, communication researchers have
spelled out how understanding opposing views can increase understanding and constructive problem solving in conflicts between environmentalists who want to earn a profit. After the parties begin to see one another's point of view, they can discover ways of protecting native species and allow
landowners to carry on their enterprises. 29 You might argue here, "Why should I be more tolerant? Maybe the other person's position or behavior isn't justified." Perhaps so, but research clearly shows that we are much more charitable when finding explanations for our own behavior. 30 When explaining our own actions, we are quick to suggest
situational causes:"I was tired,""She started it,""The instructions weren't clear." In other words, we often excuse ourselves by saying, "It wasn't my fault!"As we're less forgiving when we judge others. Perhaps becoming more empathetic can help even the score a bit, enabling us to treat others at least as kindly as we treat
ourselves. PERCEPTION CHECKING Good intentions and a strong effort to empathize are one way to understand others. Along with a positive attitude, however, there is a simple tool that can help you interpret the behavior of others more accurately. To see how this tool operates, consider how often others jump to mistaken conclusions about your
thoughts, feelings, and motives: "Why are you mad at me?" (Who said you were?) "Come on now. Tell the truth." (Who said you were lying?) As you'll learn in Chapter 7, even if your interpretation is correct, a dogmatic, mind-reading statement is likely to generate defensiveness. The
skill of perception checking provides a better way to handle your interpretations. A complete perception check has three parts:
look like this: "When you stomped out of the room and slammed the door [behavior], I wasn't sure whether you were mad at me [first interpretation] or just in a hurry [second interpretation]. I wonder whether something's bothering you [first interpretation] or just in a hurry [second interpretation] or just in a hurry [second interpretation].
interpretation] or whether you're just feeling quiet 032-073 Ch02 Adler 2/28/05 9:39 AM Page 47 PERCEPTION, THE SELF, AND COMMUNICATION 47 Source: CATHY © 1989 Cathy Guisewite. Reprinted with permission of UNIVERSAL PRESS SYNDICATE. All Rights Reserved. CHAPTER 2 [second interpretation]. What's up [request for
clarification]?" "You said you really liked the job I did [behavior], but there was something about your voice that made me think you may not like it [first interpretation]. Maybe it's just my imagination, though [second interpretation]. How do you really feel [request for clarification]?" Perception checking is a tool for helping us understand others
accurately instead of assuming that our first interpretation is correct. Because its goal is mutual understanding, perceptions, it minimizes defensiveness by preserving the other person's face. Instead of saying in effect "I know what you're thinking . . . "a
perception check takes the more respectful approach that states or implies "I know I'm not qualified to judge you without some help." Sometimes a perception check won't need all of the parts listed earlier to be effective: "You haven't dropped by lately. Is anything the matter [single interpretation combined with request for clarification]?" "I can't tell
whether you're kidding me about being cheap or if you're serious [behavior combined with interpretations]. Are you mad at me?" "Are you sure you don't mind driving? I can use a ride if it's no trouble, but I don't want to take you out of your way [no need to describe behavior]." CULTURAL IDIOM preserving the other person's face: protecting the
other's dignity dropped by: made an unplanned visit 032-073 Ch02 Adler 48 PART ONE 2/28/05 9:39 AM Page 48 ELEMENTS OF COMMUNICATION Retrospectively, one can ask "Who am I?" But in practice, the answer has come before the question. Of course, a perception check can succeed only if your nonverbal behavior reflects the open-
mindedness of your words. An accusing tone of voice or a hostile glare will contradict the sincerely worded request for clarification, suggesting that you have already made up your mind about the other person's intentions. J. M. Yinger PERCEIVING THE SELF It should be clear by now that our perceptions of others are subjective and that it takes a
real effort to bridge the gap between our ideas about others and the way they view themselves. Now we will turn our examination inward, exploring the way we perceive ourselves and discussing how our self-perceptions affect our communication. Self-Concept is a set of relatively stable perceptions that each of us holds about others and the way they view themselves.
ourselves. The self-concept includes our conception about what is unique about us and what makes us both similar to, and different from, others. To put it differently, the self-concept is rather like a mental mirror that reflects how we view ourselves: not only physical features, but also emotional states, talents, likes and dislikes, values, and roles. We
will have more to say about the nature of the self-concept shortly, but first you will find it valuable to gain a personal understanding of how this theoretical construct applies to you. You can do so by answering a simple question? There
are many ways of identifying yourself. Take a few more minutes and list as many ways as you can to identify who you are. You'll need this list later in this chapter, so be sure to complete it now. Try to include all the characteristics that describe you:
Talents you possess or lack Your intellectual capacity Your strong beliefs Your social roles Even a list of twenty or thirty terms would be only a partial description. To make this written self-portrait complete, your list would be equally important. For
example, the most significant part of one person's self-concept might consist of social roles, whereas for another it might consist of physical appearance, health, friendships, accomplishments, or skills. An important element of the self-concept is self-esteem: our evaluations of self-worth. One person's self-concept might include being religious, tall, or
athletic. That person's self-esteem would be shaped by how he or she felt about these 032-073_Ch02 Adler 2/28/05 9:39 AM Page 49 CHAPTER 2 PERCEPTION, THE SELF, AND COMMUNICATION qualities: "I'm glad that I am athletic," or "I am embarrassed about being so tall," for example. Self-esteem has a powerful effect on the way we
communicate.31 People with high self-esteem are more willing to communicate than people with low selfesteem. They are more likely to think highly of others and expect to be accepted by others. They are more likely to think highly of others are watching them. They work harder for people who demand high standards of
to possible disapproval of others and perform poorly when being watched. They work harder for undemanding, less critical people. They feel threatened by people they view as superior in some way and have difficulty defending themselves against others' negative comments. Communication and Development of the Self So far we've talked about what
the self-concept is; but at this point you may be asking what it has to do with the study of human communication. We can begin to answer this question by looking at how you came to possess your own self-concept. Our identity comes almost exclusively from communication with others. As psychologists Arthur Combs and Donald Snygg put it: The self
is essentially a social product arising out of experience with people. . . . We learn the most significant and fundamental facts about ourselves made as a consequence of the ways we perceive others behaving toward us.32 The term reflected appraisal, coined by Harry Stack Sullivan,33 is a
good one, because it metaphorically describes the fact that we develop an image of our- 49 We are not only our brother's maker. Bonaro Overstreet 032-073 Ch02 Adler 50 2/28/05 PART ONE 9:39 AM Page 50 ELEMENTS OF COMMUNICATION UNDERSTANDING DIVERSITY WAIT,
           a Chinese man, I realized that I could support our marriage best by changing my name to his. Hyphenation was an option, but hyphenated names often create a cumbersome jingle. In my case, Berk-Changs"). I thought of keeping my birth name but
did not want the burden of repeatedly explaining, "My husband is Chinese, you know." People sometimes take offense when they discover that I am not Chinese, as if I were engaged in a form of false advertising. Friends recalled the "Seinfeld" episode in which Jerry speaks to a woman named Donna Chang after dialing a wrong number, asks her out
and is disappointed to find she is a white woman from Long Island. She had shortened her name from Changstein. When a group of women friends from out of town unexpectedly visited me in Manhattan, I called a popular Chinese restaurant and asked if it could possibly seat eight people that evening. "You need to call further in advance for a party
that large," the hostess told me. "I have only 11 P.M." I asked to be put on the waiting list and gave her my name. Then I heard the rustling of pages. "Well," she said, "I could squeeze you in at 8:30." When we arrived, I announced my name. Then I heard the rustling of pages. "Well," she said, "I have only 11 P.M." I asked to be put on the waiting list and gave her my name. Then I heard the rustling of pages. "Well," she said, "I have only 11 P.M." I asked to be put on the waiting list and gave her my name. Then I heard the rustling of pages. "Well," she said, "I have only 11 P.M." I asked to be put on the waiting list and gave her my name. Then I heard the rustling of pages. "Well," she said, "I have only 11 P.M." I have only 11 P.M
to our table, but what are we Donna Changsteins of the world to do? Should I have interjected on the telephone that afternoon, "Incidentally, ma'am, I am not Chinese—but my husband is"? I also unwittingly confused the personnel department at the law firm where I practiced at the time of my wedding. After I notified it that I had changed my name
recruitment purposes? 3. Do the Asian attorneys now view her as competition for the partment, not having met me, must have assumed I was Asian, and asked me to interview anyone who was of Asian descent. No doubt some of the candidates I interviewed were perplexed. I noticed
a few sidelong glances that suggested "Is she half?" As time passes, I feel emboldened by my new identity. Losing my birth name, ironically, has been for me a matter of self-definition. I am tickled by the irony of having made a modern decision by doing the most traditional of all things wifely: taking my husband's name. Pari Chang selves from the
also contribute to the developing self-concept. These messages continue later in life, especially when they come from what social scientists term significant others—people whose opinions we especially value. A teacher from long ago, a special friend or relative, or perhaps a barely known acquaintance whom you respected can all leave an imprint on
how you view yourself. To see the importance of significant others, ask yourself how you arrived at your opinion of you as a student, as a person attractive to the opposite sex, as a competent 032-073 Ch02 Adler 2/28/05 9:39 AM Page 51 CHAPTER 2 PERCEPTION, THE SELF, AND COMMUNICATION worker, and so on and you will see that these self
evaluations were probably influenced by the way others regarded you. As we grow older, the influence of significant others is less powerful. 35 The evaluations of others still influence beliefs about the self-concept has become distorted
so that it shapes the input of others to make it conform with our existing beliefs. For example, if your self-concept includes the element "poor student," you might argue that not every part of one's self-concept is shaped by others, insisting
there are certain objective facts that are recognizable by selfobservation. After all, nobody needs to tell you that you are taller than others, speak with an accent, can run quickly, and so on. These facts are obvious. Though it's true that some features of the self are immediately apparent, the significance we attach to them—the rank we assign them in
the hierarchy of our list and the interpretation we give them—depends greatly on the social environment. The interpretation of characteristics such as weight depends on the way people important to us regard them. Being anything less than trim and muscular is generally regarded as undesirable because others tell us that slenderness is an ideal. In
one study, young women's perceptions of their bodies changed for the worse after watching just thirty minutes of televised images of the "ideal" female form.36 Furthermore, these distorted self-images can lead to serious behavioral disorders such as depression, anorexia nervosa, bulimia, and other eating disorders. In cultures and societies where
greater weight is considered beautiful, a Western supermodel would be considered unattractive. In the same way, the fact that one is single or married, solitary or sociable, aggressive or passive takes on meaning depending on the interpretation that society attaches to those traits. Thus, the importance of a given characteristic in your self-concept has
as much to do with the significance that you and others attach to it as with the existence of the characteristic. ETHICAL CHALLENGE IS HONESTY THE BEST POLICY? 51 Premier Artiste Watch me perform! I walk a tightrope of unique design. I teeter, falter, recover and bow. You applaud. I run forward, backward, hesitate and bow. You applaud. If
you don't applaud, I'll fall. Cheer me! Hurray me! Or you push me Down. Lenni Shender Goldstein By now it should be clear that each of us has the power to influence others' selfconcepts. Even with the best of intentions, there are cases when an honest message is likely to reduce another person's self-esteem. Consider a few examples:
friend, an aspiring artist, asks "What do you think of my latest painting?" You think it's terrible. After a long, hard week you are looking forward to spending the evening at home. A somewhat insecure friend who just broke off a long romantic relationship calls to ask if you want to get together. You don't. A good friend asks to use your name as a
reference for a potential employer. You can't honestly tell the employer that your friend is qualified for the job. In situations like these, how do you reconcile the desire to avoid diminishing another person's self-esteem with the need to be honest? Based on your conclusions, is it possible to always be both honest and supportive? 032-073 Ch02 Adler
52 2/28/05 PART ONE 9:39 AM Page 52 ELEMENTS OF COMMUNICATION UNDERSTANDING DIVERSITY DEAFNESS AND IDENTITY 37 The experience of Howard offers a dramatic example of how reference groups and reflected appraisal can shape identity. Every member of Howard's immediate family—parents, brother, aunts, and uncles—was
deaf. He spent his entire early childhood around deaf people and in his preschool life accepted this way of being as the natural state of affairs. Even as a young child, Howard knew about deafness. The American Sign Language sign for "deaf" was part of his everyday vocabulary. But when he began school, Howard soon discovered that the same sign
had a subtle but dramatically different meaning. Among his family, "deaf" meant "us—people who behave as expected." But in a mostly hearing world, the same term meant "a remarkable condition—different from normal." This sense of difference can shape the identity of a deaf child, especially in environments where sign language is discouraged in
favor of communication forms that are favored in the hearing world, such as lip reading and speaking. In such an environment, it's not hard to imagine how the identity "I'm deaf" can come to mean "I'm different," and then "I'm deficient." Howard's physical condition didn't change when he began school, but his sense of himself shifted due to the
powerful than most people realize. Although we seldom recognize the fact, our whole notion of the self is shaped by the culture in which we have been reared. 38 The most obvious feature of a culture is the language will have little noticeable impact
But when your primary language is not the majority one, or when it is not prestigious, the sense of being a member of what social scientists call the "out-group" is strong. At this point the speaker of a nondominant language can react in one of two ways: either to feel pressured to assimilate by speaking the "better" language, or to refuse to acceed to
the majority language and maintain loyalty to the ethnic language. In either case, the impact of language on the self-concept is powerful. On one hand, the feeling is likely to be "I'm not as good as speakers of the native language on the self-concept is powerful. On one hand, the feeling is likely to be "I'm not as good as speakers of the native language." A case study of Hispanic
managers illustrates the dilemma of speaking a nondominant language. 40 The managers—employees in a predominantly Anglo organization—felt their "Mexican" identity threatened when they found that the road to advancement would be smoother if they deemphasized their Spanish and adopted a more colloquial English style of speaking. Cultures
affect the self-concept in more subtle ways, too. Most Western cultures are highly individualistic, whereas other cultures—most Asian ones, for example—are traditionally much more collective. 41 When asked to identify themselves, Americans, Canadians, Australians, and Europeans would probably respond by giving their first
name, surname, street, town, and country. Many Asians do it the other way 032-073_Ch02_Adler 2/28/05 9:39 AM Page 53 CHAPTER 2 PERCEPTION, THE SELF, AND COMMUNICATION around 42 If you ask Hindus for their identity, they will give you their caste and village as well as their name. The Sanskrit formula for identifying one's self begins
with lineage and goes on to family and house and ends with one's personal name.43 These conventions for naming aren't just cultures a person gains identity by belonging to a group. This means that the degree of interdependence among members of the society
and its subgroups is much higher. Feelings of pride and self-worth are likely to be shaped not only by what the individual does, but also by the behavior of other members of the community. This linkage to others explains the traditional Asian denial of self-importance—a strong contrast to the selfpromotion that is common in individualistic Western
feel when communicating. In societies where the need to conform is great, there is a higher degree of communication apprehension. For example, as a group, residents of China, Korea, and Japan exhibit significantly more anxiety about speaking out than do members of individualistic cultures such as the United States and Australia. 46 It's important to
realize that different levels of communication apprehension don't mean that shyness is a "problem" in some cultures. In fact, just the opposite is true: In these cultures, reticence is valued. When the goal is to avoid being the nail that sticks out, it's logical to feel nervous when you make yourself appear different by calling attention to yourself. A self-
concept that includes "assertive" might make a Westerner feel proud, but in much of Asia it would more likely be cause for shame. TABLE 2-1 53 In Japan, in fact, everything had been made level and uniform—even humanity. By one official count, 90 percent of the population regarded themselves as middle-class; in schools, it was not the outcasts who
beat up the conformists, but vice versa. Every Japanese individual seemed to have the same goal as every other—to become like every other—to be of the base ball stadium to the watercolor canvas, I heard the
same unswerving, even maxim: "The nail that sticks out must be hammered down." Pico Iyer Video Night in Katmandu The Self in Individualistic Cultures Collectivistic Cultures Individualistic Individual

54 PART ONE 2/28/05 9:39 AM Page 54 ELEMENTS OF COMMUNICATION The difference between individualism and collectivism shows up in everyday interaction. Communication researcher Stella Ting-Toomey has developed a theory that explains cultural differences in important norms, such as honesty and directness.47 She suggests that in
individualistic Western cultures where the main desire is to build connections between the self and others, indirect approaches that maintain harmony are considered more desirable. "I gotta be me" could be the motto of a Westerner, but
situations.48 We use the notion of personality to characterize others as friendly or aloof, energetic or lazy, smart or stupid, and in literally thousands of other ways. In fact, one survey revealed almost eighteen thousand trait words in the English language that can be used to describe a personality. 49 People do seem to possess some innate personality
traits. Psychologist Jerome Kagan reports that 10 percent of all children seem to be born with a biological disposition toward shyness. 50 Babies who stop playing when a stranger enters the room, for example, are more likely than others to be reticent and introverted as adolescents. Likewise, Kagan found that another 10 percent of children seem to
be born with especially sociable dispositions. Research with twins also suggests that personality may be at least partially a matter of physical destiny. 51 Biologically identical twins are much more similar in sociability than are fraternal twins. These similarities are apparent not only in infancy but also when the twins have grown to adulthood and are
noticeable even when the twins have had different experiences. Despite its common use, the term personality is often an oversimplification. Much of our behavior isn't consistent. Rather, it varies from one situation to another. You may be quiet around strangers but gregarious around friends and family. You might be optimistic about your schoolworks around strangers but gregarious around friends and family. You might be optimistic about your schoolworks around strangers but gregarious around strangers but great a
or career but pessimistic about your romantic prospects. The term easygoing might describe you behavior at home, whereas you might be a fanatic at work. This kind of diversity is not only common; it's also often desirable. The argumentative style you use with friends wouldn't be well received by the judge in traffic court when you appeal a citation.
Likewise, the affectionate behavior you enjoy with a romantic partner at home probably wouldn't be appropriate in public. As you read in Chapter 1, a wide range of behaviors is an important ingredient of communication competence. In this sense, a consistent personality can be more of a liability than an asset—unless that personality is "flexible."
Figure 2-1 pictures the relationship between the self-concept and behavior. It illustrates how the self-concept both shapes much of our communication behavior and is shaped by it. We can begin to examine the process by considering the self-concept you bring to an event. Suppose, for example, that one element of your self-concept is "nervous with
authority figures." That image probably comes from the evaluations of significant others in the past—perhaps teachers or former employers. If you view yourself as nervous with authority figures like these, you will probably behave in nervous ways when you encounter them in the 032-073 Ch02 Adler 2/28/05 9:39 AM Page 55 CHAPTER 2

helps to govern your present behavior, and influences the way others view you. The Self-Fulfilling Prophecy The self-concept is such a powerful force on the present, but also can actually influence our behavior and that of others in the future. Such occurrences come about through a powerful force on the present, but also can actually influence our behavior, and influences the way others view you. The Self-Fulfilling Prophecy The self-concept is such a powerful force on the present, but also can actually influence our behavior.
phenomenon called the self-fulfilling prophecy. A self-fulfilling prophecy occurs when a person's expectation of an outcome makes the outc
were about to meet, saying that you wouldn't like the person. The prediction turned out to be correct—you didn't like the new acquaintance. CULTURAL IDIOM the chicken or the egg?" 55 032-073 Ch02 Adler 56 PART ONE 2/28/05 9:39 AM ELEMENTS OF
COMMUNICATION CULTURAL IDIOM botch: destroy, ruin psyched yourself: affected your behavior by changing your thinking Source: © The New Yorker Collection 1991 Ed Frascino from cartoonbank.com. All Rights Reserved. Page 56 In each of these cases, there is a good chance that the outcome happened because it was predicted to occur. You
needn't have botched the interview, the party might have been boring only because you helped make it so, you might have done better on the new acquaintance if your friend hadn't given you preconceptions. In other words, what helped make each outcome occur was the
expectation that it would happen. There are two types of self-fulfilling prophecies. The first type occurs when an outcome that needn't have occurred does occur because you expect it to. In sports you have probably psyched
yourself into playing either better or worse than usual, so that the only explanation for your unusual performance was your attitude that you would behave differently. The same principle operates for anxious public speakers: Communicators who feel anxious about facing an audience often create self-fulfilling prophecies about doing poorly that cause
them to perform less effectively.52 (Chapter 12 offers advice on overcoming this kind of stage fright.) Research has demonstrated the power of self-fulfilling prophecies. In one study, communicators who believed they were incompetent proved less likely than others to pursue rewarding relationships and more likely to sabotage their existing
relationships than did people who were less critical of themselves.53 On the other hand, students who perceived themselves as capable achieved more academically.54 In another study, subjects who were sensitive to social rejection, perceived themselves as capable achieved more academically.54 In another study, subjects who were sensitive to social rejection, perceived themselves.53 On the other hand, students who perceived themselves as capable achieved more academically.54 In another study, subjects who were sensitive to social rejection tended to expect rejection, perceived themselves.53 On the other hand, students who perceived themselves as capable achieved more academically.54 In another study, subjects who were sensitive to social rejection tended to expect rejection.
in ways that jeopardized the quality of their relationships. 55 The self-fulfilling prophecy also operates on the job. For example, salespeople who perceive themselves as being effective, despite the fact that there was no difference in the approach that members of
disposition. 56 A second type of self-fulfilling prophecy occurs when the expectations of one person govern another's actions. The classic example was demonstrated by Robert Rosenthal and Lenore Jacobson: "I don't sing because I am happy because I sing." Twenty percent of the children in a certain elementary school were reported to
their teachers as showing unusual potential for intellectual growth. The names of these 20 percent were drawn by means of a table of random numbers, which is to say that the names were drawn out of a hat. Eight months later these unusual or "magic" children showed significantly greater gains in IO than did the remaining children who had not
been singled out for the teachers' attention. The change in the teachers' expectations regarding the intellectual performance of these allegedly "special" 032-073 Ch02 Adler 2/28/05 9:39 AM Page 57 CHAPTER 2 PERCEPTION, THE SELF, AND COMMUNICATION children had led to an actual change in the intellectual performance of these randomly the intellectual performance of these randomly in the intellectual performance of the intelle
selected children.57 In other words, some children may do better in school, not because they are any more intelligent than their classmates, but because they can achieve. To put this phenomenon in context with the self-concept, we can say that when a teacher communicates to students the
message, "I think you're bright," they accept that evaluation and change their self-concepts to include that evaluation. Unfortunately, we can assume that the same principle holds for those students whose teachers send the message, "I think you're students whose teachers send the message, "I think you're students whose teachers send the message, "I think you're students whose teachers send the message, "I think you're students whose teachers send the message, "I think you're students whose teachers send the message, "I think you're students whose teachers send the message, "I think you're students whose teachers send the message, "I think you're students whose teachers send the message, "I think you're students whose teachers send the message, "I think you're students whose teachers send the message, "I think you're students whose teachers send the message, "I think you're students whose teachers send the message, "I think you're students whose teachers send the message, "I think you're students whose teachers send the message, "I think you're students whose teachers send the message, "I think you're students whose teachers send the message, "I think you're students whose teachers send the message, "I think you're students whose teachers send the message, "I think you're students whose teachers whose teac
concept and thus the behavior of people in a wide range of settings outside of the schools. In medicine, patients who unknowingly receive placebos—substances such as injections of sterile water or doses of sugar pills that have no curative value—often respond just as favorably to treatment as do people who actually receive a drug. The patients
believe they have taken a substance that will help them feel better, and this belief actually brings about a "cure." In psychotherapy, Rosenthal and Jacobson describe several studies that patients who believe they will benefit from treatment do so, regardless of the type of treatment they receive. In the same vein, when a doctor believes a
  patient will improve, the patient may do so precisely because of this expectation, whereas another person for whom the doctor—plays an important role in determining the actual state of health. The self-fulfilling
families as well. If parents tell their children long enough that they can't do anything right, the children's self-concepts will soon incorporate this idea, and they will fail at many or most of the tasks they attempt. On the other hand, if children are told they are capable or lovable or kind persons, there is a much greater chance of their behaving
accordingly.58 The self-fulfilling prophecy is an important force in communication, but it doesn't explain all behavior. There are certainly times when the expectation of an event's outcome won't bring about that outcome. Your hope of drawing an ace in a card game won't in any way affect the chance of that card's turning up in an already shuffled
deck,and your belief that good weather is coming won't stop the rain from falling. In the same way, believing you'll do well in a job interview when you're clearly not qualified for the position is unrealistic. Similarly, there will probably be people you don't like and occasions you won't enjoy, no matter what your attitude. To connect the self-fulfilling
prophecy with the "power of positive thinking" is an oversimplification. In other cases, your expectations will be borne out because you are a good predictor and not because you are a good predictor an
shaped by a parent or teacher even though the behavior did match what was expected. In the same way, some workers excel and others fail, some patients recover and others fail.
prophecies play in our lives. To a great extent we are what we believe we are. In this sense we and those around us constantly create our self-concepts and thus ourselves. 57 There is an old joke about a man who was asked if he could play a violin and answered, "I don't know. I've never tried." This is psychologically a very wise reply. Those who have
never tried to play a violin really do not know whether they can or not. Those who say too early in life and too firmly, "No, I'm not at all musical," shut themselves off prematurely from whole areas of life that might have proved rewarding. In each of us there are unknown possibilities, undiscovered potentialities—and one big advantage of having an
open selfconcept rather than a rigid one is that we shall continue to discover more and more about ourselves as we grow older. S. I. Hayakawa CULTURAL IDIOM in the same vein: similarly 032-073 Ch02 Adler 58 PART ONE 2/28/05 9:39 AM Page 58 ELEMENTS OF COMMUNICATION CRITICAL THINKING PROBE SELF-FULFILLING PROPHECIES
Explore how self-fulfilling prophecies affect your communication by answering the following questions: 1. Identify three communication-related predictions you make about others. What are the effects of these predictions you make about others. What are the effects of these predictions? 2. Identify three self-fulfilling prophecies you
impose on yourself. What are the effects of these prophecies? How would you communicate differently if you did not subscribe to them? IDENTITY MANAGEMENT: COMMUNICATION AS IMPRESSION MANAGEMENT So far we have described how communication shapes the way communicators view themselves and others. In the remainder of this
chapter we turn the tables and focus on impression management—the communication strategies people use to influence how others view them. In the following pages you will see that many of our messages aim at creating desired impressions. Public and Private Selves CULTURAL IDIOM turn the tables: reverse the point of view To understand why
impression management exists, we have to discuss the notion of self in more detail. So far we have referred to the "self" as if each of us had only one identity. In truth, each of us possesses several selves, some private and others public. Often these selves are quite different. The perceived self is a reflection of the self-concept. Your perceived self is the
person you believe yourself to be in moments of honest self-examination. We can call the perceived self "private" because you are unlikely to reveal all of it to another person. You can verify the private nature of the perceived self by reviewing the self-concept list you developed while reading page 48. You'll probably find some elements of yourself there
that you would not disclose to many people, and some that you would not share with anyone. You might, for example, be reluctant to share some feelings about your appearance ("I think I'm rather unattractive"), your motives ("I
care more about myself than about others"). In contrast to the perceived self, the presenting self is a public image—the way we want to appear to others. In most cases the presenting self we seek to create is a socially approved image.
between the perceived and presenting selves. For instance, Table 2-2 shows that the self-concepts of the members of one group of male and female college students were different in several respects from both their private selves and from the public selves of the opposite sex.59 Sociologist Erving Goffman
used the word face to describe the presenting self, and he coined the term facework to describe the verbal and nonverbal ways 032-073 Ch02 Adler 2/28/05 9:39 AM Page 59 CHAPTER 2 TABLE 2-2 PERCEPTION, THE SELF, AND COMMUNICATION Self-Selected Adjectives Describing Perceived and Presenting Selves of College Students Perceived
Self Men Presenting Self Women Men Women 1. Friendly 1. Kild 1. Active 2. Active 2. Responsible 3. Responsible 
8. Smart 8. Curious 8. Capable 8. Proud 9. Happy 9. Faithful 9. Responsible 10. Funny 59 10. Attractive 10. Smart we act to maintain our own presenting image and the images of others.60 He argued that each of us can be viewed as a kind of playwright, who creates roles that we want others to believe, as well as the performer
who acts out those roles. Facework involves two tasks: Managing our own identity and communicating in ways that reinforce the identities that others are trying to present.61 You can see how these two goals operate by recalling a time when you've used self-deprecating humor to defuse a potentially unpleasant situation. Suppose, for example, that a
friend gave you confusing directions to a party that caused you to be late. "Sorry I got lost,"you might have said. "I'm a terrible navigator." This sort of mild self-putdown accomplishes two things at once: It preserves the other person's face by implicitly saying "It's not your fault." At the same time, your mild self-debasement shows that you're a nice
person who doesn't find faults in others or make a big issue out of small problems.62 Characteristics of this process. WE STRIVE TO CONSTRUCT MULTIPLE IDENTITIES In the course of even a single day, most people play a
variety of roles: respectful student, joking friend, friendly neighbor, and helpful worker, to suggest just a few. We even play a variety of roles with the same person. As you grew up you almost certainly changed "Hah! This is the Old King Cole nobody ever sees." Source: © The New Yorker Collection 1983 Dana Fradon from cartoonbank.com. All Rights

Edwards, "Self-Concepts and Self-Presentations of Males and Females: Similarities and Differences," Communication Reports 10 (1997): 55-62. 032-073 Ch02 Adler 60 PART ONE 2/28/05 9:39 AM Page 60 ELEMENTS OF COMMUNICATION CULTURAL IDIOM "face-saving person": person wishing to be
thought of favorably characters as you interacted with your parents. In one context you were the helpless child ("You can trust me with the car!"), and in another context you were a dedicated family member, and at other times you may have
played the role of rebel. Likewise, in romantic relationships we switch among many ways of behaving, depending on the context: friend, lover, business partner, scolding critic, apologetic child, and so on. The ability to construct multiple identities is one element of communication competence. For example, the style of speaking or even the language
itself can reflect a choice about how to construct one's identity. We recall an African American colleague who was also minister of a Southern Baptist congregation consisting mostly of black members. On campus his manner of speaking was typically professorial; but a visit to hear him preach one Sunday revealed a speaker whose style was much more
animated and theatrical, reflecting his identity in that context. Likewise, one scholar pointed out that bilingual Latinos in the United States often choose whether to use English or Spanish depending on the kind of identity they are seeking in a given conversation.63 IDENTITY MANAGEMENT IS COLLABORATIVE As we perform like actors trying to
create a front, our "audience" is made up of other actors who are trying to create their own characters. Identity-related communication is a kind of process theater in which we collaborate with other actors to improvise scenes in which our characters mesh. You can appreciate the collaborative nature of identity management by thinking about how you
might handle a gripe with a friend or family member who has failed to pass along a phone message that arrived while you were away from home. Suppose that you decide to raise the issue tactfully in an effort to avoid seeming like a nag (desired role for yourself: "nice person") and also to save the other person from the embarrassment of being
confronted (hoping to avoid suggesting that the other person's role is "screw-up"). If your tactful bid is accepted, the dialogue might sound like this: You: ". . . By the way, Jenny told me she called yesterday. If you wrote a note, but as soon as I hung up, the doorbell rang, and
then I had to run off to class." You (in friendly tone of voice): "That's okay. I sure would appreciate from now on if you'd leave me a note." Other: "No problem." In this upbeat conversation, both you and the other person accepted one another's bids for identity as basically thoughtful people. As a result, the conversation ran smoothly. Imagine, though,
how different the outcome would be if the other person didn't accept your role as "nice person": You: ". . . By the way, Jenny told me she called yesterday. If you wrote a note, I guess I missed seeing it." Other (defensively): "Okay, so I forgot. It's not that big a deal. You're not perfect yourself, you know!" Your first bid as "nice, face-saving person" was
rejected. At this point you have the choice of persisting in trying to play the original role: "Hey, I'm not 032-073 Ch02 Adler 2/28/05 9:39 AM Page 61 CHAPTER 2 PERCEPTION, THE SELF, AND COMMUNICATION mad at you, and I know I'm not perfect!" Or, you might switch to the new role of "unjustly accused person," responding with aggravation
"I never said I was perfect. But we're not talking about me here . . ." As this example illustrates, collaboration doesn't mean the same thing as agreement. 64 The small issue of the phone message might mushroom into a fight in which you and the other person both adopt the role of combatants. The point here is that virtually all conversations provide an
arena in which communicators construct their identities in response to the behavior of others. As you read in Chapter 1, communication isn't made up of discrete events that can be separated from one another. Instead, what happens at one moment is influenced by what each party brings to the interaction and by what happened in their relationship
up to that point. IDENTITY MANAGEMENT CAN BE CONSCIOUS OR UNCONSCIOUS At this point you might object to the notion of strategic identity management, claiming that most of your communication is spontaneous and not a deliberate attempt to present yourself in a certain way. However, you might acknowledge that some of your
communication involves a conscious attempt to manage impressions. There's no doubt that sometimes we are highly aware of managing impressions. Most job interviews and first dates are clear examples of conscious identity management. But in other cases we unconsciously act in ways that are really small public performances. 65 For example,
experimental subjects expressed facial disgust in reaction to eating sandwiches laced with a supersaturated saltwater solution only when there was another person present: When they were alone, they made no faces when eating the same sandwiches. 66 Another study showed that communicators engage in facial mimicry (such as smiling or looking
sympathetic in response to another's message) in face-to-face settings only when their expressions can be seen by the other person. When they are speaking over the phone and their reactions cannot be seen, they do not make the same expressions. 67 Studies like these suggest that most of our behavior is aimed at sending messages to others—in
other words, identity management. The experimental subjects described in the last paragraph didn't consciously think, "Somebody is watching me eat this salty sandwich, so I'll make a face," or, "Since I'm in a face-to-face conversation I'll show I'm sympathetic by mimicking the facial expressions of my conversational partner." Reactions like these are
often instantaneous and outside of our conscious awareness. In the same way, many of our choices about how to act in the array of daily interactions aren't deliberate, strategic decisions. Rather, they rely on "scripts" that we have developed over time. You probably have a variety of roles for managing your identity from which to choose in familiar
situations CULTURAL IDIOM might mushroom: might escalate "scripts": practiced responses 61 032-073 Ch02 Adler 62 PART ONE 2/28/05 9:39 AM Page 62 ELEMENTS OF COMMUNICATION CULTURAL IDIOM to play out: to proceed to a conclusion Prepare a face to meet the faces that you meet. T. S. Eliot "The Love Song of J. Alfred Prufrock"
such as dealing with strangers, treating customers at work, interacting with family members, and so on. When you find yourself in familiar situations like these, you probably slip into these roles don't seem quite right do you deliberately construct an approach that reflects how you want the scene to play out. Despite
the claims of some theorists, it seems like an exaggeration to suggest that all behavior is aimed at making impressions. Young children certainly aren't strategic communicators. A baby spontaneously laughs when pleased, and cries when sad or uncomfortable, without any notion of creating an impression in others. Likewise, there are almost certainly
times when we, as adults, act spontaneously. But when a significant other questions the presenting self we try to present, the likelihood of acting to prop it up increases. This process isn't always conscious: At a nonconscious level of awareness we monitor others' reactions and swing into action when our face is threatened—especially by significant
others.68 PEOPLE DIFFER IN THEIR DEGREE OF IDENTITY MANAGEMENT Some people are much more aware of their impression management behavior and others' reactions, adjusting their communication to create the desired impression. By contrast,
low self-monitors express what they are thinking and feeling without much attention to the impression their behavior creates.69 There are certainly advantages to being a high self-monitor.70 People who pay attention to themselves are generally good actors who can create the impression they want, acting interested when bored, or friendly when
they really feel quite the opposite. This allows them to handle social situations smoothly, often putting others at ease. They are also good "people-readers" who can adjust their behavior to get the desired reaction from others. Along with these advantages, there are some potential disadvantages to being an extremely high self-monitor. The analytical
nature of high self-monitors may prevent them from experiencing events completely, because a portion of their attention will always be viewing the situation from a detached position. High self-monitors change roles often, they may have a hard
time knowing themselves how they really feel. People who score low on the self-monitoring scale live life quite differently from their more self-conscious counterparts. They have a simpler, more focused idea of who they want to be. Low self-monitoring scale live life quite differently from their more self-conscious counterparts. They have a simpler, more focused idea of who they want to be. Low self-monitoring scale live life quite differently from their more self-conscious counterparts.
```

```
act in more or less the same way regardless of the situation. This means that low self-monitors are easy to read. "What you see is what you get" might be their motto. Although this lack of flexibility may make their social interaction less smooth in many situations, low self-monitors can be counted on to be straightforward communicators. By now it
should be clear that neither extremely high nor low self-monitoring is the ideal. There are some situations when paying attention to yourself and adapting your behavior can be useful, but there are other situations when reacting without considering the effect on others is a better approach. This need for a range of behaviors demonstrates again the
notion of communicative competence outlined in Chapter 1: Flexibility is the key to successful relationships. 032-073 Ch02 Adler 2/28/05 9:39 AM Page 63 CHAPTER 2 PERCEPTION, THE SELF, AND COMMUNICATION Why Manage Impressions? Why bother trying to shape others' opinions? Sometimes we create and maintain a front to follow social
rules. As children we learn to act polite, even when bored. Likewise, part of growing up consists of developing a set of manners for various occasions:meeting strangers, attending school, going to religious services, and so on. Young children who haven't learned all the do's and don'ts of polite society often embarrass their parents by behaving
inappropriately ("Mommy, why is that man so fat?"); but by the time they enter school, behavior that might have been excusable or even amusing just isn't acceptable. Good manners are often aimed at making others more comfortable. For example, able-bodied people often mask their discomfort upon encountering someone who is disabled by acting
nonchalant or stressing similarities between themselves and the disabled person.71 Social rules govern our behavior in a variety of settings. It would be impossible to keep a job, for example, without meeting certain expectations. Salespeople are obliged to treat customers with courtesy. Employees need to appear reasonably respectful when talking to
the boss. Some forms of clothing would be considered outrageous at work. By agreeing to take on a job, you are signing an unwritten contract that you will present a certain face at work, whether or not that face reflects the way you might be feeling at a particular moment. Even when social roles don't dictate the proper way to behave, we often
manage impressions for a second reason: to accomplish personal goals. You might, for example, dress up for a visit to traffic court in the hope that your request that they keep their dog off your lawn. We also
try to create a desired impression to achieve one or more of the social needs described in Chapter 1: affection, inclusion, control, and so on. For instance, you might act more friendly and lively than you feel upon meeting a new person, so that you will appear likable. You could sigh and roll your eyes when arguing politics with a classmate to gain an
advantage in an argument. You might smile and preen to show the attractive stranger at a party that you would like to get better acquainted. In situations like these examples show that it is difficult—even impossible—not to create impressions. After all, you have to send
some sort of message. If you don't act friendly when meeting a stranger, you have to act aloof, indifferent, hostile, or in some other manner. If you don't act businesslike, you have to behave in an alternative way: casual, goofy, or whatever. Often the question isn't whether or not to present a face to others; the question is only which face to present.
How Do We Manage Impressions? How do we create a public face? In an age when technology provides many options for communication, the answer depends in part on the communication channel chosen. FACE-TO-FACE IMPRESSION MANAGEMENT In face-to-face interaction, communicators can manage their front in three ways: manner,
appearance, and setting. 72 Manner consists of a communicator's words and nonverbal actions. CULTURAL IDIOM a front: a pretense putting "your best foot forward": making the best appearance possible 63 032-073 Ch02 Adler 64 PART ONE 2/28/05 9:39 AM Page 64 ELEMENTS OF COMMUNICATION Physicians, for example, display a wide
variety of manners as they conduct physical examinations. Some are friendly and conversational, whereas others adopt a sticks to: focuses solely on brusque and impersonal approach. Still others are polite but businesslike. Much of a communicator's manner comes from what he or she says. A doctor who relust after: strong desire to own members
details about your interests and hobbies is quite different from one who sticks to clinical questions. Along with the content of speech, nonverbal behaviors play a big role in creating impressions. A doctor who greets you with a friendly smile and a handshake comes across quite differently from one who gives nothing more than a curt nod. The same
principle holds in personal relationships. Your manner plays a major role in shaping how others view you. Chapters 3 and 5 will describe in detail how your manner sends messages; rather, the question is whether or not these
messages will be intentional. Along with manner, a second dimension of impression management is appearance—the personal items people use to shape an image. A physician's white lab coat and but identity is part of all messages are about identity, pearance is part of creating a professional image. A physician's white lab coat and but identity is part of all messages are about identity, pearance is part of creating a professional image.
uniform both set the wearer apart as someone special. A tailored Michael L. Hecht suit or a rumpled outfit create very different impressions in the business world. Off the job, clothing is just as important. We choose clothing that sends a message about ourselves, sometimes trendy and sometimes traditional. Some people dress in ways that accent their
sexuality, whereas others hide it. Clothing can say "I'm an athlete," "I'm an environmentalist." Along with dress, other aspects of appearance play a strong role in impressions is through the choice of setting—physical items we use to
influence how others view us. Consider the artifacts that people use to decorate the space where they live. For example, the posters and other items a college student uses to decorate the automobile is a major part of impression management. This explains why
many people lust after cars that are far more expensive and powerful than they really need. A sporty convertible or fancy imported coupe doesn't just get drivers from one place to another: It also makes statements about the kind of people they are. The physical setting we choose and the way we arrange it are other important ways to manage
impressions. What colors do you choose for the place you live? What artwork? What music do you play? Of course, we choose a setting that we enjoy; but in many cases we create an environment that will present the desired front to others. If you doubt this fact, just recall the last time you straightened up the house before important guests arrived.
Backstage you might be comfortable with a messy place, but your public front—at least to some people—is quite different. "I loved your E-mail, but I thought you'd be older." CHAPTER 2 PERCEPTION, THE SELF, AND COMMUNICATION IMPRESSION MANAGEMENT IN MEDIATED COMMUNICATION At first glance, computer-mediated communication (CMC) seems to have limited potential for identity management. E-mail messages, for example, appear to lack the "richness" of other channels. They don't convey the
postures, gestures, or facial expressions that are an important part of face-to-face communication scholars have begun to
recognize that what is missing in computer-mediated communication can actually be an advantage for communicators who want to manage the impressions. They can choose the desired level of clarity or ambiguity, seriousness or humor, logic or
emotion. Unlike face-to-face communication, electronic correspondence allows a sender to say difficult things without forcing the receiver to ignore a message rather than give an unpleasant response. Options like these show that CMC can serve as a tool for impression management at least as well
as face-to-face communication. In CMC, communicators have much greater control over what kinds of information to reveal or hide. A Web page designer who doesn't want to be judged by his appearance (too young/old, not physically attractive, male or female) can hide or manipulate these characteristics in ways that aren't possible in face-to-face
settings. A telecommuter working at home can close a big deal via computer while chomping on an apple, muttering about the client, or even belching—none of which is recommended in face-to-face interaction! Along with providing greater control over what to say, mediated channels give communicators greater control over how to shape a message in
ways that enhance the management of their own identity and preserve the face of others. On the Internet, it's possible to shape a message until it creates just the desired impression. You can edit remarks to get just the right tone of sincerity, humor, irony, or concern—or not send any message at all, if that is the best way to maintain face. Some
statistics from a survey by the Pew Internet and American Life Project reveals how much people—especially younger ones—manage their identities on the Web. Fifty-six percent of online teens had more than one screen name or email address, and even
friends. Roughly a quarter of the online teens said they had given false information about themselves in e-mails or instant messages. 76 Recent research has revealed that communicators who are concerned with impression management don't always prefer computer-mediated channels. People are generally comfortable with face-to-face interaction
when they feel confident that others support the image they want to present. On the other hand, people are more likely to prefer mediated channels when their own self-presentation is threatened. 77 Impression Management and Honesty After reading this far, you might think that impression management sounds like an academic label for
manipulation or phoniness. If the perceived self is the "real" you, it might seem that any behavior that contradicts it would be dishonest. 65 CULTURAL IDIOM straightened up: cleaned and/or organized "richness": completeness Public Selves on Parade But in any case he took care to avoid catching anyone's eye. First of all, he had to make it clear to
those potential companions of his holiday that they were of no concern to him whatsoever. He stared through them, round them, over them—eyes lost in space. The beach might have been empty. If by chance a ball was thrown his way, he looked surprised; then let a smile of amusement lighten his face (Kindly Preedy), looked round dazed to see that
there were people on the beach, tossed it back with a smile to himself and not a smile at the people, and then resumed carelessly his nonchalant survey of space. But it was time to institute a parade of the Ideal Preedy. By devious handling he gave any who wanted to look a chance to see the title of his book—a Spanish translation of
Homer, classic thus, but not daring, cosmopolitan too—and then gathered together his beach-wrap and bag into a neat sand-resistant pile (Methodical and Sensible Preedy), after all). William Sansom A Contest of Ladies 032-073_Ch02_Adler
66 2/28/05 PART ONE 9:39 AM Page 66 ELEMENTS OF COMMUNICATION UNDERSTANDING COMMUNICATION TECHNOLOGY VIRTUAL REALITY: WHO AM WE? This provocative piece describes the world of MUDs, a type of online gaming where players construct one or sometimes many identities. It extends the notion that we have multiple
selves, and raises profound questions about who we are and how we communicate with others. In the early 1970s, the face-to-face role-playing game Dungeons and Dragons swept the game culture. The term "dungeon" persisted in the high-tech culture to connote a virtual place. So when virtual spaces were created that many computer users could
share and collaborate within, they were deemed Multi-User Dungeons or MUDs, a new kind of social virtual money, and rise and fall in social status. A virtual character can also die. A 26-year-old clerical worker says, "I'm not one
thing, I'm many things. Each part gets to be more fully expressed in MUDs, I feel more like 'myself' when I'm MUDding." In real life, this woman sees her world as too narrow to allow her to manifest certain aspects of the person she feels herself to be. Creating screen personae
is thus an opportunity for self-expression, leading to her feeling more like her true self when decked out in an array of virtual masks. As a new social experience, MUDs pose many psychological questions: If a persona in a role-playing game drops defenses that the player in real life has been unable to abandon, what effect does this have? What if a
person enjoys success in some area (say, flirting) that the player has not been able to achieve? Doug is a Midwestern college junior. He plays four characters distributed across three different MUDs. One is a seductive woman. One is a macho, cowboy type whose selfdescription stresses that he is a "Marlboros rolled in the T-shirt sleeve kind of guy."
The third is a rabbit of unspecified gender who wanders its MUD introducing people to each other, a character he calls Carrot. Doug says, "Carrot is so lowkey that people let it be around while they are having private conversations. So I think of Carrot as my passive, voyeuristic character." Doug's fourth character is one that he plays only on a MUD
in which all the characters are furry animals. "I'd rather not even talk about that character because my anonymity there is very important to me,"Doug says. "Let's just say that on FurryMUDs I feel like a sexual tourist." Stewart, a 23-year-old physics graduate student, uses MUDs to have experiences he can't imagine for himself in RL [Real Life]. His
only friend is his roommate, another physics student whom he describes as even more reclusive than himself. He has had heart trouble since he was a child; one small compass. Stewart is logged on to one MUD or another for at least
40 hours a week. It seems misleading to call what he does there playing. He spends his time constructing a life that is more expansive than the one he lives in physical reality. Stewart, who has traveled very little and has never been to Europe, explains with delight that his favorite MUD, although played in English, is physically located on a computer
in Germany and has many European players. On the German MUD, Stewart shaped a character named Achilles, but he asks his MUD friends to call him Stewart as much as possible. He wants to feel that his real life. Stewart insists that he does
not role play, but that MUDs simply allow him to be a better version of himself. Beyond expanding his social world, MUDs have brought Stewart the only romance and intimacy he has ever known little success in dating and romantic
relationships, was able to charm this desirable player. The intimacy Achilles experienced during his courtship of Winterlight's hand. When she accepted, they had a formal engagement ceremony on the MUD. In real life, Stewart felt constrained by his health problems, his
shyness and social isolation, and his narrow economic straits. In the MUD, he bypassed these obstacles, at least temporarily. 032-073 Ch02 Adler 2/28/05 9:39 AM Page 67 CHAPTER 2 Gender-swapping on MUDs is not a small part of the game action. Case, a 34-year-old industrial designer who is happily married to a co-worker, is currently MUDding
as a female character. Case describes his RL persona as a nice guy, a "Jimmy Stewart type like my father." He says that in general he likes his father and he likes himself, but he feels he pays a price for his low-key ways. In particular, he feels at a loss when it comes to confrontation, both at home and in business dealings. Case likes MUDding as a
female because it makes it easier for him to be aggressive and confrontational. Case plays several online "Katharine Hepburn types," strong, dynamic, "out there" women who remind him of his mother, "who says exactly what's on her mind and is a take-noprisoners sort." For Case, if you are assertive as a man, it is coded as "being a bastard." If you are
assertive as a woman, it is coded as "modern and together." Some women who plays male characters desire invisibility or permission to be more outspoken or aggressive. "I was born in the South and taught that girls don't speak up to disagree with men," says Zoe, a 34-year-old woman who plays male characters on four MUDs. "I got really
good at playing a man, so good that whoever was on the system would accept me as a man and talk to me as a man and talk talk t
Virtual sex, whether in MUDs or in a private room on a commercial online service, consists of two or more players typing descriptions of physical actions, verbal statements, and emotional reactions for their online experience. Martin and Beth,
both 41, have been married for 19 years and have four children. Early in their marriage, Martin decided he never wanted to do it again. When Martin discovered MUDs he was thrilled. "I really am monogamous. I'm
really not interested in something PERCEPTION, THE SELF, AND COMMUNICATION outside my marriage. But being able to have, you know, a [virtual] romance is kind of cool." Martin decided to tell beth about his MUD sex life and she decided to tell him that she does not mind. Beth has made a conscious decision to consider Martin's sexual
relationships on MUDs as more like his reading an erotic novel than like his having a rendezvous in a motel room. For Martin, his online affairs are a way to fill the gaps of his youth, to broaden his sexual experience without endangering his marriage. Other partners of virtual adulterers do not share Beth's accepting attitude. Janet, 24, a secretary at a
New York law firm, is very upset by her husband TIm's sex life in cyberspace. This distressed wife struggles to decide whether her husband is unfaithful when his persona collaborates on writing real-time erotica with another persona in cyberspace. This distressed wife struggles to decide whether her husband is unfaithful when his persona collaborates on writing real-time erotica with another persona in cyberspace. This distressed wife struggles to decide whether her husband is unfaithful when his persona collaborates on writing real-time erotica with another persona in cyberspace.
turns out to be a 19-year-old male college freshman? What if "she" is an infirm 80-year-old man in a nursing home? And even more disturbing, what if she is a 12-year-old girl? Or a 12-year-old girl? Or a 12-year-old man in a nursing home? And even more disturbing, what if she is a 12-year-old girl? Or a 12-year-old girl? Or a 12-year-old man in a nursing home? And even more disturbing, what if she is a 12-year-old girl? Or a 12-year
primary partner? Is infidelity in the head or in the body? Is it in the desire or in the action? What constitutes the violation of trust? And once we take virtuality seriously as a way of life, we need a new language for talking about the simplest things. Each individual must ask: What is the nature of my relationships? What are the limits of my
responsibility? And even more basic: Who and what am I? People can get lost in virtual worlds. Some are tempted to think of life in cyberspace as insignificant, as escape or meaningless diversion. It is not. Our experiences there are serious play. We belittle them at our risk. We must understand the dynamics of virtual experience both to foresee who
might be in danger and to put these experiences to best use. Without a deep understanding of the many selves that we express in the virtual, we cannot use our experiences to best use. Without a deep understanding of the many selves that we express in the virtual, we cannot use our experiences to best use. Without a deep understanding of the many selves that we express in the virtual, we cannot use our experiences to best use.
of others: protect the dignity of others to make a quick buck: to earn money with little effort There certainly are situations where impression management is dishonest. A manipulative date who pretends to be affectionate in order to gain sexual favors is clearly unethical and deceitful. So are job applicants who lie about academic records to get hired
or salespeople who pretend to be dedicated to customer service when their real goal is to make a quick buck. But managing impressions doesn't necessarily make you a liar. In fact, it is almost impossible to imagine how we could communicate effectively without making decisions about which front to present in one situation or another. It would be
ludicrous for you to act the same way with strangers as you do with close friends, and nobody would show the same face to a two-year-old as to an adult. Each of us has a repertoire of faces—a cast of characters—and part of being a competent communicator is choosing the best role for the situation. Consider a few examples:
teach a friend a new skill: playing the guitar, operating a computer program, or sharpening a tennis backhand. Your friend is making slow progress with the skill, and you are pretty sure that the feeling is mutual. You feel an obligation to
spend most of your time with the person with whom you came, but the opportunity here is very appealing. At work you face a belligerent customer. You don't believe that anyone has the right to treat you this way. A friend or family member makes a joke about your appearance that hurts your feelings. You aren't sure whether to make an issue of the
remark or pretend that it doesn't bother you. In each of these situations—and in countless others every day—you have a choice about how to act. It is an oversimplification to say that there is only one honest way to behave in each circumstance and that every other response would be insincere and dishonest. Instead, impression management involves
deciding which face—which part of yourself—to reveal. For example, when teaching a ETHICAL CHALLENGE HONESTY AND MULTIPLE IDENTITIES Your text argues that presenting different identities to the world isn't inherently dishonest. Nonetheless, there are certainly cases when it is deceitful to construct an identity that doesn't match your
private self. You can explore the ethics of multiple identities by identifying two situations from your life: 1. A time when you presented a public identity that didn't match your private self in a manner that wasn't unethical. 2. A situation (real or hypothetical) in which you have presented or could present a dishonest identity. Based on the situations you
and your classmates present, develop a code of ethics that identifies the boundary between ethical and unethical identity management. 032-073 Ch02 Adler 2/28/05 9:39 AM Page 69 CHAPTER 2 PERCEPTION, THE SELF, AND COMMUNICATION 69 new skill you can choose to display the patient instead of the impatient side of yourself. In the same
way, at work you have the option of acting hostile or nondefensive in difficult situations. With strangers, friends, or family you can choose whether or not to disclose your feelings. Which face to show to others is an important decision, but in any case you are sharing a real part of yourself. You may not be revealing everything—but, as you will learn in
Chapter 6, complete selfdisclosure is rarely appropriate. SUMMARY Perceptions of others are always selective and are often distorted. The chapter began by describing how personal narratives shape our perceptions. It then outlined several perceptions of others are always selective and are often distorted. The chapter began by describing how personal narratives shape our perceptions. It then outlined several perceptions of others are always selective and are often distorted. The chapter began by describing how personal narratives shape our perceptions.
psychological influences, cultural factors affect perceptions. Increasing understanding of others and hence communicating more effectively with them. Perceptions of one's self are just as subjective as
perceptions of others, and they influence communication at least as much. Although individuals are born with some innate personality characteristics, the self-concept is shaped dramatically by communication with others, as well as by cultural factors. Once established, the self-concept is shaped dramatically by communication with others, as well as by cultural factors.
we behave and how others respond to us. Impression management consists of strategic communication designed to influence others' perceptions of an individual. Impression management operates when we seek, consciously or unconsciously, to present one or more public faces to others. These faces may be different from the private, spontaneous
behavior that occurs outside of others' presence. Identity management is usually collaborative: Communication goes most smoothly when we communicators are highly conscious of their own behavior, whereas others are low self-monitors who
are less aware of how their words and actions affect others. Impression management occurs for two reasons. In many cases it aims at following social rules and conventions. In other case, communicators engage in creating impressions by managing their manner, appearance
and the settings in which they interact with others. Although impression management might seem manipulative, it can be an authentic form of communication. Because each person has a variety of faces that he or she can present, choosing which one to present need not be dishonest. KEY TERMS empathy 43 face 58 facework 58 impression
1. Exploring Narratives Think about a situation where relational harmony is due to you and the other person use different narratives to describe the same situation. What are the consequences of having different narratives in this situation? 2.
 Experiencing Another Culture Spend at least an hour in a culture that is unfamiliar to you and where you are a minority. Visit an area where another cultural, age, or ethnic group is the majority. Attend a meeting or patronize an establishment where you are in the minority. Observe how communication practices differ from those of your own cultures.
Based on your experience, discuss what you can do to facilitate communication with people from other cultural backgrounds whom you may encounter in your everyday life. (As you develop a list of ideas, realize that what you might consider helpful behavior could make communicators from different cultures even more uncomfortable.) 3. Empathy
Exercise Choose a disagreement you presently have with another person or group. The disagreement might be a personal one—such as an argument about how to settle a financial problem or who is to blame for a present state of affairs—or it might be a dispute over a contemporary public issue, such as the right of women to obtain abortions on
demand or the value of capital punishment. 1. In three hundred words or so, describe your side of the issue. State why you believe as you do, just as if you were presenting your position to an important jury. 2. Now take three hundred words or so, describe in the first-person singular the other person's perspective of the same issue. For instance, if
you are a religious person, write this section as if you were an atheist: For a short while get in touch with how the description you wrote to your "opponent," the person whose beliefs are different from yours. Have that person read your account and correct any statements that don't reflect his or her
position accurately. Remember: You're doing this so that you can more clearly understand how the issue looks to the other person. 4. Make any necessary corrections in the account you wrote, and again show it to your partner sign your paper to indicate this. 5
Now record your conclusions to this experiment. Has this perceptual shift made any difference in how you view the issue or how you feel about your partner? 4. Perception Checking Practice Practice your perception-checking ability by developing threepart verifications for the following situations: 1. You made what you thought was an excellent
suggestion to an instructor. The instructor looked uninterested but said she would check on the matter right away. Three weeks have passed, and nothing has changed. 2. A neighbor and good friend has not responded to your "Good morning" for three days in a row. This person is usually friendly. 3. You haven't received the usual weekly phone call
from the folks back home in over a month. The last time you spoke, you had an argument about where to spend the holidays. 4. An old friend with whom you have shared the problems of your love life for years has recently changed when around you: The formerly casual hugs and kisses have become longer and stronger, and the occasions where you
"accidentally" brush up against one another have become more frequent. 5. Identifying Your Identities Keep a one-day log listing the identities you create in different situations: at school, at work, with strangers, various family members, and different friends. For each identity, 1. Describe the persona you are trying to project (e.g., "responsible son or
daughter," "laid-back friend," "attentive student.") 2. Explain how you communicate to promote this identity. What kinds of things do you say (or not say)? How do you act? 032-073 Ch02 Adler 2/28/05 9:39 AM Page 71 CHAPTER 2 FOR FURTHER EXPLORATION Print Resources PERCEPTION, THE SELF, AND COMMUNICATION 71 Macrae, C. Neil

Computer-Mediated Communication and Relationships,"in Mark L. Knapp and John A. Daly, eds., Handbook of Interpersonal Communication, 3rd ed. Thousand Oaks, CA: Sage, 2002. The authors point out some ways in which computer-mediated communication differs from faceto-face interaction. A section of this reading focuses on how identity
management operates in online relationships. 032-073 Ch02 Adler 72 PART ONE 2/28/05 9:39 AM Page 72 ELEMENTS OF COMMUNICATION Feature Films For descriptions of other movies that illustrate nonverbal communication, see the CD-ROM that came with this book, and the Understanding Human
Communication Web site at www.oup.com/us/uhc. Building Empathy Freaky Friday (2003). Rated PG. Through a freak event, mother Tess Coleman (Jamie Lee Curtis) and her teenage daughter Annabell's world, she has little empathy for the issues in her
daughter's life, such as Annabell's struggles with a classmate who bullies her and a teacher who treats her unfairly. Once Tess spends time in Annabell's struggles with a classmate who bullies her and a teacher who treats her unfairly. Once Tess spends time in Annabell's struggles with a classmate who bullies her and a teacher who treats her unfairly.
when Annabell becomes Tess for a few days, she learns that it's not easy to balance the many responsibilities and demands of adulthood, parenthood, and a career. Forgoing an Identity Real Women Have Curves (2002). Rated PG-13. Ana (America Ferrera) is overweight and sensitive about her appearance. Her mother, Carmen (Lupe Ontiveros), calls and career.
her daughter "Fatty" both to her face and in front of others. As she comes of age, Ana decides her physical appearance is not a problem to be solved but a fact to be celebrated. She realizes that her mother's criticisms come from her own lack of self-esteem. Once Anna comes to grips with her appearance, she "evangelizes" the other women in the dress
factory where she works. In a humorous and poignant scene, Ana and her coworkers strip down to their underwear on a hot day in the factory and compare notes about their weight, stretch marks, and cellulite. Ana declares, "Ladies, look at how beautiful we are"—and her colleagues revel in that revelation. This story shows that appraisals from and
comparisons with others can lead to low self-esteem, but also that it's possible to reject negative messages and change one's self-appraisal. Whale Rider (2002). Rated PG-13. In present-day New Zealand, twelve-year-old Pai (Keisha Castle-Hughes) is growing up in an all-Maori community. As leader of the people, her grandfather Koro's most important
task is to find and train their next chief. Maori tradition mandates that chiefs are always males, but Pai believes that she could become the next leader. Despite his love for his granddaughter, Koro fiercely resists this ambition. He responds to Pai's determination by almost constantly criticizing her and questioning her achievements. The harder Pai
tries, the more critical her grandfather becomes. His judgments cause Pai great pain. From a sociological angle, the film captures the challenge of adapting long-standing traditions to social change. But from a communication perspective, the film illustrates that it is difficult but possible to create a unique identity in the face of rejection by a powerful
significant other with different ideas about who we should be. Perception Is Subjective Shallow Hal (2001). Rated PG-13. Hal Larsen (Jack Black) is an aging, out-of-shape lounge lizard who foolishly thinks he can seduce attractive women. After being hypnotized by selfhelp guru Tony Robbins, Hal begins to look beyond appearances and see the inner
beauty of people. When Hal first sees Rosemary (Gwyneth Paltrow), her beauty takes his breath away. But whereas Hal sees Rosemary as a willowy beauty, in reality she is a grossly obese woman who draws snickers and stares from clear-eyed spectators. Although the film will never be considered a classic, it does illustrate in an exaggerated way that
perception is subjective, showing that what we think about one another (and ourselves) is more powerful than a more objective perspective. The film also illustrates the power we have to shape one another (and ourselves) is more powerful than a more objective perspective. The film also illustrates the power we have to shape one another (and ourselves) is more powerful than a more objective perspective. The film also illustrates the power we have to shape one another (and ourselves) is more powerful than a more objective perspective. The film also illustrates the power we have to shape one another (and ourselves) is more powerful than a more objective perspective. The film also illustrates the power we have to shape one another (and ourselves) is more powerful than a more objective perspective.
PERCEPTION, THE SELF, AND COMMUNICATION 73 Self-Fulfilling Prophecy Identity Management Class Act (1992). Rated PG-13. In and Out (1997). Rated PG-13. In and Out (1997). Rated PG-13. Class Act follows the lives of brilliant, nerdish high school student Duncan Pinderhughes (Christopher Reid) and delinquent Blade Brown (Christopher Martin), who has been given the
alternative of staying in school or going to jail. A mixup in school records puts Pinderhughes into the remedial program with troublemakers and losers, while Brown winds up in the gifted students. The story is a case study in self-fulfilling prophecies: After the students are labeled, they wind up matching the expectations that are imposed on them.
Because Brown has the reputation of being smart, he gets better grades no matter what he does. By contrast, when Pinderhughes is labeled as a loser, he gets poor evaluations no matter how hard he tries. Howard Brackett (Kevin Kline) is a high school English teacher in an idyllic small Indiana town. Brackett is dumbfounded to hear one of his former
students accept an Oscar by publicly thanking him and then announcing—to most of the world—that Brackett is gay. Not surprisingly, pandemonium ensues as Brackett feverishly defends his heterosexual identity, often with macho posturing that is so overdone that it becomes a parody of traditional male behavior. This lighthearted comedy provides
an entertaining illustration of how much communication is dedicated to managing one's identity. Pay It Forward (2000). Rated PG-13. Trevor (Haley Joel Osment) is a junior high schooler whose teacher, Mr. Simonet (Kevin Spacey), gives a provocative assignment: Think of an idea that could change the world. Trevor's idea is simple but profound: You
have to do something that really helps people. It has to be something they can't do by themselves. The recipients of the favor "pay it forward" by doing the same thing for three other people into powerful agents who
really do help make the world a better place. You've Got Mail (1999). Rated PG. Joe Fox (Tom Hanks) and Kathleen Kelly (Meg Ryan) are thirty-something New Yorkers who detest each other—at least in person. Face-to-face, Kathleen despises Joe because his discount bookstore chain threatens to bankrupt Kathleen's family-owned bookshop. She also
hates Joe's arrogant, selfabsorbed style of communicating. But in cyberspace, Joe seems like a different person. Unknown to both Joe and Kathleen are tender and self-
disclosing. She falls for NY152 without knowing that the same man she can't stand in person writes the enchanting messages. For students of communication, this romance demonstrates that each of us has many identities and that the way we present ourselves can shape the fate of our relationships. 074-113 Ch03 Adler 2/28/05 9:40 AM Page 74
AFTER STUDYING THE MATERIAL IN THIS CHAPTER You should understand: 1. The symbolic, person-centered nature of language. 2. Phonological, semantic, syntactic, and pragmatic rules that govern language and the skills to deal with each. 5. The
gender and nongender factors that characterize the speech of men and women. 6. The verbal styles that distinguish various cultures, and the affect that language can have on worldview. You should be able to: 1. Discuss how you and others use syntactic, semantic, phonological, and pragmatic rules and how their use affects a message's
comprehension. 2. Identify at least two ways in which language has shaped your attitudes. 3. Identify at least two ways in which language reflects your attitudes. 4. Recognize and suggest alternatives for fact-inference and fact
opinion confusion and for emotive statements. 6. Suggest appropriate alternatives for unnecessary or misleading euphemisms and equivocal statements. 7. Identify the degree to which your speech reflects gender 2/28/05 9:40 AM Page 75
CHAPTER HIGHLIGHTS Language has several important characteristics: Gender plays an important role in the way language operates. It is symbolic.
Male and female conversational style varies in some interesting ways. 

Gender isn't always the most important factor in shaping language use. 

It is governed by several types of rules, and understanding those rules helps us understanding those rules helps us understanding those rules.
toward things and toward one another. It can reflect the way we feel about things and people. Some kinds of language can create problems by unnecessarily disrupting relationships confusing others.
notions of what language styles are and aren't appropriate. 
The language we speak can shape the way we view the world. CHAPTER THREE Language 074-113 Ch03 Adler 76 2/28/05 PART ONE 9:40 AM Page 76 ELEMENTS OF COMMUNICATION . . . words strain, Crack and sometimes break, under the burden Under the tension, slip, slide,
perish, Decay with imprecision, will not stay in one place, Will not stay in one place
In the following pages we will explore the nature of linguistic communication. By the time you have finished reading this chapter, you will better appreciate the complexity of language, its power to shape our perception of people and events, and its potential for incomplete and inaccurate communication. Perhaps more importantly, you will be better
equipped to use the tool of language more skillfully to improve your everyday interaction. THE NATURE OF LANGUAGE Humans speak about ten thousand dialects. 1 Although most of these sound different from one another, all possess the same characteristics of language: a collection of symbols governed by rules and used to convey messages
between individuals. A closer look at this definition can explain how language operates and suggest how we can use it more effectively. Language Is Symbolic There's nothing natural about calling your loyal four-footed companion a "dog" or the object you're reading right now a "book."These words, like virtually all language, are symbols—arbitrary
constructions that represent a communicator's thoughts. Not all linguistic symbols are spoken or written words. Speech and writing aren't the only forms of language. Sign language, as "spoken or written words. Speech and writing aren't the only forms of language. Sign languages spoken around there are literally hundreds of different sign languages spoken around the pantomime it might seem. There are literally hundreds of different sign languages spoken around the pantomime it might seem.

Language, Chinese Sign Language—even Australian Aboriginal and Mayan sign languages. Symbols are more than just labels: They are the world. You can prove this fact by trying a simple experiment. Work up some saliva in your mouth, and then spit it into a glass. Take a good look, and then drink it up. Most people find this
process mildly disgusting. But ask yourself why this is so. After all, we swallow our own saliva all the time. The answer arises out of the symbolic labels we use. After the saliva is in the glass, we call it spit and think of it in a different way. In other words, our reaction is to the name, not the thing. The naming process operates in virtually every
situation. How you react to a stranger will depend on the symbols you use to categorize him or her: gay (or straight), religious (or not), attractive), and so on. Meanings Are in People, Not Words Ask a dozen people what the same symbol means, and you are likely to get twelve different answers. Does an American flag bring up
associations of patriots giving their lives for their country? Fourth of July parades? Cultural imperialism? How about a cross: What does it represent? The message of Jesus Christ? Fire-lit rallies of Ku Klux Klansmen? Your childhood Sunday school? The necklace your sister always wears? As with physical symbols, the place to look for meaning in
language isn't in the words themselves, but rather in the way people make sense of them. One unfortunate example of this fact occurred in Washington, DC, when the newly appointed city ombudsman used the word "niggardly" to describe an approach to budgeting. 4 Some African-American critics accused him of uttering an unforgivable racially appointed city ombudsman used the word "niggardly" to describe an approach to budgeting. 4 Some African-American critics accused him of uttering an unforgivable racially appointed city ombudsman used the word "niggardly" to describe an approach to budgeting. 4 Some African-American critics accused him of uttering an unforgivable racially appointed city ombudsman used the word "niggardly" to describe an approach to budgeting. 4 Some African-American critics accused him of uttering an unforgivable racially appointed city ombudsman used the word "niggardly" to describe an approach to budgeting.
slur. His defenders pointed out that the word, which means "miserly," is derived from Scandinavian languages and that it has no link to the racial slur it resembles. Even though the criticisms eventually died away, they illustrate that, correct or not, the meanings people associate with words have far more significance than do their dictionary definitions
User Linguistic theorists C.K.Ogden and I.A.Richards illustrated the fact that meaning are social constructions in their well-known "triangle of meaning" (Figure 3-1).5 This model shows that there is only an indirect relationship—indicated by a broken line—between a word and the thing it claims to represent. Some of these "things" or referents do not
feminism without ever realizing that you and (Symbol) (Referent) the other person are using the word to represent entirely different things. The same goes for environmentalism, Republicans, rock music, and thousands upon thousands upon thousands of other symbols. Words don't mean; people do—and often in widely diffigure 3-1 Ogden and Richards's Triangle of
ferent ways. Meaning 77 074-113_Ch03_Adler 78 2/28/05 PART ONE 9:40 AM Page 78 ELEMENTS OF COMMUNICATION UNDERSTANDING COMMUNICATION UNDERSTANDING COMMUNICATION TECHNOLOGY TRANSLATION ON THE WEB Can technology solve the ages-old problem of allowing us to understand people who speak different languages? Several sites on the World
but far from perfect. AltaVista's software works well enough for most simple messages. For example, the request "Please send me information on travel in Latin America." came through almost perfectly when first translated into Spanish and then back to English. A translation of the announcement "My flight from Miami arrives at 9:00 P.M." changed
prepositions, but it was understandable when it came back as "My flight of Miami arrives 9:00 P.M." Translation software begins to show its limitations when literal conversions fail to capture the colloquial meaning of a word. For example, the message "This is a deceptive
translation of "I'm down in the dumps" came back as "I am feeling downwards in emptyings." Computerized translations aren't advised for communicators who want to build and maintain personal relationships. A simple example shows why: The flattering confession "I would like to get to know you better" was transformed into the confusing translations aren't advised for communicators who want to build and maintain personal relationships. A simple example shows why:
statement "It wanted to familiarize to me with him better"—not the kind of message that is likely to win friends and influence people. Despite their shortcomings, computerized translation programs can provide at least a sense of what is being expressed in an unfamiliar language. At the same time, their flaws demonstrate that understanding semantic
and pragmatic rules is a uniquely human ability—at least for now. Despite the potential for linguistic problems, the situation isn't hopeless. We do, after all, communicate with one another reasonably well most of the time. And with enough effort, we can clear up most of the misunderstandings that do occur. The key to more accurate use of language is
to avoid assuming that others interpret words the same way we do. In truth, successful communication occurs when we negotiate the meaning of a statement. 6 As one French proverb puts it: The spoken word belongs half to the one who speaks it and half to the one who hears. Language Is Rule-Governed Languages contain several types of
rules. Phonological rules govern how words sound when pronounced. For instance, the words champagne, double, and occasion are spelled identically in French and English, but all are pronounced differently. Nonnative speakers learning English are plagued by inconsistent phonological rules, as a few examples illustrate: He could lead if he would ge
the lead out. A farm can produce produce produce produce. The dump was so full it had to refuse refuse contine to present is a good time to present the present is a good time to present is a good time
rules aren't the only ones that govern the way we use language to communicate. Syntactic rules govern the structure of language—the way symbols can be arranged. For example, correct English syntax requires that every word contain at least one vowel and prohibits sentences such as "Have you the cookies brought?" which is a perfectly acceptable
word order in German. Although most of us aren't able to describe the syntactic rules that govern our language, it's easy to recognize their existence by noting how odd a statement that violates them appears. Technology has spawned subversions of English with their own syntactic rules. For example, users of instant messaging on the Internet have
devised a streamlined version of English that speeds up typing in real-time communication (although it probably makes teachers of composition grind their teeth in anguish): A: B: A: B: A: B: A: B: A: Be at home? yup yup ok I'm getting offline now no! why? i need t study for finals u can call me tho bye kbye Semantic rules deal with the meaning of
specific words. Semantic rules are what make it possible for us to agree that "bikes" are for reading; they also help us to know whom we will and won't encounter when we open doors marked "men" or "women." Without semantic rules, communication would be impossible, because each of us would use symbols in unique
                   ole to one another. Semantic misunderstandings occur when words can be interpreted in more than one way, as the following humorous headlines prove: Police Begin Campaign to Run Down Jaywalkers Prostitutes Appeal to Pope Panda Mating Fails; Veterinarian Takes Over Astronaut Takes Blame for Gas in Spacecraft New Study of the contract 
Obesity Looks for Larger Test Group CRITICAL THINKING PROBE WHEN IS LANGUAGE OFFENSIVE? See the official Web site of the Fighting Whites basketball team at . fightingwhites.org/index.aspx. Do you agree with the rationale behind the team's name? How does it compare with athletic teams named after other ethnic groups (e.g., Indians)?
Are there times when it is acceptable to use ethnic labels in a humorous way? What pragmatic rules govern the use of these terms? 074-113 Ch03 Adler 80 2/28/05 PART ONE 9:40 AM Page 80 ELEMENTS OF COMMUNICATION SHOCKED? AMUSED? WANT TO HEAR MORE? JUST SAY, "SHUT UP!" Not too many years ago, the unrude use of "Shut
up!" might have baffled linguists and just about everybody else. But the term has now made its way from schoolgirl chatter to adult repartee and into movies and advertising. People use it as much to express disbelief, shock and joy as to demand silence. In some circles, it has become the preferred way to say "Oh my God!" "Get out of town!" and "No
way!" all at once. Editors of the New Oxford American Dictionary are considering a new entry for "Shut up!" in the next edition. "I think we should add it because it appears to be widespread," says senior editor Erin McKean. Already, she has mulled possible definitions: "used to express amazement or disbelief" and "oh, so true!" Shut up! is the latest
example of a linguistic phenomenon called amelioration, whereby a word or phrase loses its negative associations over time. A classic example is "nice," which meant "stupid" up through the 13th century. Recent flip-flops include "bad" (as in good) and "dope" (as in great). "Words that were once considered rude are now included in regular
conversation, but in a context that lets you know it's not impolite," says Connie Eble, professor of English at the University of North Carolina at Chapel Hill and the author of "Slang and Sociability." "They become so generalized that the shock value wears off." The most effective enunciation also places a full stop between "shut" and "up." Excitable
types pitch their voices higher on the word "up." Spoken in haste, the phrase loses what linguists call its "rhythmic features." Then, it can sound too much like an affront. The fact that "Shut up!" seems to resonate particularly with women doesn't surprise word whizzes. "Women tend to use more conversational movers than men," says dictionary
editor Ms. McKean, who also edits "Verbatim," a language quarterly. "These are little phrases that help keep the dialogue going." Though some people don't like the phrase ("I think it just sounds rude," says actress Drew Barrymore), plenty of professional types are hooked. Says Dawn Jackson, a 32year-old communications manager in San Francisco,
"There are just times when nothing else can express the level of shock, surprise, you name it, that you're feeling." Shelly Branch Pragmatic rules govern how people use language in everyday interaction. 8 Consider the example of a male boss saying "You look very pretty today" to a female employee. It's easy to imagine how the subordinate might be
offended by a comment that her boss considered an innocent remark. Scholars of language have pointed out several levels at which the rules each person uses can differ. You can understand these levels by imaging how they would operate in our example: Each person's self-concept Boss: Views himself as a nice guy. Subordinate: Determined to
succeed on her own merits, and not her appearance. The episode in which the comment occurs Boss: Views employees like members of the family. Employees on boss's goodwill for advancement. Cultural background Boss: Member of
generation in which comments about appearance were common. Employee: Member of generation sensitive to sexual harassment. 074-113 Ch03 Adler 2/28/05 9:40 AM Page 81 CHAPTER 3 As this example shows, pragmatic rules don't involve semantic issues, since the words themselves are usually understood well by almost everybody. Instead, they
involve how those words are understood and used. The reading on page 80 provides a good illustration of pragmatic rules: Is "shut up" an offensive attack or a statement of astonishment? It depends on the participants' understanding and
interaction, see the Critical Thinking Probe on page 79. THE POWER OF LANGUAGE On the most obvious level, language allows us to satisfy basic functions, the way we use language also influences others and reflects our attitudes in more subtle ways,
which we will examine now. Language Shapes Attitudes The power of language to shape ideas has been recognized throughout history. The first chapters of the Bible report that Adam's dominion over animals was demonstrated by his being given the power to give them names. 9 As we will now see, our speech—sometimes consciously and sometimes
not—shapes others' values, attitudes, and beliefs in a variety of ways. NAMING "What's in a name?" Juliet asked rhetorically. If Romeo had been a social scientist, he would have answered, "A great deal." Research has demonstrated that names are more than just a simple means of identification: They shape the way others think of us, the way we view
ourselves, and the way we act. Source: © The New Yorker Collection 1993 Robert Mankoff from cartoonbank.com. All Rights Reserved. LANGUAGE 81 The most powerful stimulus for changing minds is not a chemical. Or a baseball bat. It is a word. George A. Miller, past president, American Psychological Association 074-113 Ch03 Adler 82 PART
ONE 2/28/05 9:40 AM Page 82 ELEMENTS OF COMMUNICATION At the most fundamental level, some research suggests that even the phonetic sound of a person's name affects the way we regard him or her, at least when we don't have other information available. One recent study revealed that reasonably accurate predictions about who will win
an election can be made on the basis of some phonetic features of the candidates' surnames. 10 Names that lack these qualities. For example, in one series of local elections, the winning candidates had names that resonated with voters: Sanders beat Pekelis, Rielly
defeated Dellwo, Grady outpolled Schumacher, Combs trounced Bernsdorf, and Golden prevailed over Nuffer. Names don't guarantee victory, but in seventy-eight elections, forty-eight outcomes supported the value of having an appealing name. The book of Proverbs (22:1) proclaims "a good name is rather to be chosen than great riches." Social science
research confirms this position.11 In one study, psychologists asked college students to rate over a thousand names according to their likability, how active or passive they seemed, and their masculinity or femininity. The names Michael, John, and Wendy were viewed as likable and active and were rated as possessing the masculine or feminine traits
of their sex. The names Percival, Isadore, and Alfreda were less likable, and their sexual identity was less clear. Choosing a newborn's name can be especially challenging for people from nondominant cultures with different languages. One writer from India describes the problem he and his wife faced when considering names for their first child: How
will the child's foreign name sound to American ears? (That test ruled out Shiva, my family deity; a Jewish friend put her foot down.) Will it provoke bullies to beat him up on the school playground? (That was the end of Karan, the name of a warrior from the Mahabharata, the Hindu epic. A boy called "Karen" wouldn't stand a chance.) Will it be as
euphonic in New York as it is in New Delhi? (That was how Sameer failed to get off the ground. "Like a bagel with a schmear!" said one ruthless well-wisher.) 12 First names aren't the only linguistic elements that may shape attitudes about men and women. As the reading on the next page suggests, the choice of what last name to use after marriage
can influence others' perceptions. CREDIBILITY Scholarly speaking is a good example of how speech style influences perception. We refer to what has been called the Dr. Fox hypothesis. 13 "An apparently legitimate speaker who utters an unintelligible message will be judged competent by an audience in the speaker's area of apparent expertise." The
Dr. Fox hypothesis got its name from one Dr. Myron L. Fox, who delivered a talk followed by a half-hour discussion on "Mathematical Game Theory as Applied to Physical Education." The audience included psychiatrists, psychologists, social workers, and educators. Questionnaires collected after the session revealed that these educated listeners found
the lecture clear and stimulating. Despite his warm reception by this learned audience, Fox was a complete fraud. He was a professional actor whom researchers had coached to deliver a lecture of double-talk—a patchwork of information from a Scientific American article mixed with jokes, non sequiturs, contradictory statements, and meaningless
references to unrelated topics. When wrapped in a linguistic package of high-level professional jargon, however, the meaningless gobbledygook was judged as important information. In other words, Fox's audience reaction was based more on the credibility that arose from his use of impressive-sounding language than from the ideas he expressed.
074-113 Ch03 Adler 2/28/05 9:40 AM Page 83 CHAPTER 3 LANGUAGE IN THE NAME OF LOVE It used to be a non-issue. When Jane Doe married Joe Snow, she became Jane Doe or become Jane Doe Snow, or Jane Doe-
Snow—or even Joe Doe. Some couples are choosing to merge their last names, becoming Jane and Joe Snowdoe. "There's been all kinds of engineering with names," says Rae Moses, a linquistics professor at Northwestern University. Moses surveyed an Illinois grade school with 302 students and found that 32% of them—most of whose mothers were
working professionals—had non-traditional last names. As more options become acceptable, many couples are asking themselves: What's in a name? There's no shortage of answers. To some, the traditional method is a sexist vestige of the days when a woman literally became her husband's property. To others, the tradition has long since shed that
stigma and has become a romantic symbol of the bond between two people. To still others, it's a convenient way to dump an unwieldy name. At least 90% of Americans still follow tradition, says Laurie Scheuble, a sociologist at Doane College in Nebraska. But, she says, as more women establish careers and marry later in life, many are choosing to
keep their names. "I don't think it's ever going to be the norm, but I think we're going to see more of it in the future," says Scheuble. She adds, people with more education and higher incomes are more likely to be tolerant of a woman keeping her name, as are people who grew up in large cities. Political and religious leanings also seemed to affect
attitudes. When Jeff Nicholson of Champaign, Ill., married Dawn Owens, he became Nicholson-Owens; she became Nicholson. "I felt it would make me feel a lot closer to her," says Jeff, 24. "And it seemed fairest. Neither of us loses our heritage in the family tree." Dawn, 31, says her family wasn't thrilled when she broke the news. "My mom
was really looking forward to saying 'Mr. and Mrs. Jeffrey Nicholson.'" So, apparently, was the Illinois Department of Motor Vehicles. "We had to fight them tooth and nail to get a hyphen on our driver's licenses," Dawn says. "They said their software wouldn't take it." Nancy Herman of Minneapolis and her husband, Don Perlmutter, came up with yet
another variation: They merged their names, becoming the Perlmans. Several other countries do have different naming methods. In some Scandinavian and Latin American countries, married women often keep their names, becoming the Perlmans. Several sons, her husband will sometimes take her family
name. "It's kind of a gift that the groom's family gives to the bride's family," Moses says. Suzanne Schlosberg The same principle seems to hold for academic writing. 14 A group of thirty-two management professors rated material according to its complexity rather than its content. When a message about consumer behavior was loaded with
unnecessary words and long, complex sentences, the professors rated it highly. When the same message was translated into more readable English, with shorter words and clearer sentences, the professors judged the same research as less competent. STATUS In the classic musical My Fair Lady, Professor Henry Higgins transformed Eliza Doolittle
from a lowly flower girl into a high-society woman by replacing her cockney accent with an upper-crust speaking style. Decades of research have demonstrated that the power of speech to influence status is a fact.15 Several factors combine to create positive or negative impressions; accent.choice of words, speech rate, and even the apparent age of a
speaker. In most cases, speakers of standard dialect are rated higher than nonstandard speakers in a variety of ways: They are viewed as more competent and more self-confident, and the content of their messages is rated more favorably. The unwillingness or inability of a communicator to use the standard dialect fluently can have serious 83 074-
113_Ch03_Adler 84 PART ONE 2/28/05 9:40 AM Page 84 ELEMENTS OF COMMUNICATION consequences. For instance, speakers of Black English, a distinctive dialect with its own accent, grammar, syntax, and semantic rules, are rated as less intelligent, professional, capable, socially acceptable, and employable by speakers of standard English. 16
SEXISM AND RACISM By now it should be clear that the power of language to shape attitudes goes beyond individual cases and influences how we perceive entire groups of people. For example, Casey Miller and Swift contend that, except for
words referring to feSource: © Joseph Farris from cartoonbank.com. All Rights Reserved. males by definition, such as mother and actress, English defines many nonsexual concepts as male. Most dictionaries, in fact, define effeminate as the opposite of masculine, although the opposite of feminine is closer to unfeminine. Miller and Swift also argue
that incorrect use of the pronoun he to refer to both men and women can have damaging results. On the television screen, a teacher of first-graders who has just won a national award is describing her way of teaching. "You take each child where you find him," she says. "You watch to see what he's interested in, and then you build on his interests." A
five-year-old looking at the program asks her mother, "Do only boys go to that school?" "No," her mother begins, "she's talking about girls too, but—" But what? The teacher being interviewed on television is speaking correct English. What can the mother tell her daughter about why a child, in any generalization, is always he rather than she? How does
a five-year-old comprehend the generic personal pronoun?17 It's usually easy to use nonsexist language. For example, the term mankind may be replaced by human power, workers, and workforce; and
manhood may be replaced by adulthood. Likewise, The power which comes from names and naming is related directly to the power to define others—individuals, races, sexes, ethnic groups. Our identities, who and what we are labeled. The names,
labels, and phrases employed to "identify" a people may in the end determine their survival. Haig A. Bosmajian The Language of Oppression 

Congress. Foremen may be called supervisors. Policemen and policewomen are both police officers. The use of labels for
racist purposes has a long and ugly past. Names have been used throughout history to stigmatize groups that other groups have disapproved of.18 By using derogatory terms to label some people, the out-group is set apart and pictured in an unfavorable light. Diane Mader provides several examples of this: We can see the process of stigmatization in
Nazi Germany when Jewish people became vermin, in the United States when African Americans became "niggers" and chattel, in the military when the enemy became "gooks." 19 074-113 Ch03 Adler 2/28/05 9:40 AM Page 85 CHAPTER 3 LANGUAGE 85 The power of racist language to shape attitudes is difficult to avoid even when it is obviously
offensive. In one study, experimental subjects who heard a derogatory label used against a member of a minority group expressed annoyance at this sort of slur; but despite their disapproval, the negative emotional terms did have an impact. 20 Not only did the unwitting subjects rate the minority individual's competence lower when that person
```

```
performed poorly, but also they found fault with others who associated socially with the minority person—even members of the subject's own ethnic group. ETHICAL CHALLENGE SEXIST AND RACIST LANGUAGE One of the most treasured civil liberties is freedom of speech. At the same time, most people would agree that some forms of racist and
sexist speech are hateful and demeaning to their targets. As you have read in these pages, language shapes the attitudes of those who hear it. How do you reconcile the principle of free speech and the need to minimize hateful and discriminatory messages? Do you think laws and policies can and should be made that limit certain types of
communication? If so, how should those limits be drafted to protect civil liberties? If not, can you justify the necessary protection of even sexist and racist language? Language Reflects Attitudes. Feelings of control, attraction, commitment, responsibility—all these
and more are reflected in the way we use language. POWER Communication researchers have identified a number of language patterns that add to, or detract from, a speaker's ability to influence others, as well as reflecting how a speaker feels about his or her degree of control over a situation.21 Table 3-1 summarizes some of these findings by
listing several types of "powerless" language. You can see the difference between powerful language and powerless language by comparing the following statements: "Excuse me, sir, I hate to say this, but I . . . it was just impossible to finish it may be able to turn in the assignment on time. I had a personal emergency and . . . . well . . . it was just impossible to finish it may be able to turn in the assignment on time. I had a personal emergency and . . . . well . . . . it was just impossible to finish it may be able to turn in the assignment on time. I had a personal emergency and . . . . well . . . . it was just impossible to finish it may be able to turn in the assignment on time. I had a personal emergency and . . . . well . . . . it was just impossible to finish it may be able to turn in the assignment on time. I had a personal emergency and . . . . well . . . . it was just impossible to finish it may be able to turn in the assignment on time. I had a personal emergency and . . . . well . . . . it was just impossible to finish it may be able to turn in the assignment of the able to turn 
by today. I'll have it in your mailbox on Monday, okay?" "I won't be able to turn in the assignment on time. I had a personal emergency, and it was impossible to finish it by today. I'll have it in your mailbox on Monday, okay?" "I won't be able to turn in the assignment on time. I had a personal emergency, and it was impossible to finish it by today. I'll have it in your mailbox on Monday, okay?" "I won't be able to turn in the assignment on time. I had a personal emergency, and it was impossible to finish it by today. I'll have it in your mailbox on Monday, okay?" "I won't be able to turn in the assignment on time. I had a personal emergency, and it was impossible to finish it by today. I'll have it in your mailbox on Monday, okay?" "I won't be able to turn in the assignment on time. I had a personal emergency, and it was impossible to finish it by today. I'll have it in your mailbox on Monday, okay?" "I won't be able to turn in the assignment on time. I had a personal emergency, and it was impossible to finish it by today. I'll have it in your mailbox on Monday, okay?" "I won't be able to turn in the assignment on time. I had a personal emergency, and it was impossible to finish it by today. I'll have it in your mailbox on Monday."
to sound as powerful as you can. Along with gaining com- 074-113 Ch03 Adler 86 2/28/05 PART ONE TABLE 3-1 9:40 AM Page 86 ELEMENTS OF COMMUNICATION Powerless Language Type of Usage Example Hedges "I'm kinda disappointed . . ." "I think we should . . ." "I guess I'd like to . . ." Hesitations "Uh, can I have a minute of your time?"
"Well, we could try this idea . . ." "I wish you would—er—try to be on time." Intensifiers "So that's how I feel . . ." "I'm not very hungry." Polite forms "Excuse me, sir . . ." Tag questions "It's about time we got started, isn't it?" "Don't you think we should give it another try?" Disclaimers pliance, another conversational goal is often building a
supportive, friendly relationship; and sharing power with the other person can help you in this regard. For this reason, many everyday statements will contain a mixture of powerful speech and powerful mannerisms can help the student get
what she wants while staying on good terms with the professor: "Excuse me, Professor Rodman. I want you to know that I won't be able to turn in the assignment on time. I had a personal emergency, and it was impossible to finish it by today. I'll definitely have it in your mailbox on Monday." Whether or not the professor finds the excuse acceptable
it's clear that this last statement combines the best features of powerful "I probably shouldn't say this, but . . ." of self-assurance and goodwill. Simply counting the number of powerful or powerful or powerful who has the most control in a relationship.
Social rules often mask the real distribution of power. Sociolinguist Deborah Tannen describes how politeness can be a face-saving way of delivering an order: I hear myself giving instructions to my assistants without actually issuing orders: "Maybe it would be a good idea to . . .;" It would be great if you could . . . " all the while knowing that I expect
them to do what I've asked right away . . . This rarely creates problems, though, because the people who work for me know that there is only one reason I mention tasks—because I want them done. I like giving instructions in this way; it appeals to my sense of what it means to be a good person . . . taking others' feelings into account.22 CULTURAL
IDIOM face-saving: protective of one's dignity As this quote suggests, high-status speakers often realize that politeness is an effective way to get their needs met while protecting the face of the less powerful speech and polite speech is
usually most effective.23 Of course, if the other person misinterprets politeness for weakness, it may be necessary to shift to a more powerful speech that gets the desired results in mainstream North American and European culture doesn't succeed everywhere with everyone.24 In Japan, saving face for others is an important
in interpersonal relationships rather than taking a firm or oppositional stance in order to make others feel more at ease. Korean culture represents yet another group of people who prefers "indirect" (for example, "ecould be") to "direct" speech. 074-113_Ch03_Adler 2/28/05 9:40 AM Page 87 CHAPTER 3 AFFILIATION Power isn't the only
way language reflects the status of relationships. Language can also be a way of building and demonstrated that communicators who want to show affiliation with one another adapt their speech in a variety of ways, including their choice of vocabulary, rate of talking, number
and placement of pauses, and level of politeness. 25 On an individual level, close friends and lovers often develop special terms that serve as a way of signifying their relationship. The same process works among
members of larger groups, ranging from street gangs to military personnel. Communication researchers call this linguistic accommodation convergence will be mutual. But when communicators want or need the approval of others they often adapt their linguistic convergence will be mutual. But when communicators want or need the approval of others they often adapt their linguistic accommodation convergence.
speech to suit the others' style, trying to say the "right thing" or speak in a way that will help them fit in. We see this process when immigrants who want to gain the rewards of material success in a new culture strive to master the prevalent language. Likewise, employees who seek advancement tend to speak more like their superiors: supervisors adopted to suit the others' style, trying to say the "right thing" or speak in a way that will help them fit in. We see this process when immigrants who want to gain the rewards of material success in a new culture strive to master the prevalent language. Likewise, employees who seek advancement tend to speak more like their superiors: supervisors adopted the supervisors and other language.
the speech style of managers, and managers converge toward their bosses. The principle of speech accommodation works in reverse, too. Communicators who want to set themselves apart from others adopt the strategy of divergence, speaking in a way that emphasizes their difference from others. For example, members of an ethnic group, even
though fluent in the dominant language, might use their own dialect as a way of showing solidarity with one another—a sort of "us against them" strategy. Divergence also operates in other settings. A physician or attorney, for example, who wants to establish credibility with his or her client might speak formally and use professional jargon to create a
sense of distance. The implicit message here is "I'm different (and more knowledgeable) than you." ATTRACTION AND INTEREST Social customs discourage us from expressing like or dislike in many situations. Only a clod would respond to the question "What do you think of the cake I baked for you?" by saying, "It's terrible." Bashful or cautious suitors
might not admit their attraction to a potential partner. Even when people are reluctant to speak candidly, the language they use can suggest their degree of interest and attraction toward a person, object, or idea. Morton Weiner and Albert Mehrabian outline a number of linguistic clues that reveal these attitudes. 27 🔳 🔳 Demonstrative pronoun
choice. These people want our help (positive) versus Those people want our help (less positive). Negation. It's good (positive) versus It's not bad (less positive). Sequential placement isn't always significant. You may put "toilet bowl
cleaner" at the top of your shopping list simply because it's closer to the market door than is champagne. RESPONSIBILITY In addition to suggesting liking and importance, language can reveal the speaker's willingness to accept responsibility for a message.
responsible). LANGUAGE CULTURAL IDIOM a clod: a dull or stupid person 87 074-113 Ch03_Adler 88 PART ONE 2/28/05 9:40 AM Page 88 ELEMENTS OF COMMUNICATION II statements. Sometimes you make me angry (less responsible) versus Sometimes I get angry when you do that (more responsible). "I" statements are
more likely to generate positive reactions from others when compared to accusatory ones.28 "But" statements. It's a good idea, but it won't work. You're really terrific, but I think we ought to spend less time together. (But cancels everything that went before the word.) Questions versus statements. Do you think we ought to do that? (less responsible)
versus I don't think we ought to do that (more responsible). TROUBLESOME LANGUAGE Besides being a blessing that enables us to live together, language can be something of a curse. We have all known the frustration of being misunderstood, and most of us have been baffled by another person's overreaction to an innocent comment. In the
following pages we will look at several kinds of troublesome language, with the goal of helping you communicate in a way that makes matters better instead of worse. The Language of Misunderstandings The most obvious kind of language problems are semantic: We simply don't understand others completely or accurately. Most misunderstandings
arise from some common problems that are easily remedied—after you recognize them. Equivocal misunderstandings are simple, at least after they are exposed. A nurse once told her patient that he "wouldn't be needing" the materials he requested from home. He interpreted the
statement to mean he was near death when the nurse meant he would be going home soon. A colleague of ours mistakenly sent some confidential materials to the wrong person after his boss told him to "send them to Richard," without specifying which Richard. Some equivocal misunderstandings can be embarrassing, as one woman recalls:
EQUIVOCAL LANGUAGE In the fourth grade the teacher asked the class what a period was. I raised my hand and shared everything I had learned about girls' getting their period. But he was talking about the dot at the end of a sentence. Oops!29 CULTURAL IDIOM a period was. I raised my hand and shared everything I had learned about girls' getting their period. But he was talking about the dot at the end of a sentence.
consequences. Communication researchers Michael Motley and Heidi Reeder suggest that equivocation at least partially explains why men may sometimes persist in attempts to become physically intimate when women have expressed unwillingness to do so.30 Interviews and focus groups with college students revealed that women often use
ambiguous phrases to say "no" to a man's sexual advances: "I'm confused about this." "Let's be friends" and even "That tickles." (The researchers found that women were most likely to use less direct phrases when they hoped to see or date the man again. When they wanted
to cut off the relationship, they were more likely to give a direct response.) Whereas women viewed indirect statements as equivalent to saying "no," men were more likely to interpret them as less clear-cut requests to stop. As the researchers put it, "male/female misunderstandings are not so much 074-113_Ch03_Adler 2/28/05 9:40 AM Page 89
CHAPTER 3 LANGUAGE 89 a matter of males hearing resistance messages as "go," but rather their not hearing them as "stop." Under the law, "no" means precisely that, and anyone who argues otherwise can be in for serious legal problems. R E L AT I V E W O R D S Relative words gain their meaning by comparison. For example, is the school you
attend large or small? This depends on what you compare it to: Alongside a campus like UCLA, with an enrollment of over thirty thousand students, it probably looks small; but compared to a smaller institution, it might seem quite large. In the same way relative words like fast and slow, smart and stupid, short and long depend for their meaning upor
what they're compared to. (The "large" size can of olives is the smallest you can buy; the larger ones are "giant," "colossal," and "super-colossal.") Some relative words are so common that we mistakenly assume that they have a clear meaning. In one study, graduate students were asked to assign numerical values to terms such as doubtful, toss-up,
likely, probable, good chance, and unlikely.31 There was a tremendous variation in the meaning of most of these terms. For example, the responses for possible ranged from 0 to 99 percent. Using relative words without explaining them can lead to
communication problems. Have you ever responded to someone's question about the weather by saying it was warm, only to find out that what was warm to you was cold to the other person? Or have you been disappointed
to learn that classes you've heard were "easy"turned out to be hard, that journeys you were told would be "short"were long, that "unusual"ideas were really quite ordinary? The problem in each case came from failing to anchor the relative word used to a more precisely measurable word. Slang is language used by a group of people whose members
belong to a similar co-culture or other group. Some slang is related to specialized interests and activities. For instance, cyclists who talk about "bonking" are referring to running out of energy. Rapsters know that "bling bling" refers to jewelry and a "whip" is a nice-looking car. Other slang consists of regionalisms—terms that are understood by
people who live in one geographic area but that are incomprehensible to outsiders. This sort of use illustrates how slang defines insiders and outsiders, creating a sense of identity and solidarity. 32 Residents of the fiftieth U.S. state know that when a fellow Alaskan says "I'm going outside," he or she is leaving the state. In the East End of London
cockney dialect uses rhyming words as substitutes for everyday expressions: "bacon and eggs" for "legs," and "Barney Rubble" for "trouble." This sort of use also illustrates how slang can be used to identify insiders and outsiders without the clueless outsiders knowing that they were
the subject of conversation ("Lovely set of bacons, eh?" "Stay away from him. He's Barney."). SLANG AND JARGON The little second grader's family had just moved and she was going to her school for the first time. When she came home that afternoon she said to her mother, "What's sex?" Her mother had been expecting that question for some time
and she was ready for her tiny daughter. So, for the next half hour she explained about the birds and the bees. Then she showed her mother a school registration card that she had brought home from school and said, "But how am I
going to get all of that into this little square?" Winston K. Pendelton 074-113 Ch03 Adler 90 PART ONE 2/28/05 9:40 AM Page 90 ELEMENTS OF COMMUNICATION Source: © Zits Partnership. Reprinted with special permission of King Features Syndicate Slang can also be age-related. Most college students know that drinkers wearing "been described by the communication of the 
goggles"have consumed enough alcohol that they find almost everyone of the opposite—or sometimes the same—sex attractive. At some schools, a "monkey" is the "other"woman or man in a boyfriend's or girlfriend's life: "I've heard Mitch is cheating on me. When I find his monkey, I'm gonna do her up!"33 Almost everyone uses some sort of jargon
the specialized vocabulary that functions as a kind of shorthand by people with common backgrounds and experience. Skateboarders have their own language to describe maneuvers: "ollie," "grind," and "shove it." Some jargon consists of acronyms—initials of terms that are combined to form a word. Stock traders refer to the NASDAQ (pronounced
"naz-dak") securities index, and military people label failure to serve at one's post as being AWOL (absent without leave). The digital age has spawned its own vocabulary of jargon. For instance, computer users know that "viruses" are tiny files that
remote observers can use to monitor a user's computer habits. Some jargon goes beyond being descriptive and conveys attitudes. For example, cynics in the high-tech world as the "carbon community" and to books and newspapers as
"treeware." Some technical support staffers talk of "banana problems," meaning those that could be figured out by monkeys, as in "This is a two-banana problem at worst."34 Jargon can be a valuable kind of shorthand for people who understand its use. The trauma team in a hospital emergency room can save time, and possibly lives, by speaking in
shorthand, referring to "GSWs" (gunshot wounds), "chem 7" lab tests, and so on; but the same specialized vocabulary that works so well among insiders can mystify and confuse family members of the patient, who don't understand the jargon. The same specialized vocabulary that works so well among insiders can mystify and confuse family members of the patient, who don't understand the jargon. The same specialized vocabulary that works so well among insiders can mystify and confuse family members of the patient, who don't understand the jargon. with people who don't share the same vocabulary. Jeffrey Katzman of the William Morris Agency's Hollywood office experienced this sort of problem when he met with members of a Silicon Valley computer firm to discuss a joint project that
was as yet merely an idea. When the techies used it, on the other hand, they meant designing a specific game or program. Ultimately, says Katzman, he had to bring in a blackboard and literally define his terms. "It was like when the Japanese first came to Hollywood," he recalls. "They had to use interpreters, and we did too." 35 074-113_Ch03_Adler

varying degrees of specificity. Consider the material you are reading. You could call it: A book A textbook Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Communication Page 91 of Chapter 3 of Understanding Human Comm
92 ELEMENTS OF COMMUNICATION In each case your description would be more and more specific. Semanticist S. I. Hayakawa created an abstraction ladder to describe this process.36 This ladder consists of a number of descriptions of the same thing. Lower items focus specifically on the person, object, or event, whereas higher terms are
generalizations that include the subject as a member of a larger class. To talk about "college," for example, is more abstract than referring to "women" is more abstract than to talk about a particular school. Likewise, referring to "women" is more abstract than referring to "them. Higher-level than to talk about a particular school. Likewise, referring to "women" is more abstract than referring to "them. Higher-level than to talk about a particular school. Likewise, referring to "women" is more abstract than to talk about a particular school.
abstractions are a useful tool, because without them language would be too cumbersome to be useful. It's faster, easier, and more useful to talk about Europe than to list all of the countries on that continent. In the same way, using relatively abstract terms like friendly or smart can make it easier to describe people than listing their specific actions.
Abstract language—speech that refers to observable events or objects—serves a second, less obvious function. At times it allows us to avoid confrontations by deliberately being unclear.37 Suppose, for example, your boss is enthusiastic about a new approach to doing business that you think is a terrible idea. Telling the truth might seem too risky, but
lying—saying "I think it's a great idea"—wouldn't feel right either. In situations like this an abstract answer can hint at your true belief without a direct confrontation: "I don't know . . . It's sure unusual . . . . It might work." The same sort of abstract language can help you avoid embarrassing friends who ask for your opinion with questions like "What do
you think of my new haircut?"An abstract response like "It's really different!"may be easier for you to deliver—and for your friend to receive—than the clear, brutal truth: "It's really ugly!"We will have more to say about this linguistic strategy of equivocation later in this chapter. Although vagueness does have its uses, highly abstract language can
cause several types of problems. The first is stereotyping. Consider claims like "All whites are bigots," "The police are a bunch of goons," or "Professors around here care more about relationships," "The police are a bunch of goons," or "Professors around here care more about their research than they do about students." Each of these claims like "All whites are bigots," "The police are a bunch of goons," or "Professors around here care more about relationships," "The police are a bunch of goons," or "Professors around here care more about their research than they do about students."
almost always too general, that they say more than we really mean. Besides creating stereotypical attitudes, abstract language can lead to the problem of confusing others. Imagine the lack of understanding that results from imprecise language can lead to the problem of confusing others. Imagine the lack of understanding that results from imprecise language can lead to the problem of confusing others.
monotonous routines and habits A: We never do anything that's fun anymore. B: What do you mean? A: We used to do lots of unusual things, but now it's the same old stuff, over and over. B: But last week we went on that camping trip, and tomorrow we're going to that party where we'll meet all sorts of new people. Those are new things. A: That's not
what I mean. I'm talking about really unusual stuff. B: (becoming confused and a little impatient) Like what? Taking hard drugs or going over Niagara Falls in a barrel? A: Don't know what you want. The best way to avoid this sort of overly abstract
language is to use behavioral descriptions instead. (See Table 3-2.) Behavioral descriptions move down the ab- 074-113_Ch03_Adler 2/28/05 9:40 AM Page 93 CHAPTER 3 straction ladder to identify the specific, observable phenomenon being discussed. A thorough description should answer three questions: 1. Who Is Involved? Are you speaking for
just yourself or for others as well? Are you talking about a group of people ("the neighbors," "women") or specific individuals ("the people next door with the barking dog," "Lola and Lizzie")? 2. In What Circumstances Does the Behavior Occur? Where does it occur: everywhere or in specific places (at parties, at work, in public)? When does it
occur: When you're tired or when a certain subject comes up? The behavior you are describing probably doesn't occur all the time. In order to be understood, you need to pin down what circumstances set this situation apart from other ones. 3. What Behaviors Are Involved? Though terms such as more cooperative and helpful might sound like concrete
descriptions of behavior, they are usually too vague to do a clear job of explaining what's on your mind. Behaviors must TABLE 3-2 LANGUAGE You can dismiss an abstraction . . . You can mistreat an object . . . But as soon as you come upon a human being, you will be moved to share yourself with him, to care for him. It will be far more difficult to
hurt his feelings or ignore him or simply analyze him. It will be almost impossible to kill him or cheer his death, which is why this sort of orientation can put armies out of business. Alfie Kohn Abstract and Behavioral Description Remarks Who Is Involved In What Circumstances Specific Behaviors 93
Problem I talk too much People I find intimidating When I want them to like me I talk (mostly about myself) instead of giving them a chance to speak or asking about their lives. Behavioral description more clearly identifies behaviors to change.
fault with her ideas, suggest alternatives that might work. Behavioral description doesn't. Appreciation "You've really been helpful lately." (Deliver to fellow worker) "When I've had to take time off work because of personal problems" "You took my shifts without complaining." Give both abstract and
behavioral descriptions for best results. Request "Clean up your act!" (Deliver to target person) "When we're around my family" "Please don't tell jokes that involve sex." Behavioral description specifies desired behavior. 074-113 Ch03 Adler 94 PART ONE 2/28/05 9:40 AM Page 94 ELEMENTS OF COMMUNICATION be observable, ideally both to
understand than are more vague abstractions. CULTURAL IDIOM a fair shake: honest treatment to weasel out of: to get out of doing something Behavioral descriptions can improve communication in a wide range of situations, as Table 3-2 illustrates. Research also supports the value of specific language. One study found that well-adjusted couples had
just as many conflicts as poorly adjusted couples, but the way the well-adjusted couples handled their problems was significantly different. Instead of blaming one another, the well-adjusted couples expressed their complaints in behavioral terms. 38 Disruptive Language Not all linguistic problems come from misunderstandings. Sometimes people
understand one another perfectly and still end up in conflict. Of course, not all disagreements can, or should be, avoided. But eliminating three bad linguistic habits from your communication repertoire can minimize the kind of clashes that don't need to happen, allowing you to save your energy for the unavoidable and important struggles. Factual
statements are claims that can be verified as true or false. By contrast, opinion statements and opinion statements are based on the speaker's beliefs. Unlike matters of fact, they can never be proved or disproved. Consider a few examples of the difference between factual statements and opinion statements are based on the speaker's beliefs. Unlike matters of fact, they can never be proved or disproved. Consider a few examples of the difference between factual statements are based on the speaker's beliefs.
in Seattle than in Portland. The climate in Portland is better than in Seattle. Kareem Abdul Jabar is the all-time leading scorer in the National Basketball Assocation. Kareem is the greatest basketball player in the National Basketball Assocation. The United States is not the best mode
of economic success in the world. When factual statements and opinion statements are set side by side like this, the difference between them is clear. In everyday conversation, we often present our opinions as if they were facts, and in doing so we invite an unnecessary argument. For example:
                   is a waste of money!" "You can't get a fair shake in this country unless you're a white male." Notice how much less antagonistic each statement would be if it was prefaced by a qualifier like "In my opinion . . ." or "It seems to me . . ." 074-113 Ch03 Adler 2/28/05 9:40 AM Page 95 CHAPTER 3 LANGUAGE 95 CONFUSING FACTS AND
INFERENCES Labeling your opinions can go a long way toward relational harmony, but developing this habit won't solve all linguistic problems. Difficulties also arise when we confuse factual statements with inferential statements—conclusions arrived at from an interpretation of evidence. Consider a few examples: FACT INFERENCE He hit a
lamppost while driving down the street. He was daydreaming when he hit the lamppost. You interrupted me before I finished what I was saying. You don't care about what I have to say. You haven't gotten a raise in almost a year
The boss is exploiting me. There's nothing wrong with making inferences as long as you identify them as such: "She stomped out and slammed the door. It looked to me as if she were furious." The danger comes when we confuse inference confusion is to use the
perception-checking skill described in Chapter 2 to test the accuracy of your inferences. Recall that a perception of the behavior, and a request for verification. For instance, instead of saying, "Why are you laughing at me?" you could say, "When you laugh like that
[description of behavior], I get the idea you think something I did was stupid [interpretation]. Are you laughing at me [question]?" Emotive language contains words that sound as if they're describing something I did was stupid [interpretation].
 "an antique,"but if you think it's ugly,you would likely describe it as "a piece of junk."Emotive words may sound like statements of fact but are always opinions. Barbra Streisand pointed out how some people use emotive language to stigmatize behavior in women that they admire in men: A man is commanding—a woman is demanding. A man is
forceful—a woman is pushy. A man is uncompromising—a woman is a ball-breaker. A man is a perfectionist—a woman's a pain in the ass. He's assertive—she's controlling. He's committed—she's obsessed. He's persevering—she's relentless. Source: Candorville. Washington
Post Writer's Group. EMOTIVE LANGUAGE 074-113_Ch03_Adler 96 PART ONE 2/28/05 9:40 AM Page 96 ELEMENTS OF COMMUNICATION He sticks to his guns—she's stubborn. If a man wants to get it right, he's looked up to and respected. If a woman wants to get it right, she's difficult and impossible.39 The reading on page 97 illustrates how
emotive language can escalate conflicts and make constructive dialogue difficult, or even impossible. As this reading suggests, problems occur when people use emotive words without labeling them as such. You might, for instance, have a long and bitter argument with a friend about whether a third person was "assertive" or "obnoxious," when a more
accurate and peaceable way to handle the issue would be to acknowledge that one of you approves of the behavior and the other doesn't. CRITICAL THINKING PROBE EMOTIVE LANGUAGE Test your ability to identify emotive language by playing the following word game. 1. Take an action, object, or characteristic and show how it can be viewed
either favorably or unfavorably, according to the label it is given. For example: a. I'm casual. You're careless. He's a slob. b. I read adult love stories. You read erotic literature. She reads pornography. 2. Now create three-part descriptions of your own, using the following statements as a start: a. I'm tactful. b. She's a liar. c. I'm conservative. d. You
have a high opinion of yourself. e. I'm quiet. f. You're pessimistic. 3. Now recall two situations in which you used emotive language? Evasive Language None of the troublesome language habits we have described so far is a deliberate
strategy to mislead or antagonize others. Now, however, we'll consider euphemisms and equivocations, two types of language that speakers use by design to avoid communicating clearly. Although both of these have some very legitimate uses, they also can lead to frustration and confusion. EUPHEMISMS A euphemism (from the Greek word meaning
"to use words of good omen") is a pleasant term substituted for a more direct but potentially less pleasant one. We are using euphemisms when we say "restroom" instead of "fat" or "overweight." There certainly are cases where the euphemistic pulling of linguistic punches can be face-saving. It's probably more constructive
on the current abuse of terms like storm trooper, swastika, Holocaust, Gestapo, and Hitler? How about putting the language of the Third Reich into mothballs? The further we are removed from the defeat of the Nazis, the more this vocabulary seems to be taking over our own. It's become part of the casual, ubiquitous, inflammatory speech Americans
use to turn each other into monsters. Which, if I recall correctly, was a tactic favored by Goebbels himself. The NRA attacked federal agents as "jackbooted government thugs who wear Nazi bucket helmets and black storm trooper uniforms." In the ratcheting up of the rhetorical wars, it wasn't enough for the NRA to complain that the agents had
overstepped their bounds; they had to call them Nazis. Republican congressmen have compared environmental Gestapo." Missouri's Bill Emerson warned about the establishment of an "eco-Gestapo force." On the Democratic side, Sen. John
Kerry recently suggested that a proposed new kind of tax audit, on "lifestyles," would produce an "IRS Gestapo-like entity." And John Lewis and Charles Rangel compared silence in the face of the new conservatives; they Nazified them. Then there are
the perennial entries on the Hitler log. Antiabortion groups talk about the abortion holocaust—comparing the fetuses to Jews and the doctors to Mengele. As for pinning the Nazi label on supporters of abortion rights, the propagandists surely know that Hitler was a hard-line opponent of abortion. (Did that make him pro life?) Even when Nazi-speak
isn't historically dumb, it's rhetorically dumb, it's rhetorically dumb. The Hitlerian language has become a "little Hitler." Every domineering high school principal is accused of running a "concentration camp." Every overbearing piece of behavior becomes a "Gestapo" tactic.
And every political disagreement becomes a fight against evil. Crying Hitler in our time is like crying wolf. The charge immediately escalates the argument, adding verbal fuel to fires of any dimension, however minor. But eventually, yelling Nazi at environmentalists and Gestapo at federal agents diminishes the emotional power of these words should
we need them. In time, these epithets even downgrade the horror of the Third Reich and the immensity of World War II. They cheapen history and insult memory, especially the memory of the survivors. Fifty years ago, Americans learned, with a fresh sense of horror, about the trains that ran on time
to the gas chambers. This was Nazism. This was Nazism. This was the Gestapo. This was the Holocaust. T
as "senior citizens" than "old." Like many businesses, the airline industry uses euphemisms to avoid upsetting already nervous flyers. 40 For example, rather than saying "turbulence," pilots and flight attendants use the less frightening term "bumpy air." Likewise, they refer to thunderstorms as "rain showers," and fog as "mist" or "haze." And savvy
flight personnel never use the words "your final destination." Despite their occasional advantages, many euphemisms are not worth the effort it takes to create them. Some are pretentious and confusing, such as the renaming of one university's Home Economics Department as the Department of Human Ecology or a middle school's labeling of
hallways as "behavior transition corridors." Other euphemisms are downright deceptive, such as the U.S. Senate's labeling of a $23,200 pay raise a "pay equalization concept." 97 074-113_Ch03_Adler 98 PART ONE 2/28/05 9:40 AM Page 98 ELEMENTS OF COMMUNICATION It's 8:15 P.M., and you are already a halfhour late for
your dinner reservation at the fanciest restaurant in town. Your partner has finally finished dressing and confronts you with the question "How do I look?" To tell the truth, you hate your partner's outfit. You don't want to lie, but on the other hand you don't want to be hurtful. Just as importantly, you don't want to lose your table by waiting around for
your date to choose something else to wear. You think for a moment and then reply, "You look amazing. I've never seen an outfit like that before. Where did you get it?" Your response in this situation was an equivocation—a deliberately vague statement that can be interpreted in more than one way. Earlier in this chapter we "Be honest with me Roger."
By 'mid-course correction' talked about how unintentional equivocation can lead to you mean divorce, don't you." misunderstandings. But our discussion here focuses on inSource: © 2000 Lee Cullum from cartoonbank.com. All Rights Reserved. tentionally ambiguous speech that is used to avoid lying on one hand and telling a painful truth on the
other. Equivocations have several advantages. They spare the receiver from the embarrassment that might come from a completely truthful answer, and it can be easier for the sender to equivocate as a way to weasel out of delivering
important but unpleasant messages. Suppose, for example, that you are unsure about your standing in one of your courses. You approach the professor answers. This answer isn't too satisfying. "What grade am I earning?" you inquire. "Oh, lots of people would be happy with it" is the answer you
receive. "But will I receive an A or B this semester?" you persist. "You could," is the reply. It's easy to see how this sort of evasiveness can be frustrating. As with euphemisms, high-level abstractions, and many other types of communication, it's impossible to say that equivocation is always helpful or harmful. As you learned in Chapter 1, competent
communication behavior is situational. Your success in relating to others will depend on your ability to analyze yourself, the other person, and the situation when deciding whether to be equivocal or direct. ETHICAL CHALLENGE EUPHEMISMS AND EQUIVOCATIONS For most people, "telling it like it is" is usually considered a virtue and "beating to other person," and the situation when deciding whether to be equivocal or direct.
around the bush" is a minor sin. You can test the function of indirect speech by following these directions: 1. Identify five examples of euphemisms and equivocations in everyday interaction. 2. Imagine how matters would have been different if the speakers or writers had used direct language in each situation. 3. Based on your observations, discuss
whether equivocation and euphemisms have any place in face-to-face communication. GENDER AND LANGUAGE So far we have discussed language use as if it were identical for both sexes. Some theorists and researchers, though, have argued that there are significant dif- 074-113_Ch03_Adler 2/28/05 9:40 AM Page 99 CHAPTER 3 ferences between
the way men and women speak, whereas others have argued that any differences are not significant.41 What are the similarities and differences between male and female language use? Content Although there is a great deal of variation within each gender, on the average, men and women discuss a surprisingly different range of topics. The first
research on conversational topics was conducted over sixty years ago. Despite the changes in male and female roles since then, the results of more recent studies are remarkably similar. 42 In these studies, women and men ranging in age from seventeen to eighty described the range of topics each discussed with friends of the same sex. Certain topics
were common to both sexes: work, movies, and television proved to be frequent for both groups. Both men and women were more striking than the similarities, however. Female friends spent much more time discussing personal and women were more striking than the similarities, however. Female friends spent much more time discussing personal and women were more striking than the similarities, however. Female friends spent much more time discussing personal and women were more striking than the similarities, however. Female friends spent much more time discussions of sex and sex a
domestic subjects, relationship problems, family, health and reproductive matters, weight, food and clothing, men, and other men. Both men and women were equally likely to discuss personal appearance, sex, and dating in same-sex
conversations. True to one common stereotype, women were more likely to gossip about close friends and family. By contrast, men spent more time gossiping about sports figures and media personalities. Women's gossip was no more derogatory than men's. These differences can lead to frustration when men and women try to converse with one
another. Researchers report that trivial is the word often used by both sexes to describe topics discussed by the opposite sex. "I want to talk about important things," a woman might say, "like how we're getting along. All he wants to do is talk about the news or what twe'll do this weekend." Reasons for Communicating Research shows that the notion
that men and women communicate in dramatically different ways is exaggerated. Both men and women, at least in the dominant cultures of the communicators, the goals of almost all ordinary conversations include making the conversation
fun. Their discussions involve a greater amount of joking and good-natured teasing. By contrast, women's conversations focus more frequently on feelings, relationships, LANGUAGE 99 074-113 Ch03 Adler 100 2/28/05 PART ONE 9:40 AM Page 100 ELEMENTS OF COMMUNICATION CULTURAL IDIOM one-up: respond in order to maintain one's
superiority to grease the wheels: to facilitate and personal problems. In fact, communication researcher Julia Wood flatly states that "for women, talk is the essence of relationships." 44 When a group of women was surveyed to find out what kinds of satisfaction they gained from talking with their friends, the most common theme mentioned was a
feeling of empathy—"To know you're not alone," as some put it. 45 Whereas men commonly described same-sex conversations as something they liked, women characterized their importance. Nearly 50 percent of the women surveyed
said they called friends at least once a week just to talk, whereas less than half as many men did so. In fact, 40 percent of the men surveyed reported that they never called another man just to talk. Because women use conversation to pursue social needs, female speech typically contains statements showing support for the other person, demonstrations at least once a week just to talk. Because women use conversation to pursue social needs, female speech typically contains statements showing support for the other person, demonstrations at least once a week just to talk.
of equality, and efforts to keep the conversation going. With these goals, it's not surprising that traditionally female speech often contains statements of sympathy and empathy: "I've felt just like that myself," "The same thing happened to me!" Women are also inclined to ask lots of questions that invite the other person to share information: "How did
you feel about that?" "What did you do next?" The importance of nurturing a relationship also explains why female speech is often driven by quite different goals than
women's. Men are more likely to use language to accomplish the job at hand than to nourish relationships. This explains why men are less likely than women to disclose their vulnerabilities, which would be a sign of weakness. When someone else is sharing a problem, instead of empathizing, men are prone to offer advice: "That's nothing to worry about
.." or "Here's what you need to do ..." Besides taking care of business, men are more likely than women to use conversations to exert control, preserve their independence, and enhance their status. This explains why men are more prone to dominate conversations and one-up their partners. Men interrupt their conversational partners to assert their
own experiences or point of view. (Women interrupt too, but they usually do so to offer support: quite a different goal.) Just because male talk is competitive doesn't mean it's not enjoyable. Men often regard talk as a kind of game: When researchers asked men what they liked best about their all-male talk, the most frequent answer was its ease.46
Another common theme was appreciation of the practical value of conversation: new ways to solve problems. Men also mentioned enjoying the humor and rapid pace that characterized their all-male conversations. Differences like these begin early in childhood. Sociolinguist Deborah Tannen summarizes a variety of studies showing that boys use talk
to assert control over one another, whereas girls use talk to maintain harmony.47 Transcripts of conversations between preschoolers aged two to five showed that girls are far more cooperative than boys.48 They preceded their proposals for action by saying, "let's," as in "Let's go find some" or "Let's turn back." By contrast, boys gave orders like "Lie
down" or "Gimme your arm." Conversational Style Women behave differently in conversations than do men. 49 For example, women ask more questions in mixed-sex conversations than do men. 49 For example, women ask more questions in mixed-sex conversations than do men. 49 For example, women ask more questions in mixed-sex conversations than do men. 49 For example, women ask more questions in mixed-sex conversations than do men. 49 For example, women ask more questions in mixed-sex conversations than do men. 49 For example, women ask more questions in mixed-sex conversations than do men. 49 For example, women ask more questions in mixed-sex conversations than do men. 49 For example, women ask more questions in mixed-sex conversations than do men. 49 For example, women ask more questions in mixed-sex conversations than do men. 49 For example, women ask more questions in mixed-sex conversations than do men. 49 For example, women ask more questions in mixed-sex conversations than do men. 49 For example, women ask more questions in mixed-sex conversations than do men. 49 For example, women ask more questions as a final do men. 49 For example, women ask more questions as a final do men. 49 For example, women ask more questions as a final do men. 49 For example, women ask more questions as a final do men. 49 For example, women ask more questions as a final do men. 49 For example, women ask more questions as a final do men. 49 For example, women ask more questions as a final do men. 49 For example, women ask more questions as a final do men. 49 For example, women ask more questions as a final do men. 49 For example, women ask more questions as a final do men. 49 For example, women ask more questions as a final do men. 49 For example, women ask more questions as a final do men. 49 For example, women ask more questions as a final do men. 49 For example, women ask more questions as a final do men. 49 For example, women ask more questions as a final do men. 49 For example, women ask more questions as a final do men. 49 For exam
revealed that in mixed-sex conversations, men interrupt women far more than the other way around. Some theorists have argued that differences like these result in women's speech that is less powerful and more emotional than men's. Research has supported these theories—at least in some cases. Even when clues about the speakers' sex were
have revealed that men and women behave differently in certain conversational settings. For example, in mixed-sex dyads men talk more, whereas in same-sex conversations there are other differences
between men and women: Women use more questions, justifiers, intensive adverbs, personal pronouns, and filler words to begin sentences. 50 Given these differences, it's easy to wonder how men and women manage to communicate with one another at all. One reason why cross-sex
complementary difference between men and women also promotes cross-sex conversations: Men are more likely to talk about themselves with women than with other men; and because women are willing to adapt to this topic, conversations are likely to run smoothly, if one-sidedly. An accommodating style isn't always a disadvantage for women. One
study revealed that women who spoke tentatively were actually more influential with men than those who used more powerful speech.51 On the other hand, this tentative style was less effective in persuading women. (Language use had no effect on men's persuading women who are willing and able to be flexible in
found that the ways women and men communicate are much more similar than different. Page 102 ELEMENTS OF COMMUNICATION If women speak and hear a language of connection and intimacy, while men speak and hear a language of status and independence, then communication, prey to a clash of conversational styles. Instead of different dialects, it has been
said they speak different genderlects. Deborah Tannen You Just Don't Understand: Women and Men in Conversation in communication behavior resulted from sex difference. 52 There is no significant difference between male speech and female speech in areas such as use of profanity, use of qualifiers such as "I quess" or "This is just my opinion," tac
questions, and vocal fluency.53 Some on-the-job research shows that male and female supervisors in similar positions behave the same way and are equally effective. In light of the considerable similarities between the sexes and the relatively minor differences, some communication scholars suggest that the "men are from Mars, women are from Mar
 Venus" claim should be replaced by the metaphor that "men are from North Dakota, women are from South Dakota."54 A growing body of research explains some of the apparent contradictions between the similarities and differences between male speech and female speech. They have revealed other factors that influence language use as much or
more than does gender. For example, social philosophy plays a role in conversational style. The cooperative or competitive orientations of speakers have more influence on how they interact
than does their gender. The speaker's occupation and social role also influence speaking style. For example, male day-care teachers more closely than it resembles the language of fathers at home. Overall, doctors interrupt their patients more often than the reverse, although male
patients do interrupt female physicians more often than their male counterparts. At work, task differences exert more powerful effects on whether speaker's experience on the witness stand and
occupation had more to do with language use than did gender. If women generally use "powerless" language, this may possibly reflect their social role in society at large. As the balance of power grows more equal between men and women, we can expect many linguistic differences to shrink. Why is the research on gender differences so confusing? In
some studies, male speech and female speech seem identical, whereas other studies reveal important differences. As we have already said, one reason for the confusion is that factors besides gender influence the way people speak: the setting in which conversation takes place, the expertise of the speakers, their social roles (husband/wife
            oyee, and so on). Also, female roles are changing so rapidly that many women simply don't use the conversational styles that influences the way individual men and women speak is their sex role—the social orientation that governs
behavior—rather than their biological gender. Researchers have identified three sex roles: masculine, feminine, and androgynous. These sex roles don't always line up neatly with gender. Researchers have identified three sex roles don't always line up neatly with gender. There are "masculine, feminine, and androgynous. These sex roles don't always line up neatly with gender. There are "masculine, feminine, and androgynous communicators who combine traditionally masculine and feminine characteristics. Research
shows that linguistic differences are often a function of these sex roles more dominant language than either feminine or androgynous speakers. Feminine speakers have the most submissive speaking style, whereas androgynous speakers fall
between these extremes. When two masculine communicators are in a conversation, they often engage 074-113_Ch03_Adler 2/28/05 9:40 AM Page 103 CHAPTER 3 in a one-up battle for dominance, responding to the other's bid for control with a counterattempt to dominate the relationship. Feminine sex-role speakers are less predictable. They use
dominance, submission, and equivalent behavior in an almost random fashion. Androgynous individuals are more predictable: They most frequently meet another's bid for dominance with a symmetrical attempt at control, but then move quickly toward an equivalent relationship. All this information suggests that, when it comes to
communicating, "masculinity" and "femininity" are culturally recognized sex roles, not biological traits. Research suggests that neither a stereotypically male style is the best choice. For example, one study showed that a "mixed gender strategy" that balanced the stereotypically male task-oriented approach with the stereotypically
female relationship-oriented approach received the highest marks by both male and female respondents. 56 As opportunities for men and women become smaller. CULTURE AND LANGUAGE Anyone who has tried to translate ideas from one
language to another knows that communication across cultures can be a challenge.57 Sometimes the results of a bungled translation can be amusing. For example, the American manufacturers of Pet condensed milk unknowingly introduced their product in French means "to break
wind."58 Likewise, the naive English-speaking representative of a U.S. soft drink manufacturer drew laughs from Mexican customers when she offered free samples of Fresca soda pop. In Mexican slang, the word fresca means "lesbian." Even choosing the right words during translation won't guarantee that nonnative speakers will use an unfamiliar
language correctly. For example, Japanese insurance companies warn their policyholders who are visiting the United States to avoid their cultural tendency to say "excuse me"or "I'm sorry"if they are involved in a traffic accident.59 In Japan, apologizing is a traditional way to express goodwill and maintain social harmony, even if the person offering
the apology is not at fault. But in the United States, an apology can be taken as an admission of guilt and may result in Japanese tourists' being held accountable for accidents for which they may not be responsible. Differences in
the way language is used and the very worldview that a language creates make communicating across cultures a challenging task. Verbal Communication Styles Using language is more than just choosing a particular group of words to convey an idea. Each language has its own unique style that distinguishes it from others. And when a communication
tries to use the verbal style from one culture in a different one, problems are likely to arise.60 LANGUAGE 103 CULTURAL IDIOM bungled: done something imperfectly "to break wind": to expel bowel gas 074-113 Ch03 Adler 104 2/28/05 PART ONE 9:40 AM Page 104 ELEMENTS OF COMMUNICATION CULTURAL IDIOM "beating around the
bush": approaching something in an indirect way DIRECT-INDIRECT One way in which verbal styles vary is in their directness. Anthropologist Edward Hall identified two distinct cultural ways of using language primarily to express thoughts, feelings, and ideas as clearly and logically as possible. To low-context
communicators, the meaning of a statement is in the words spoken. By contrast, highcontext cultures value language as a way to maintain social harmony. Rather than upset others by speaking clearly, communicators in these cultures learn to discover meaning from the context in which a message is delivered: the nonverbal behaviors of the speaker,
the history of the relationship, and the general social rules that govern interaction between people. Table 3-3 summarizes some key differences between the way low- and high-context cultures use language. North American culture falls toward the direct, low-context end of the scale. Residents of the United States and Canada value straight talk and
grow impatient with "beating around the bush." By contrast, most Asian and Middle Eastern cultures fit the high-context pattern. In many Asian cultures, for example, maintaining harmony is important, and so communicators will avoid speaking clearly if that would threaten another person's face. For this reason, Japanese or Koreans are less likely
than Americans to offer a clear "no" to an undesirable request. Instead, they would probably use roundabout expressions like "I agree with you . . ." Low-context Mericans may miss the subtleties of high-context messages, but people raised to recognize indirect communication have little trouble
decoding them. A look at Japanese child-rearing practices helps explain why. Research shows that Japanese mothers rarely deny the requests of their young children by saying "no." Instead, they use other strategies: ignoring a child's requests of their young children by saying "no." Instead, they use other strategies: ignoring a child's requests, raising distractions, promising to take care of the matter later, or explaining why they can or will not say
"yes."62 Sociolinquist Deborah Tannen explains how this indirect approach illustrates profound differences between high- and low-context communications: Source: © The New Yorker 2001 Donald Reilly from cartoonbank.com. All Rights Reserved. . . . saying no is something associated with children who have not yet learned the norm. If a Japanese
mother spoke that way, she would feel she was lowering herself to her child's level precisely because that way of speaking is associated with Japanese children.63 "You seem familiar, yet somehow strange— are you by any chance Canadian?" Tannen goes on to contrast the Japanese notion of appropriateness with the very different one held by
dominant North American society: Because American norms for talk are different, it is common, and therefore expected, for American parents to "just say no." That's why an American mother feels authoritative when she talks that way: because it fits her image of how an authoritative adult talks to a child.64 The clash between cultural norms of
directness and indirectness can aggravate problems in cross-cultural situations such as encounters between straight-talking low-context lsraelis, who value speaking clearly, and Arabs, whose high-context culture stresses smooth interaction. It's easy to imagine how the clash of cultural styles could lead to misunderstandings and conflicts between
Israelis and their Palestinian neighbors. Israelis could view their Arab counterparts as evasive, whereas the Palestinians could perceive the Israelis as insensitive and blunt. 074-113 Ch03 Adler 2/28/05 9:40 AM Page 105 CHAPTER 3 TABLE 3-3 LANGUAGE 105 Low- and High-Context Communication Styles Low Context High Context Majority of
information carried in explicit verbal messages, with less focus on the situational context. Important information carried in contextual clues (time, place, relationship, situation). Less reliance on explicit verbal messages. Self-expression valued.
and maintained by indirect expression of opinions. Comunicators refrain from saying "no" directly. Clear, eloquent speech considered praiseworthy. Verbal fluency admired. Even within a single country, subcultures can have
different notions about the value of direct speech. For example, Puerto Rican language style resembles high-context Japanese or Korean more than low-context English.65 As a group, Puerto Ricans value social harmony and avoid confrontation, which leads them to systematically speak in an indirect way to avoid giving offense. Asian Americans are
more offended by indirectly racist statements than are African Americans, Hispanics, and Anglo Americans. 66 Researchers Laura Leets and Howard Giles suggest that the traditional Asian tendency to favor high-context messages explains the difference: Adept at recognizing hints and nonverbal cues, high-context communicators are more sensitive to
messages that are overlooked by people from cultural groups that rely more heavily on unambiguous, explicit low-context messages. It's worth noting that even generally straight-talking residents of the United States raised in the low-context messages. It's worth noting that even generally straight-talking residents of the United States raised in the low-context messages.
saying "I can't make it," it's likely that both you and the other person know that the choice of attending isn't really beyond your control. If your goal was to be perfectly clear, you might say, "I don't want to get together." ELABORATE-SUCCINCT Another way in which language styles can vary across cultures is in terms of whether they are elaborate or
succinct. Speakers of Arabic, for instance, commonly use language that is much more rich and expressive than most communicators who use English are a common feature of Arabic. This contrast in linguistic style can lead to misunderstandings between people from different
backgrounds. As one observer put it, ... [A]n Arab feels compelled to overassert in almost all types of communication because others expect him [or she] means without the expected assertion, other Arabs may still think that he [or she] means the opposite. For example, a simple "no" to a host's requests to
eat more or drink more will not suffice. To convey the meaning that he [or she] is actually full, the guest must keep repeating "no" several times, coupling it with an oath such as "By God" or "I swear to God." 67 074-113 Ch03 Adler 106 2/28/05 PART ONE CULTURAL IDIOM tongue: language 9:40 AM Page 106 ELEMENTS OF COMMUNICATION
Succinctness is most extreme in cultures where silence is valued. In many American Indian cultures, for example, the favored way to handle ambiguous social situations is to remain quiet.68 When you contrast this silent style to the talkativeness common in mainstream American cultures when people first meet, it's easy to imagine how the first
encounter between an Apache or Navajo and a white person might feel uncomfortable to both people. FORMAL-INFORMAL Along with differences such as directness-indirectness and elaborate-succinct styles, a third way languages differ from one culture to another involves formality and informality. The informal approach that characterizes
relationships in countries like the United States, Canada, and Australia is quite different from the great concern for using proper speech in many parts of Asia and Africa. Formality isn't so much a matter of using proper speech in many parts of Asia and Africa. Formality isn't so much a matter of using proper speech in many parts of Asia and Africa.
hierarchies.69 It has special vocabularies for different levels of social status, for different degrees of intimacy, and for different types of social status, for different types of social status, for different degrees of intimacy, and for different types of social status, for different degrees of intimacy, and for different types of social status, for different types of 
learned person in Korea is the ability to use language that recognizes these relational distinctions. When you contrast these sorts of distinctions with the casual friendliness many North Americans use even when talking with complete strangers, it's easy to see how a Korean might view communicators in the United States as boorish and how an
American might view Koreans as stiff and unfriendly. Language and Worldview Different linguistic styles are important, but there may be even more fundamental differences that separate speakers of various languages. For almost 150 years, some theorists have put forth the notion of linguistic determinism: the notion that the worldview of a culture
is shaped and reflected by the language its members speak. The best-known example of linguistic determinism is the notion that Eskimos have a large number of words (estimated from seventeen to one hundred) for what we simply call "snow." Different terms are used to describe conditions like a driving blizzard, crusty ice, and light powder. This
example suggests how linguistic determinism operates. The need to survive in an Arctic environments, and after the language makes these distinctions, speakers are more likely to see the world in ways that match the broader vocabulary. Even though
there is some doubt that Eskimos really do have one hundred words for snow, 70 other examples do seem to support the principle of linguistic determinism. 71 For instance, bilingual speakers seem to think differently when they change languages. In one study, French Americans "The Eskimos have eighty-seven words for snow were asked to interpret
a series of pictures. When they spoke and not one for malpractice." in French, their descriptions were far more romantic and Source: © 1999 Leo Cullum from cartoonbank.com. All Rights Reserved. 074-113 Ch03 Adler 2/28/05 9:40 AM Page 107 CHAPTER 3 LANGUAGE 107 UNDERSTANDING DIVERSITY LANGUAGE AND PERCEPTION English
speakers can often draw shades of distinction unavailable to non-English speakers. The French, for instance, cannot differentiate a chairman from a president, and the Italians have no equivalent of
wishful thinking. In Russia there are no native words for efficiency, challenge, engagement ring, have fun, or take care. On the other hand, other languages have facilities that we lack. Both French and Kennen) and knowledge that results from
understanding (savior and wissen). Portuguese has words that differentiate between an interior angle and an exterior one. All the Romance languages can distinguish between something that leaks into and something that leaks out of. The Italians even have a word for the mark left on a table by a moist glass (culacino) while the Gaelic speakers of
Scotland, not to be outdone, have a word for the itchiness that overcomes the upper lip just before taking a sip of whiskey. It's sgirob. And we have nothing in English to match the Danish macho, so we must borrow the term from them or do
without the sentiment. Bill Bryson The Mother Tongue emotional than when they used English to describe the same kind of pictures. Likewise, when students in Hong Kong were asked to complete a values test, they expressed more traditional Chinese values when they answered in English. In Israel, both Arab
and Jewish students saw bigger distinctions between their group and "outsiders" when using their native language to shape cultural identity—sometimes for better and sometimes for worse. Linguistic influences start early in life. English-speaking parents
often label the mischievous pranks of their children as "bad," implying that there is something immoral about acting wild. "Be good!" they are inclined to say. On the other hand, French parents are more likely to say "Sois sage!"—"Be wise." The linguistic implication is that misbehaving is an act of foolishness. Swedes would correct the same action
with the words "Var snall!"—"Be friendly, be kind." By contrast, German adults would use the command "Sei artig!"—literally, "Be of your own kind"—in other words, get back in step, conform to your role as a child.72 The best-known declaration of linguistic determinism is the Whorf-Sapir hypothesis, formulated by Benjamin Whorf, an amateur
linguist, and anthropologist Edward Sapir. 73 Following Sapir's theoretical work, Whorf found that the language spoken by the Hopi language makes no distinction between nouns and verbs. Therefore, the people who speak it describe the entire
```

```
world as being constantly in process. Whereas we use nouns to characterize people or objects as being fixed or constant, the Hopi view them more as verbs, constantly changing. In this sense our language represents much of the world rather like a snapshot camera, whereas Hopi reflects a worldview more like a motion picture. Although the Whorf-
Sapir hypothesis originally focused on foreign languages, Neil Postman illustrates the principle with an example closer to home. He de- 074-113 Ch03 Adler 108 2/28/05 PART ONE 9:40 AM Page 108 ELEMENTS OF COMMUNICATION scribes a hypothetical culture where physicians identify patients they treat as "doing" arthritis and other diseases
instead of "having" them and where criminals are diagnosed as "having" cases of criminality instead of "being" criminals.74 The implications of such a linguistic difference are profound. We believe that characteristics people "have"—what they "are "beyond their control, whereas they are responsible for what they "do." If we changed our view of
what people "have" and what they "do," our attitudes would most likely change as well. Postman illustrates the consequences of this linguistic difference as applied to education: In schools, for instance, we find that tests are given to determine how smart someone is or, more precisely, how much smartness someone "has." If one child scores a 138,
and another a 106, the first is thought to "have" more smartness than the other. But this seems to me a strange conception—every bit as strange as "doing" arthritis or "having" criminality. I do not know anyone who has smartness. The people I know sometimes do smart things (as far as I can judge) and sometimes do stupid things—depending on
what circumstances they are in, and how much they know about a situation, and how interested they are. "Smartness," so it seems to me, is a specific performance, done in a particular set of circumstances. It is not something you are or have in measurable quantities. . . . What I am driving at is this: All language is metaphorical, and often in the
subtlest ways. In the simplest sentence, sometimes in the simplest word, we do more than merely express ourselves. We construct reality along certain lines. We make the world according to our own imagery. 75 Although there is little support for the extreme linguistic deterministic viewpoint that it is impossible for speakers of different languages to
view the world identically, the more moderate notion of linguistic relativism—the notion that languages are not so much in what it is relatively easy to say."76 Some languages contain terms that have no exact
English equivalents.77 For example, consider a few words in other languages that have no exact English equivalents:
(French) An extra gift given in a transaction that wasn't expected by the terms of a contract Lao (Mandarin) A respectful term used for older people, showing their importance in the family and in society Dharma (Sanskrit) Each person's unique, ideal path in life and the knowledge of how to find it Koyaanisquatsi (Hopi) Nature out of balance; a way of
life so crazy it calls for a new way of living After words like these exist and become a part of everyday life, the ideas that they represent are easier to recognize. But even without such words, each of the concepts mentioned earlier is still possible to imagine. Thus, speakers of a language that includes the notion of lao would probably treat older
members respectfully, and those who are familiar with lagniappe might be more generous. Despite these differences, the words aren't essential to follow these principles. Although language may shape thoughts and behavior, it doesn't dominate them absolutely. 074-113 Ch03 Adler 2/28/05 9:40 AM Page 109 CHAPTER 3 LANGUAGE 109 WHEN
WORDS HURT Words are scalpels, every bit as sharp as a surgeon's tools, and sometimes almost as dangerous. Cutting words are at their worst when they inadvertently reveal what the speaker—the doctor—really thinks. Take "incompetent cervix." Granted, this is a succinct way to describe a cervix that can't keep
the womb properly closed throughout a pregnancy. But we never hear the term "incompetent penis." Far worse is the common phrase, "The patient failed chemotherapy." Who or what really failed here? "The therapy failed the patient failed chemotherapy." Who or what really failed here? "The therapy failed the patient failed chemotherapy." Who or what really failed here? "The therapy failed the patient failed chemotherapy." Who or what really failed here? "The therapy failed the patient failed chemotherapy." Who or what really failed here? "The therapy failed the patient failed chemotherapy." Who or what really failed here? "The therapy failed the patient failed chemotherapy." Who or what really failed here? "The therapy failed the patient failed chemotherapy." Who or what really failed here? "The therapy failed the patient failed chemotherapy." Who or what really failed here? "The therapy failed the patient failed chemotherapy." Who or what really failed here? "The therapy failed the patient failed chemotherapy." Who or what really failed here? "The therapy failed the patient failed chemotherapy." Who or what really failed here? "The therapy failed the patient failed chemotherapy." Who or what really failed here? "The therapy failed the patient failed chemotherapy." Who or what really failed here? "The therapy failed here?" "Th
"the patient has cough but denies phlegm." Sure, it lets one doctor know that another has asked a patient about this, but the not-so-hidden connotation is that the patient is a liar. As a much-published poet, Dr. Rafael Campo, a primary care physician at Beth Israel Deaconess Medical Center in Boston, is attuned to the potential damage—and the
healing power—of words. "Some of the language we are talking about here is pervasive in the medical profession and does potentially undermine the relationship between doctors and patients," he says. For example, doctors often say the patient sound whiny, like "an adversary," Campo
says. "Just the other day, an intern was presenting a patient [to me] in front of the patient. He said, 'Mrs. So and So is here complaining, I was just telling you how I feel.'" Says Campo, the author of The Healing Art: A Doctor's Black Bag of Poetry. "There is no handbook for medicalese that says we have to
talk in these terms. . . . But it's this kind of shorthand formulas that gets passed down from one generation of doctors to the next." Judy Foreman Los Angeles Times, February 9, 2004 Language Use in North American Culture The importance of language as a reflection of worldview isn't just a matter of interest for anthropologists and linguists. The
labels we use in everyday conversation both reflect and shape the way we view ourselves and others. This explains why businesses often give employees impressive titles and why a woman's choice 074-113 Ch03 Adler 110 2/28/05 PART ONE 9:40 AM Page 110 ELEMENTS OF COMMUNICATION of the label "Ms." or "Mrs." can be a statement about
her identity. Women in Western society face a conscious choice about how to identify themselves when they marry. They may follow the tradition of taking their husband's, or keep their birth name, or hyphenate their birth name, or hyphenate their birth name with their husband's, or keep their birth name, or hyphenate the hyphenate their birth name, or hyphenate the hyphenate their birth name, or hyphenate the hyphenate th
herself and her relationship with her husband. 78 Surveys revealed that women who have taken their husbands' names place the most importance on relationships, with social expectations of how they should behave placing second, and issues of self coming last. By contrast, women who have kept their birth names put their personal concerns ahead of
relationships and social expectations. Women with hyphenated names fall somewhere between the other groups, valuing self and relationships equally. In the same way, the labels of racial identification have gone through
cycles of popularity.79 In North America, the first freed slaves preferred to be called "Africans." In the late nineteenth and early twentieth centuries colored was the term black grew increasingly popular—first as a label for militants and later as a term preferred by
more moderate citizens of all colors. More recently African American has gained popularity.80 Decisions about which name to use reflect a person's attitude. For example, one survey revealed that individuals who prefer the label black choose it because it is "acceptable" and "based on consensus" of the larger culture.81 They describe themselves as
patriotic, accepting of the status quo, and attempting to assimilate into the larger culture. By contrast, people who choose the term Afro-American derive their identity from their ethnicity and do not want to assimilate into the larger culture, only to succeed in it. The label others choose can also be revealing. Political liberals are more likely to use the
term African American than are conservatives.82 SUMMARY Language is both one of humanity's greatest assets and the source of many problems. This chapter highlighted the characteristics that distinguish language and suggested methods of using it more effectively. Any language is a collection of symbols governed by a variety of rules and used to
convey messages between people. Because of its symbolic nature, language is not a precise tool: Meanings rest in people, not in words themselves. In order for effective communication to occur, it is necessary to negotiate meanings for ambiguous statements. Language is not only descr ibes people, ideas, processes, and events; it also shapes our
perceptions of them in areas including status, credibility, and attitudes about gender and ethnicity. Along with influencing our attitudes, language reflects them. The words we use and our manner of speech reflect power, responsibility, affiliation, attraction, and interest. Many types of language have the potential to create misunderstandings. Other
types of language can result in unnecessary conflicts. In other cases, speech and writing can be evasive, avoiding expression of unwelcome messages. The relationship between gender and language is a confusing one. There are many differences in the ways men and women speak: The content of their conver- 074-113 Ch03 Adler 2/28/05 9:40 AM
Page 111 CHAPTER 3 sations varies, as do their reasons for communicating and their conversational styles. Not all differences in language use can be accounted for by the speaker's gender, however. Occupation, social philosophy, and orientation toward problem solving also influence the use of language, and psychological sex role can be more of an accounted for by the speaker's gender, however.
influence than biological sex. Language operates on a broad level to shape and reflect the views of a culture. Low-context cultures like that of the United States use language primarily to express feelings and ideas as clearly and unambiguously as
possible, whereas high-context cultures avoid specificity to promote social harmony. Some cultures value brevity and the succinct use of language, whereas in others informality is important. Beyond these differences, there is evidence to support linguistic
relativism—the notion that language exerts a strong influence on the worldview of the people who speak it. KEY TERMS abstract language 92 abstraction ladder 92 behavioral description 92 convergence 87 divergence 88 divergence 
statement 95 jargon 90 language 76 linguistic determinism 106 linguistic relativism 108 low-context culture 104 opinion statement 94 phonological rules 79 sex role 102 slang 89 symbols 76 syntactic rules 79 Whorf-Sapir hypothesis 107 ACTIVITIES 1. Powerful Speech and Polite Speech
Increase your ability to achieve an optimal balance between powerful speech by rehearsing one of the following scenarios: 

Requesting an extension on a deadline from one of your professors. 

Explaining to a merchant why you
 want a cash refund on an unsatisfactory piece of merchandise when the store's policy is to issue credit vouchers. Asking your boss for three days off so you can attend a friend's out-of-town wedding.
powerless language listed in Table 3-1. You should not become abusive or threatening, and your statement should be completely honest. 2. Slang and Jargon Find a classmate, neighbor, coworker, or other person whose background differs significantly from yours. In an interview, ask this person to identify the slang and jargon terms that you take for
granted but that he or she has found confusing types of potentially confusing terms: 1. 2. 3. 4. regionalisms age-related terms technical jargon acronyms 3. Low-Level Abstractions You can develop your ability to use low-level abstractions by following these steps: 1. Use your own experience to write each of the following: a. a
complaint or gripe b. one way you would like someone with whom you interact to change c. one reason why you appreciate a person or people involved b. the circumstances in which the behavior occurs c. the
specific behaviors to which you are referring 3. Compare the statements you have written in Steps 1 and 2. How might the lower-level abstractions in Step 2 improve the chances of having your message understood and accepted? 074-113 Ch03 Adler 112 2/28/05 PART ONE 9:40 AM Page 112 ELEMENTS OF COMMUNICATION 4. Gender and
Language 1. Note differences in the language use of three men and three women you know. Include yourself in the analysis. Your analysis will be most accurate if you tape record the speech of each person you analysis will be most accurate if you tape record the speech of each person you analysis. Your analysis will be most accurate if you tape record the speech of each person you analyse.
speech 2. Based on your observations, answer the following questions: a. How much does gender influence speech? b. What role do other variables play? Consider o c c u p a t i o n a l o r s o c i a l s t a t u s , c u l t u ra l background, social philosophy, competitive cooperative orientation, and other factors in your analysis. FOR FURTHER
 EXPLORATION For a more detailed list of readings about language, see the CD-ROM that came with this book, and the Understanding Human Communication, 2nd ed. Hillsdale, NJ: Lawrence Erlbaum, 1999. The book covers a wide range of topics
including the origins of language, a review of the field of linguistics, a look at the mental processes that govern language operates in everyday conversations. Rheingold has collected a lexicon of words and phrases from languages around the world that
lend support to the Sapir-Whorf hypothesis. This entertaining 200-page compendium of "untranslatable phrases" illustrates that speaking a new language can, indeed, prompt a different world view. Tannen, Deborah. Gender and Discourse. New York: Oxford University Press, 1995. You Just Don't Understand: Women and Men in Conversation. New
York: Morrow, 1990. Talking from 9 to 5. New York: Morrow, 1994. Gender and Discourse provides a more scholarly look at the connection between men and women. Wood, Julia. Gendered Lives, 6th
ed. Belmont, CA: Wadsworth, 2005. Chapter 5, "Gendered Verbal Communication," offers a good survey of the relationship between langua ge and the way we think a bout men and women in society. Feature Films For descriptions of each film below and descriptions of other movies that illustrate language, see the CD-ROM that came with this book,
and the Understanding Human Communication Web site at www.oup.com/us/ uhc. Jargon and Slang Clueless (1995). Rated PG-13. Cher (Alicia Silverstone) and her friend Dionne (Stacey Dash) are teen queens at a posh Beverly Hills high school. This film's opening line is "So, OK, you're probably like—what is this, a Noxzema commercial?" From
beginning to end, the characters offer a clever, if exaggerated, illustration of how jargon and slang operate in youth culture. The Nature of Language Nell (Jodie Foster), a young woman who has had no contact with the outside world for
virtually her entire life. In her seclusion, Nell developed her own language and her unique way of perceiving the world. 074-113 Ch03 Adler 2/28/05 9:40 AM Page 113 CHAPTER 3 LANGUAGE 113 Language and Social Class Language and Culture My Fair
Lady (1964). Rated G. Children of a Lesser God (1986). Rated R. In this Academy Award-winning musical, linguistics professor Henry Higgins (Rex Harrison) takes on the professional challenge of his life: teaching cockney flower girl Eliza Doolittle (Audrey Hepburn) to masquerade as royalty by learning proper elocution. The film illustrates—albeit in a
romanticized manner—the importance of language as a marker of social status. Also available on videocassette is a nonmusical 1938 version, titled Pygmalion after the original comedy by George Bernard Shaw. John Leeds (William Hurt) takes a job at a boarding school for deaf children, where he meets Sarah (Marlee Matlin). John is both attracted to
and frustrated by Sarah's passionate refusal to learn lipreading, which she views as a concession to the hearing world and a compromise of the integrity and value of sign language. The story chronicles Leeds's changes in attitudes about the relationship of deaf and hearing people, as well as following the development of his relationship with
Sarah. This film introduces viewers to the linguistic and cultural world of the deaf. Through it we learn some fundamental differences between sign and spoken language, as well as learning more about how the deaf suffer from many misunderstandings and stereotypes. 114-151_Ch04_Adler 2/28/05 9:42 AM Page 114 AFTER STUDYING THE
MATERIAL IN THIS CHAPTER . . . You should understand: 1. The most common misconceptions about listening difficult. 5. The skills necessary to listen effectively in informational, critical, and empathic
settings. You should be able to: 1. Identify situations where you listen ineffectively and explain the reasons for your lack of effectiveness. 2. Identify the consequences of your ineffective listening. 3. Follow the guidelines for informational listening. 4. Analyze an argument or claim by evaluating the credibility of its proponent, the quality of evidence
offered, and the soundness of its reasoning. 5. Apply appropriate response styles in an empathic listening context. 114-151_Ch04_Adler 2/28/05 9:42 AM Page 115 CHAPTER HIGHLIGHTS Most people need to think about listening in a new way.
and practice to do well. It's probable that people will hear the same message in different ways. Most people use one of four personal listening styles Content-oriented People will hear the same message in different ways.
critically evaluate a speaker's ideas Minimize faulty listening behaviors To help others with their problems Understand some of the reasons you listen poorly CHAPTER FOUR Listening 114-151_Ch04_Adler 116 2/28/05 PART ONE 9:42 AM Page 116 ELEMENTS OF COMMUNICATION They call me the Speaker, but . . . they really ought to call
me the Listener. Dennis Hastert, Speaker of the U.S. House of Representatives In a world where almost everyone acknowledges the importance of better communication, the need for good listening is just as important as speaking. After all, it's impossible for communication to occur without someone
receiving a message. (Imagine how ridiculous it would be to speak to an empty room or talk into a disconnected telephone.) If frequency is a measure of importance, then listening to other type of communication. One study revealed that of
their total communicating time, college students spent an average of 14 percent writing, 16 percent speaking, 17 percent reading, and a whopping 53 percent listening is by far the most common form of communication. On the job, listening is by far the most common form of communication are writing, 16 percent writing, 17 percent writing, 18 percent writing, 18 percent writing, 19 percent writing, 10 perce
listening to others. 2 Besides being the most frequent form of communication, listening is arguably just as important as speaking. When a group of adults was asked to identify the most important on-the-job communication skills, listening and career success revealed that better
listeners rose to higher levels in their organizations. A survey of personnel managers identified listening as the most critical skill for working effectively in teams. In one survey, marital counselors identified "failing to take
the other's perspective when listening" as one of the most frequent communication problems in the couples with whom they work.6 When another group of adults was asked which communication skills were most important in family and social settings, listening was ranked first. 7 In committed relationships, listening to personal information in
everyday conversations is considered an important ingredient of satisfaction. For this reason, some theorists have argued that effective listening we and others do is not at all effective. We misunderstand
others and are misunderstood in return. We become bored and feign attention while our minds wander. We engage in a battle of interruptions where each person fights to speak without hearing the other's ideas. Some of this poor listening is inevitable, perhaps even justified. But in other cases we can be better receivers by learning a few basic
listening skills. This chapter will help you become a better listening and show you what really happens when listening takes place. We'll discuss some poor listening habits, explain why they occur, and suggest better
alternatives. MISCONCEPTIONS ABOUT LISTENING In spite of its importance, listening is misunderstandings so greatly affect our communication, we need to take a look at four communication, we need to take a look at four communication, we need to take a look at four communication, we need to take a look at four communication, we need to take a look at four communication, we need to take a look at four communication, we need to take a look at four communication, we need to take a look at four communication, we need to take a look at four communication, we need to take a look at four communication, we need to take a look at four communication, we need to take a look at four communication, we need to take a look at four communication, we need to take a look at four communication at four 
listen to it! Tom Galloway Listening and Hearing Are Not the Same Thing Hearing is the process in which sound waves strike the eardrum and cause vibrations that are transmitted to the brain. Listening occurs when the brain reconstructs these electrochemical impulses into a representation of the original 114-151 Ch04 Adler 2/28/05 9:42 AM Page
117 CHAPTER 4 sound and then gives them meaning. Barring illness, injury, or earplugs, hearing can't be stopped. Your ears will pick up sound waves and transmit them to your brain whether you want them to or not. Listening, however, isn't automatic. Many times we hear but do not listen. Sometimes we deliberately tune out unwanted signals: ever
ything from a neighbor's power lawn mower or the roar of nearby traffic to a friend's boring remarks or a boss's unwanted criticism. A closer look at listening—the act of paying attention to a signal. An individual's needs, wants,
desires, and interests determine what is attended to, or selected, to use the term introduced in Chapter 2. The next step in listening is understanding possible: a grasp of the syntax of the language being spoken, semantic
decoding, and knowledge of the pragmatic rules that help you figure out a speaker's meaning from the context. In addition to these steps, understanding often depends on the ability to organize the information we hear into recognizable form. As early as 1948, Ralph Nichols related successful understanding to a large number of factors, most
prominent among which were verbal ability, intelligence, and motivation. 10 Responding to a message consists of giving observable feedback to the speaker. Offering feedback serves two important functions: It helps you clarify your understanding of a speaker is saying. Listeners don't
 always respond visibly to a speaker—but research suggests that they should. One study of 195 critical incidents in banking and medical settings showed that a major difference between effective listening and ineffective listening was the kind of feedback offered.11 Good listeners showed that they were attentive by nonverbal behaviors such as
keeping eye contact and reacting with appropriate facial expressions. Their verbal behavior—answering questions and exchanging ideas, for example—also demonstrated their attention. It's easy to imagine how other responses would signal less effective listening. A slumped posture, bored expression, and yawning send a clear message that you are
not tuned in to the speaker. Adding responsiveness to our listening model demonstrates the fact, discussed in Chapter 1, that communication is transaction. At the same time that we receive messages we also send them. The final
step in the listening process is remembering. 12 Research has revealed that people work hard at listening. This is true even if people work hard at listening. This is true even if people work hard at listening. This is true even if people work hard at listening. This is true even if people work hard at listening. forgotten, bringing what we remember down to about 25 percent of the original message. This loss, however, doesn't take two months: People start forgetting immediately (within eight hours the 50 percent remembered drops to about 35 percent). Given the amount of information we process every day—from instructors, friends, the radio, TV, and
LISTENING 117 I can't help hearing, but I don't always listen. George Burns CULTURAL IDIOM tune out: not listen tuned in: focused, paying attention 114-151 Ch04 Adler 118 2/28/05 PART ONE 9:42 AM Page 118 ELEMENTS OF COMMUNICATION UNDERSTANDING COMMUNICATION TECHNOLOGY TELEVISION AND POOR LISTENING
 behavior at age 7 on a scale similar to one used to diagnose attention deficit disorders. Children who watched less than an hour of TV daily. The children who watched three to four hours daily had a 30 percent to 40 percent
 increased risk compared with children who watched no TV. These results fit with earlier research showing that TV can shorten attention spans, and it supports the American Academy of Pediatrics recommendations that youngsters under age two not watch television. The researchers concluded that the content of programs probably isn't what causes
thinking problems. Instead, they believe that the rapid-fire visual images common in children's TV programming may overstimulate and permanently "rewire" the developing brain. Dimitri A. Christakis, Frederick J. Zimmerman, David L. DiGiuseppe, and Carolyn A. McCarty, "Early Television Exposure and Subsequent Attentional Problems in
Children," Pediatrics 113 (2004): 708-713. other sources—the residual message (what we remember) is a small fraction of what we hear. Listening is like breathing: a natural activity that people do well. The truth is that listening is a skill much like speaking: Everybody does it, though
perceptions of the managers' subordinates, many of whom said their boss's listening is inevitable. The good news is that listening is far less than that devoted to
 other types of communication. Table 4-1 reflects this upside-down arrangement. guarantees that the respondent will fail to grasp at least some of the speaker's ideas and misunderstand others. All Listeners Do Not Receive the Same Message When two or more people are listening to a speaker, we tend to assume that they all are hearing and understanding the same message. In fact, such uniform comprehension isn't the
case.Recall the discussion of perception in Chapter 2, where we pointed out the many factors that cause each of us to perceive an event differently. Physiological factors, social roles, cultural background, personal interests, and needs all shape and distort the raw data we hear into uniquely different messages. OVERCOMING CHALLENGES TO
EFFECTIVE LISTENING Despite the importance of good listening, people seem to get worse at the skill as they grow older. 16 Teachers at various grade levels were asked to stop their lectures periodically and ask students what they grow older. 16 Teachers at various grade levels were asked to stop their lectures periodically and ask students what they grow older. 16 Teachers at various grade levels were asked to stop their lectures periodically and ask students what they grow older. 16 Teachers at various grade levels were asked to stop their lectures periodically and ask students what they grow older. 16 Teachers at various grade levels were asked to stop their lectures periodically and ask students what they grow older. 16 Teachers at various grade levels were asked to stop their lectures periodically and ask students what they grow older. 16 Teachers at various grade levels were asked to stop their lectures periodically and ask students what they grow older. 18 Teachers at various grade levels were asked to stop their lectures periodically and ask students what they grow older. 19 Teachers at various grade levels were asked to stop their lectures periodically and ask students what they grow older. 19 Teachers at various grade levels were asked to stop their lectures periodically and ask students which is the periodical grade levels were asked to stop their lectures periodically and ask students which is the periodical grade levels were asked to stop their lectures periodically and ask students which is the periodical grade levels which is the periodical grade levels were asked to stop their levels were asked to stop their levels which is the periodical grade levels were asked to stop their levels
percent of the second-graders could do so; but when the experiment was repeated with teenagers, the results were much less impressive. Only 44 percent of junior high students and 28 percent of senior high students could repeat their teachers' remarks. Research suggests that adults listen even more poorly—at least in some important
relationships. One experiment found that people listened more attentively and courteously to strangers than to their spouses. When faced with decision-making tasks, couples interrupted one another more frequently and were generally less polite than they were to strangers 17 What kinds of poor listening habits plague communication? To find out,
read on. Faulty Listening Behaviors Although we can't listen effectively all the time, most people possess one or more habits that keep them from understanding truly important messages. PSEUDOLISTENING Pseudolistening is an imitation of the real thing. Pseudolistening is an imitation of the real thing.
at the right times, and even may answer you occasionally. Behind that appearance of interest, however, something entirely different is going on, because pseudolisteners use a polite facade to mask thoughts that have nothing to do with what the speaker is saying. SELECTIVE LISTENING Selective listeners respond only to the parts of a speaker's
remarks that interest them, rejecting everything else. All of us are se- Not comprehending, they hear like the deaf. Heraclitus 114-151 Ch04 Adler 120 2/28/05 PART ONE 9:42 AM Page 120 ELEMENTS OF COMMUNICATION Source: PEANUTS reprinted by permission of United Feature Syndicate, Inc. lective listeners from time to time as, for
instance, when we screen out media commercials and music while keeping an ear cocked for a weather report or an announcement of time. In other cases, selective listening occurs in conversation turns to the partner's favorite topic—perhapse
money, sex, a hobby, or some particular person. Unless and until you bring up one of these pet topics, you might as well talk to a tree. DEFENSIVE LISTENING Defensive listeners take innocent comments as personal attacks. Teenagers who perceive parental questions about friends and activities as distrustful snooping are defensive listeners, as are
insecure breadwinners who explode when their mates mention money and touchy parents who view any questioning by their children as a threat to their authority and parental wisdom. Many defensive listeners are suffering from shaky public images and avoid admitting this by projecting their insecurities onto others. AMBUSHING Ambushers listen
carefully, but only because they are collecting information to attack what you have to say. The cross-examining prosecution attorney is a good example of an ambusher. Using this kind of strategy will justifiably initiate defensiveness on the other's behalf. INSULATED LISTENING Insulated listeners are almost the opposite of their selective-listening
cousins. Instead of looking for something specific, these people avoid it. Whenever a topic arises they'd rather not deal with, insulated listeners simply fail to hear it or, rather, to acknowledge it. If you remind them about a problem—perhaps an unfinished job, poor grades, or the like—they'll nod or answer you and then promptly forget what you've just
said. CULTURAL IDIOM keeping an ear cocked: listening alertly pet: favorite breadwinners: those who support their families with their earnings at face value: literally INSENSITIVE LISTENING Insensitive listeners are the final example of people who don't receive another person's messages clearly. People often don't express their thoughts or
feelings openly but instead communicate them through subtle and unconscious choice of words or nonverbal clues or both. Insensitive listeners aren't able to look beyond the words and behavior to understand their hidden meanings. Instead, they take a speaker's remarks at face value. STAGE HOGGING Stage hogs (sometimes called "conversationa"
narcissists") try to turn the topic of conversations to themselves instead of showing interest in the 114-151_Ch04_Adler 2/28/05 9:42 AM Page 121 CHAPTER 4 speaker.18 Interruptions are a hallmark of stage hogging. Besides preventing the listener from learning potentially valuable information, stage hogging can damage the relationship between
the interrupter and the speaker. For example, applicants who interrupt the questions of an employment interviewer are likely to be rated less favorably than job seekers who wait until the interviewer has finished speaking before they respond in one of two ways. Sometimes the strategy is passive:
talking less, tuning out the speaker, showing boredom nonverbally, and leaving the conversation. Other strategies are more active: trying to recapture the floor, hinting about the speaker about his or her narcissism. Reactions like these give stage hog's dominance, or confronting the conversation.
into a verbal tug-of-war. LISTENING 121 CULTURAL IDIOM tuning out: not listening a taste of their own medicine: retaliating by responding in a similar manner tug-of-war. contest or struggle Reasons For Poor Listening What causes people to listen poorly? There are several reasons, some of which can be avoided and others that are sad but
inescapable facts of life. EFFORT Listening effectively is hard work. The physical changes that occur during careful listening show the effort it takes: Heart rate quickens, respiration increases, and body temperature rises. 20 Notice that these changes are similar to the body's reaction to physical effort. This is no coincidence, because listening carefully
to a speaker can be just as taxing as more obvious efforts. You can manage the effort that's required to listen well if you prepare yourself for the task. If you know that passive listening won't be enough, you can invest the energy to understand others. MESSAGE OVERLOAD The amount of speech most of us encounter every day makes careful listening
to everything we hear impossible. As we've already seen, many of us spend as much as one-third of the time we're awake listening to verbal messages—from teachers, coworkers, friends, family, salespeople, and total strangers. This means we often spend five hours or more a day listening to people talk. If you add this to the amount of time we tune in
radio and television, you can see that it's impossible for us to keep our attention totally focused for that amount of time. Therefore, we have to let our attention, you can devote the time it takes to understand them. RAPID THOUGHT Listening carefully is also
difficult for a physiological reason. Although we are capable of understanding speech at rates up to 600 words per minute, the average person speaks between 100 and 140 words per minute. Thus, we have a great deal of mental "spare time" to spend while someone is talking. And the temptation is to use this time in ways that don't relate to the
speaker's ideas, such as thinking about personal interests, daydreaming, planning a rebuttal, and so on. The trick is to use this spare time to understand the speaker's ideas better rather than to let your attention wander. Try to rephrase the speaker's ideas in your own words. Ask yourself how the ideas might be useful to you. Consider other angles
that the speaker might not have mentioned. Easy listening is a style of music, not communication. Harvey Mackay 114-151_Ch04_Adler 122 2/28/05 PART ONE 9:42 AM Page 122 ELEMENTS OF COMMUNICATION CULTURAL IDIOM charade: pretense PSYCHOLOGICAL NOISE Another reason why we don't always listen carefully is that we're often
wrapped up in personal concerns that are of more immediate importance to us than the messages others are sending. It's hard to pay attention to someone else when you're anticipating an upcoming test or thinking about the wonderful time you had last night with good friends. Yet, we still feel we have to "listen" politely to others, and so we continue
with our charade. It usually takes a conscious effort to set aside your personal concerns if you expect to give others' messages the attention they deserve. Figure 4-1 illustrates four ways in which preoccupation is
both a reason for and a sign of poor listening. PHYSICAL NOISE The world in which we live often presents distractions that make it hard to pay attention to others. The sound of traffic, music, others's peech, Line of communication Private
argument Line of communication Large departures Line of communication Figure 4-1 Four Thought Patterns. Source: A. D. Wolvin and C. G. Coakley, Perspectives on Listening (Norwood, NJ: Ablex, 1993), p. 115. 114-151_Ch04_Adler 2/28/05 9:42 AM Page 123 CHAPTER 4 LISTENING UNDERSTANDING DIVERSITY DEAFNESS LITE So slight is the
bereftness of my belated ear-fault that "Deafness Lite" became the name that I call it. In a simpler word: things heard are blurred on the left as well (or as weakly) as right. Neither half's loss is a matter too drastic both partly "cured" by batteries in plastic. But if eyeing such signs of silence, Hearer, or (harder to do) spying a less visible clue try, by
turning your speech slow and clearer to reach those few who must communicate anew. And so that is why as their advocate I ask you unafflicted this: Make me your talking's target and practice, prac
other souls who less than I can hear. Repeat. Reword. For patience may reward your self, not by some sense of the charity kind but by sharing the very daringest adventure: eyes meeting eyes and mind mating with mind. Sal Parlato, Jr. and the like interfere with our ability to hear well. Also, fatigue or other forms of discomfort can distract us from
 paying attention to a speaker's remarks. Consider, for example, how the efficiency of your listening decreases when you are seated in a crowded, hot, stuffy room that is surrounded by traffic and other noises. In such circumstances even the best intentions aren't enough to ensure clear understanding. You can often listen better by insulating yourself
from outside distractions. This may involve removing the sources of noise: turning off the television, shutting the book you were reading, closing the window, and so on. In some cases, you and the speaker may need to find a more hospitable place to speak in order to make listening work. HEARING PROBLEMS Sometimes a person's listening ability
suffers from a hearing problem—the most obvious sort of physiological noise, as defined in Chapter 1. After a hearing problem has been diagnosed, it's often possible to treat it. The real tragedy occurs when a hearing loss goes undetected. In such cases, both the person with the defect and others can become frustrated and annoyed at the ineffective
communication that results. If you suspect that you or someone you know suffers from a hearing loss, it's wise to have a physician or audiologist perform an examination. FAULTY ASSUMPTIONS We often give others a mental brush-off because we assume their remarks don't have much value. When one business consultant asked some of her clients
why they interrupted colleagues, she received the following responses: My idea is better than theirs. If I don't interrupt them, I'll never get to say my idea. CULTURAL IDIOM give...brush-off: to dismiss or not pay attention to 123 114-151_Ch04_Adler 124 2/28/05 PART ONE 9:42 AM Page 124 ELEMENTS OF COMMUNICATION CULTURAL IDIOM
rule out: fail to consider wit: a clever conversationalist grab the stage: gain attention I know what they are about to say. They don't need to finish their thoughts since mine are better. Nothing about their idea will improve with further development. It is more important for me to get recognized than it is to hear their idea. I'm more important than they
are.22 The egotism behind these comments is stunning. Dismissing others' ideas before considering them may be justified sometimes, but it's obviously a mistake to rule out so much of what others say . . . especially when you consider how you would feel if other people dismissed your comments without hearing you out. TALKING HAS MORE
APPARENT ADVANTAGES It often appears that we have more to gain by speaking than by listening. Whatever the goal—to have a prospective boss hire you, to convince others to vote for the candidate of your choice, or to describe the way you want your hair cut—the key to success seems to be the ability to speak well. Another apparent advantage of
speaking is the chance it provides to gain the admiration, respect, or liking of others—or so you may think. Tell jokes, and everyone may think you're a real wit. Offer advice, and they might be grateful for your help. Tell them all you know, and they could be impressed by your wisdom. Although speaking at the right time can lead people to appreciate
very different reasons: to communicate agreement, to elaborate on the speaker's idea, or to participate in the topic of conversation and not as attempts to grab the stage. If you find yourself hogging the conversation, try a simple experiment. Limit the
frequency and length of your responses to a fraction of their usual amount. If you were speaking 50 percent of the time, cut back to 25 percent.
NO ONE LISTENS? It is the law in this country, as in no other, that the individual has an extraordinary right to personal expression. The First Amendment to the Constitution protects the right to speak and to publish; these rights and the degree to which they are safeguarded are the distinguishing characteristics of American society. For that we have
only the courts to thank. Americans seem to be almost completely uninterested in any point of view other than their individual own. We are absolutely up to our necks in groups and blocs and religious and economic interests certain beyond all reason that they are correct and actively interested in imposing their rules and values and selfselected
enough that we reject censorship and will not countenance suppression; we have an affirmative responsibility to hear the argument before we disagree with it. I think that you think that you agree with me, that you are fair and open-minded and good citizens. But if we put it to the test—if I make up some speeches about gun control, abortion, gay
rights, racial and ethnic characteristics, political terrorism and genocide—I believe that I can make you boo and jeer or at least walk out in protest. We cannot operate that must be heard. No idea is so repugnant that it must not be advocated
If we are not free to speak heresy and utter awful thoughts, we are no longer citizens but have become part of the mob. Nowhere is the willingness to listen more important than at a university, and nowhere is our failure more apparent than at the
university whose faculty members or students think that it's legitimate to parade their own moral or political purity by shouting down the unpopular view of the day. It will not be a week, and certainly not a month, before you will become aware that someone in your own circle of influence is saying something or thinking something very wrong. I think
you have to do something about that. I think you have to help them be heard. I think you are required to listen. Kurt Luedtke closer to a minute. You are likely to discover that you're learning more—and probably gaining the appreciation of the other person. CULTURAL DIFFERENCES The way members of different cultures communicate can affect
vocal than Germans and focused on careful analysis of others'statements. By contrast, young Americans emphasized the social dimension of a conversation was taking. MEDIA INFLUENCES A final challenge to serious listening is the influence of contemporary mass media, especially television
and radio. A growing amount of programming consists of short segments: news items, commercials, music videos, and so on. (Think of Sesame Street and MTV.) In the same vein, news stories (for example, USA Today and the television news) consist of brief stories with a declining portion of text and a growing amount of graphical information. These
COMMUNICATION ETHICAL CHALLENGE HOW CAREFULLY SHOULD YOU LISTEN? What responsibility do communicators have to listen as carefully and thoughtfully as possible? Are there ever cases where we are justified in pseudolistening? Stage hogging? Defensive listening? Selective attention? Responding defensively? Ambushing?
Insensitivity? Is it dishonest to fake careful listening? How would you feel if you knew others weren't listening to you? PERSONAL LISTENING STYLES Not everyone listens the same way. Communication researchers have identified four styles,
each of which has both strengths and weaknesses.25 Content-Oriented As the label that characterizes them suggests, content-oriented listeners are most interested in the quality of messages they hear. They want to seek details and are good at analyzing an issue from several perspectives. They give weight to the messages of experts and other
credible sources of information. Contentoriented listeners often enjoy ideas for their own sake and are willing to spend time exploring them in thorough exchanges of ideas. A content-oriented approach is valuable when the goal is to evaluate the quality of ideas and when there is value in looking at issues from a wide range of perspectives. It is
especially valuable when the topic is a complicated one. On the other hand, a content-oriented approach risks annoying people who don't have the same sort of analytical orientation. A content-oriented approach can take more time than others may be willing to give, and the challenging of ideas that comes with it can be perceived as overly critical or
more interested in understanding and supporting people than in evaluating them.26 A people orientation has obvious strengths. But a strong concern for relationships has some less obvious drawbacks. It is easy to become overly involved with others' feelings. People-oriented listeners may lose their detachment and ability to assess the quality of
information others are giving in an effort to be congenial and supportive. Less personally oriented communicators can view them as overly expressive and even intrusive. CULTURAL IDIOM give weight to: give priority to tune into: pay attention to Action-Oriented Unlike people-oriented listeners, who focus on relationships, and content-oriented
listeners, who are fascinated with ideas for their own sake, action-oriented 114-151_Ch04_Adler 2/28/05 9:42 AM Page 127 CHAPTER 4 listeners are most concerned with the task at hand. Their main concern is to figure out what sort of response is required by a message. They want to get to the heart of the matter quickly, and so they appreciate
clear, concise messages and often translate others' remarks into well-organized mental outlines. Action-oriented listening is most appropriate when taking care of business is the primary concern: Such listeners keep a focus on the job at hand and encourage others to be organized and concise. But their no-nonsense approach isn't always appreciated
by speakers who lack the skill or inclination to be clear and direct. Action-oriented listeners seem to minimize emotional issues and concerns, which may be an important part of business and personal transactions. LISTENING 127 CULTURAL IDIOM put off: displease Time-Oriented listeners are most concerned with efficiency. They
view time as a scarce and valuable commodity. They grow impatient when they view others as wasting it. A time orientation can put off others when it seems to disregard their feelings. Also, an excessive focus on time can hamper the kind of
thoughtful deliberation that some jobs require. As you read the preceding descriptions, you may have found that you use more than one of the listening styles. If so, you aren't alone: 40 percent of the people who have used this instrument indicate at least two strong listening preferences. 27 Learn to listen. Opportunity could be Whichever styles you
use, it is important to recognize that you can control the knocking at your door very softly. way you listen and to use the styles that best suit the situation at hand. When your Frank Tyger relationship with the speaker needs attention, adopt a people-oriented approach. When clarity is the issue, be an action-oriented listener. If analysis is called for, put on
your content-oriented persona. And when the clock is what matters most, become a model of time orientation. You can also boost your efThe Chinese characters that make up the verb "to listen" fectiveness by assessing the listening prefertell us something significant about this skill. ences of your conversational partners and adapting your style to
 them. INFORMATIONAL LISTENING Informational listening is the approach to take when you want to understand another person. When you are an informational listener, your goal is to make sure you are receiving the same thoughts the other person. When you are an informational listener, your goal is to make sure you are thoughts the other person. When you are an informational listener, your goal is to make sure you are receiving the same thoughts the other person is trying to convey— not always an easy feat when you consider the forces listed on pages 121-125
                                                                                                                                                         an instructor's comments in class, listening to a friend's account of a night on the town, hearing a description of a new piece of equipment that you're thinking about buying, learning about your family history from a relative's tales,
EAR EYES UNDIVIDED ATTENTION HEART Calligraphy by Angie Au 114-151_Ch04_Adler 128 2/28/05 PART ONE 9:42 AM Page 128 ELEMENTS OF COMMUNICATION UNDERSTANDING DIVERSITY COUNCIL: REVIVING THE ART OF LISTENING Not too long ago, before our ears became accustomed to an increasing barrage of stimulation, many
people knew how to listen attentively, while tracking an animal or hearing the approach of rain—or sitting in council with a group of their peers. We know of no more effective way to invoke this state of listening than in what we have come to call the "council process." The origin of this process can be traced to the League of the Iroquois (which had a
powerful influence on the beginnings of our present governmental system) and the peoples of the plains and of the Southwestern pueblos. More recently, the traditional practice of council has emerged in contemporary form through the Native American Church. The roots of council has emerged in contemporary form through the Native American Church.
a gathering of men to resolve the bitter dispute between Achilles and Agamemnon. As we have practiced it, the basic form of council is simple. In order to empower each person to speak in turn, a "talking" object or "stick" is chosen to be passed around the circle—traditionally clockwise, in the "sun direction." The talking stick can be as innocent as a
flower just picked for the occasion or as venerable as a traditional hand-crafted artifact familiar to the group's integrity and its capability for spirited communication. We often set three simple rules for council: Speak
honestly, be brief, and listen from the heart. One of the great challenges is to not be thinking about what you're going to say until it's your turn to speak. Preparing your contribution before you receive the talking stick obviously diminishes its spontaneity and its responsiveness to what others have said. A good practice is to wait until the talking stick
is in your hands and then pause to see what springs to mind. Often we are surprised at the humor, tears, wisdom, or vision that comes forth. We share the concern many people have today about the superficial "playing Indian"—that is, the appropriation of another culture's traditions. We want to acknowledge how much we have learned from the
teachings of Native American peoples and our own ancestors. Council for us is a spiritual practice growing out of all our history, and a practice in which we seek to express these roots in a contemporary context. Jack Zimmerman and Virginia Coyle The Way of Council swapping ideas in a discussion about religion or politics—the list goes on and on
You can become more effective as an informational listener by approaching others with a constructive attitude and by using some simple but effective skills. Don't Argue or Judge Prematurely We can communicate an idea around the world in seventy seconds but it sometimes takes years for an idea to get through 1/4 inch of human skull. Charles
Kettering inventor and General Motors executive Ever since ancient Greece and later Rome, Western civilization has led us to measure the success of much communication in terms of whether it changes the way others think and act. Recall, for example, what often happens when people
encounter someone with differing opinions. Rather than try to understand one another, their conversation often turns into an argument or debate (sometimes friendly, and sometimes not) in which the participants try to change one another's minds. Persuasion is certainly one important goal of communication, but it isn't the only one. Most people
would agree with the principle that it's essential to understand a speaker's ideas before judgments, evaluating others before hearing them out. This tendency is greatest when the speaker's ideas conflict with our own. 114-151 Ch04 Adler 2/28/05 9:42 AM Page 129
CHAPTER 4 It's especially tempting to counterattack when others criticise you, even when those criticises might contain valuable truths and when understanding them might lead to a change for the better. Even if there is no criticise you, even when those criticises might contain valuable truths and when understanding them might lead to a change for the better. Even if there is no criticise you, even when those criticises you, even when those criticises are not contained to the contain valuable truths and when understanding them might lead to a change for the better. Even if there is no criticises you, even when those criticises you, even when those criticises are not contained to the contained t
all valid. Not all premature judgments are negative. It's also possible to jump to overly favorable conclusions about the quality of a speaker's remarks when we like that person or agree with the ideas being expressed. The lesson contained in these examples is clear: Listen first. Make sure you understand. Then evaluate or argue, if you choose
LISTENING 129 CULTURAL IDIOM write off: dismiss as worthless or unimportant Separate the Message from the Speaker The first recorded cases of blaming the messenger for an unpleasant message occurred in ancient Greece. When message from the Speaker The first recorded cases of blaming the message from the Speaker The first recorded cases of blaming the message from the Speaker The first recorded cases of blaming the message from the Speaker The first recorded cases of blaming the message from the Speaker The first recorded cases of blaming the message from the Speaker The first recorded cases of blaming the message from the Speaker The first recorded cases of blaming the message from the Speaker The first recorded cases of blaming the message from the Speaker The first recorded cases of blaming the message from the Speaker The first recorded cases of blaming the message from the Speaker The first recorded cases of blaming the message from the Speaker The first recorded cases of blaming the message from the Speaker The first recorded cases of blaming the message from the Speaker The first recorded cases of blaming the message from the Speaker The first recorded cases of blaming the message from the Speaker The first recorded cases of blaming the message from the Speaker The first recorded cases of blaming the message from the Speaker The first recorded cases of blaming the message from the Speaker The first recorded cases of blaming the message from the Speaker The first recorded cases of blaming the message from the Speaker The first recorded cases of blaming the message from the Speaker The first recorded cases of blaming the message from the Speaker The first recorded cases of blaming the message from the Speaker The first recorded cases of blaming the message from the Speaker The first recorded cases of blaming the message from the Speaker The first recorded cases of blaming the message from the Speaker The first recorded cases of blaming the first recorded cases of blaming the message from the speaker The fir
having the messengers put to death. This sort of irrational reaction is still common (though fortunately less violent) today. Consider a few situations in which there is a tendency to get angry with a communicator bearing unpleasant news: An instructor tries to explain why you did poorly on a major paper; a friend explains what you did to make a fool of
yourself at the party last Saturday night; the boss points out how you could do your job better. At times like this, becoming irritated with the bearer of unpleasant information not only can cause you to miss important information, but also can harm your relationships. There's a second way that confusing the message and the message and the message are can prevent you
from understanding important ideas. At times you may mistakenly discount the walue of a message because of the person who is presenting it. Even the most boring instructors, the most idiotic relatives, and the most demanding bosses occasionally make good points. If you write off everything a person says before you consider it, you may be cheating
yourself out of some valuable information. Be Opportunistic Even if you listen with an open mind, sooner or later you will end up hearing information that is either so unimportant or so badly delivered that you're tempted to tune out. Although making a quick escape from such tedious situations is often the best thing to do, there are times when you
can profit from paying close attention to apparently worthless communication. This is especially true when you're trapped in a situation where the only alternatives to attention to apparently worthless communication. This is especially true when you're trapped in a situation where the only alternatives to attention to apparently worthless communication. This is especially true when you're trapped in a situation where the only alternatives to attention to apparently worthless communication. This is especially true when you're trapped in a situation where the only alternatives to attention to apparently worthless.
how you might listen opportunistically when you find yourself locked in a boring conversation with someone whose ideas are worthless. Rather than torture yourself until escape is possible, you could keep yourself amused—and perhaps learn something useful—by listening carefully until you can answer the following (unspoken) questions: "Is there
anything useful in what this person is saying?" "What led the speaker to come up with ideas like these?" "What lessons can I learn from this person that will keep me from sounding the same way in other situations?" There is no such thing as an uninteresting subject. There are only uninterested people. G. K. Chesterton 114-151 Ch04 Adler 130
2/28/05 PART ONE 9:42 AM Page 130 ELEMENTS OF COMMUNICATION Listening with a constructive attitude is important, but even the best intentions won't always help you understand others. The following skills can help you figure out messages that otherwise might be confusing, as well as help you see how those messages can make a difference
in your life. Look for Key Ideas It's easy to lose patience with long-winded speakers who never seem to get to the point—or have a point, for that matter. Nonetheless, most people do have a central idea, or what we will call a "thesis" in Chapter 1. By using your ability to think more quickly than the speaker can talk, you may be able to extract the thesis
from the surrounding mass of words vou're hearing. If you can't figure out what the speaker is driving at, you can always ask in a tactful way by using the skills of questioning involves asking for additional information to clarify your idea of the sender's message. If you ask
directions to a friend's house, typical questions might be "Is your place an apartment?" or "Why are you so angry?" or "Why are you so angry?" or "Why is that so important?" Notice that one key element of these questions is that they request the
speaker to elaborate on information already given. Despite their apparent benefits, not all questions are equally helpful. Whereas sincere questions are equally helpf
winded: speaking for a long time to stand up to: to confront courageously shot down: rejected or defeated - Questions that make statements. "You lent money to Tony?" We lent money to Tony?" We lent money to Tony?" We statements a guestion into a statement of the courage of th
also use questions to offer advice. The person who responds with, "Are you going to stand up to him and give him what he deserves?" clearly has stated an opinion about what should be done. Questions that carry hidden agendas. "Are you busy Friday night?" is a dangerous question to answer. If you say, "No," thinking the person has something fun in
mind, you won't like hearing, "Good, because I need some help moving my piano." Questions that seek "correct" answers. Most of us have been victims of question—unless the asker has a predetermined preference. When this
happens, the asker isn't interested in listening to contrary opinions, and "incorrect" responses get shot down. Some of these questions may venture into delicate territory. "Honey, do you think I look ugly?" can be a request for a "correct" answer. 114-151 Ch04 Adler 2/28/05 9:42 AM Page 131 CHAPTER 4 Ouestions that are based on unchecked
assumptions. "Why aren't you listening to me?" assumes the other person isn't paying attention. "What's the matter?" assumes that something is wrong. As Chapter 2 explains, perception checking out assumptions: "When you kept looking over at the TV, I thought you weren't listening to me, but maybe I was wrong.
Were you paying attention?" Unlike counterfeit questions, sincere questions are genuine requests for new information that clarifies a speaker's thoughts or feelings. Although the value of sincere questioning might seem obvious, people don't use this information-seeking approach enough. Communicators are often reluctant to show their ignorance by
asking for explanation of what seems like it should be an obvious point. At times like this it's a good idea to recall a quote attributed to Confucius: "He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask is a fool for five minutes. He who does not ask i
Questioning is often a valuable tool for increasing understanding. Sometimes, however, questions won't help you understand a speaker's ideas any more clearly. As the humorous drawing on this page shows, questions can even lead to greater misunderstandings. Now consider another type of feedback—one that would tell you whether you understanding.
what had already been said before you asked additional questions. This sort of feedback, termed paraphrasing, involves restating in your own words the message you thought the speaker had just sent, without adding anything new. (To a direction-giver) "You're telling me to drive down to the traffic light by the high school and turn toward the
mountains, is that it?" "It is a cocker spaniel." "It is a cocker spaniel." "It is full-grown." "Grown up or a puppy?" "What color is it?" (To the boss) "So you need me both this Saturday—right?" (To a professor) "When you said, 'Don't worry about the low grade on the guiz, 'did you mean it won't count against my grade?" In other cases, a paraphrase will reflect
your understanding of the speaker's feelings: "You said you understand, but you look confused. Are you?" "It is black and white." "You seem to be in a hurry. I get the idea you don't want to talk now. Is that right?" "You seem to be in a hurry. I get the idea you don't want to talk now. Is that right?" "You seem to be in a hurry. I get the idea you don't want to talk now. Is that right?" "You seem to be in a hurry. I get the idea you don't want to talk now. Is that right?" "You seem to be in a hurry. I get the idea you don't want to talk now. Is that right?" "You seem to be in a hurry. I get the idea you don't want to talk now. Is that right?" "You seem to be in a hurry. I get the idea you don't want to talk now. Is that right?" "You seem to be in a hurry. I get the idea you don't want to talk now. Is that right?" "You seem to be in a hurry. I get the idea you don't want to talk now. Is that right?" "You seem to be in a hurry. I get the idea you don't want to talk now. Is that right?" "You seem to be in a hurry. I get the idea you don't want to talk now. Is that right?" "You seem to be in a hurry. I get the idea you don't want to talk now. Is that right?" "You seem to be in a hurry. I get the idea you don't want to talk now. Is that right?" "You seem to be in a hurry. I get the idea you don't want to talk now. Is that right?" "You seem to be in a hurry. I get the idea you don't want to talk now. I get the idea you don't want to talk now. I get the idea you don't want to talk now. I get the idea you don't want to talk now. I get the idea you don't want to talk now. I get the idea you don't want to talk now. I get the idea you don't want to talk now. I get the idea you don't want to talk now. I get the idea you don't want to talk now. I get the idea you don't want to talk now. I get the idea you don't want to talk now. I get the idea you don't want to talk now. whether it focuses on a specific comment or a general theme, the key to success is to restate the other person's comments in your own words as a way of cross-checking the information. If you say you had a full-grown, black and white cocker spaniel as a pet in the first
place?" Asking Questions Doesn't Guarantee Understanding 114-151 Ch04 Adler 132 2/28/05 PART ONE 9:42 AM Page 132 ELEMENTS OF COMMUNICATION CULTURAL IDIOM parroting: repeating without understanding bleeding-heart liberals: persons motivated by sympathy rather than practicality boosts the odds: increases the chances of
success sound foolish—and you still might well be misunderstanding what has been said. Notice the difference between simply parroting: "You'd like to go, but you can't afford it." Paraphrasing: "So if we could find a way to pay for you, you'd be willing to
come. Is that right?" Speaker: "Gawd, do you look awful!" Parroting: "You think I look terrible." Paraphrasing is a skill that takes time to develop. You can make your paraphrasing sound more natural by taking any of three approaches, depending on the
situation: 1. Change the speaker's wording. Speaker: "Bilingual education is just another failed idea of bleeding-heart liberals." Paraphrase: "Let me see if I've got this right. You're mad because you think bilingual education is just another failed idea of bleeding-heart liberals." Paraphrase: "Let me see if I've got this right. You're mad because you think bilingual education is just another failed idea of bleeding-heart liberals." Paraphrase: "Let me see if I've got this right. You're mad because you think bilingual education is just another failed idea of bleeding-heart liberals." Paraphrase: "Let me see if I've got this right. You're mad because you think bilingual education is just another failed idea of bleeding-heart liberals." Paraphrase: "Let me see if I've got this right. You're mad because you think bilingual education is just another failed idea of bleeding-heart liberals." Paraphrase: "Let me see if I've got this right. You're mad because you think bilingual education is just another failed idea of bleeding-heart liberals." Paraphrase: "Let me see if I've got this right. You're mad because you think bilingual education is just another failed idea of bleeding-heart liberals." Paraphrase: "Let me see if I've got this right. You're mad because you think bilingual education is just another failed idea of bleeding-heart liberals." Paraphrase is the paraphrase is the
speaker is talking about. When the speaker makes an abstract statement, you may suggest a specific example or two to see if your understanding is accurate. Speaker: "Lee is such a jerk. I can't believe the way he acted last night." Paraphrase: "You think those jokes were pretty offensive, huh?" (Reflects the listener's guess about speaker's reason for
objecting to the behavior.) 3. Reflect the underlying theme of the speaker's remarks. When you want to summarize the theme that seems to have run through another person's conversation, a complete or partial perception check is appropriate: Paraphrase: "You keep reminding me to be careful. Sounds like you're worried that something might
happen to me. Am I right?" (Reflects both the speaker's thoughts and feelings and explicitly seeks clarification.) Learning to paraphrase isn't easy, but it can be worth the effort, because it offers two very real advantages. First, it boosts the odds that you'll accurately and Source: CALVIN and HOBBES © 1995 Watterson. Reprinted with permission of

reason, some communication experts suggest that the ratio of questioning and paraphrasing to confronting should be at least 5:1, if not more.29 Take Notes Understanding others is crucial, of course, but comprehending their ideas doesn't guarantee that you will remember them. As you read earlier in this chapter, listeners usually forget almost two-
thirds of what they hear. Sometimes recall isn't especially important. You don't need to retain many details—is important. The lectures you hear in class are an obvious example. Likewise, it was a relative. At other times, though, remembering a message—even minute details—is important. The lectures you hear in class are an obvious example. Likewise, it was a relative. At other times, though, remembering a message—even minute details—is important. The lectures you hear in class are an obvious example. Likewise, it was a relative. At other times, though, remembering a message—even minute details—is important. The lectures you hear in class are an obvious example. Likewise, it was a relative and the remaining a message—even minute details—is important. The lectures you hear in class are an obvious example. Likewise, it was a relative and the remaining a message—even minute details of the vacation adventures recounted by a neighbor or the childhood stories are an obvious example. Likewise, it was a relative and the remaining a message—even minute details—is important. The lectures you hear in class are an obvious example. Likewise, it was a relative and the remaining a message—even minute details of the vacation and the remaining a message—even minute details of the vacation and the remaining a message and the remaining a messag
can be important to remember the details of plans that involve you: the time of a phone caller whose message you took for someone else, or the orders given by your boss at work. At times like these it's smart to take notes instead of relying on your memory. Sometimes these notes may be simple and brief:a phone
number jotted on a scrap of paper or a list of things to pick up at the market. In other cases—a lecture, for example—your notes need to be much longer. When detailed notes are necessary, a few simple points will help make them effective: 1. Don't wait too long before beginning to jot down ideas. If you don't realize that you need to take notes until
five minutes into a conversation, you're likely to forget much of what has been said and miss out on other information as you scramble to catch up. CULTURAL IDIOM scramble to catch up. to begin in a hurried fashion that which should have been started sooner. 114-151_Ch04_Adler 134 2/28/05 PART ONE 9:42 AM Page 134 ELEMENTS OF
COMMUNICATION FINDING COMMON GROUND THROUGH LISTENING The reports from the front lines of the abortion wars are as dispiriting as ever. Hostilities have only escalated and opponents have now become enemies. But in a vine-covered building behind a wooden fence in suburban Boston, a small group of family therapists is trying to
establish a demilitarized zone. The Public Conversations Project they have created is on a leading edge of the nascent movement struggling to defuse the civil wars. Their project grew out of a question that director Laura Chasin asked herself and her colleagues in 1990: "Do we as family therapists have skills that can be helpfully applied 'out there'?"
Over the past year and a half, they invited groups of people to join a different sort of conversation. Some of their names were provided by Planned Parenthood and Massachusetts Citizens for Life; all identified themselves as pro-choice or pro-life. Under the ground rules, people were not allowed to try to persuade each other. Instead, over three hours
and under the guidance of a project member, they talked and listened. They explored stereotypes of each other, acknowledged ambivalence and watched what emerged from this process. Some questions indeed led down hopeless, dead ends. When does life begin? Is the fetus a person? Who should decide? But of the fifty people who went through the
process, only two were totally unable to find new ways of talking. "The main thing that happened was the way these people are compassionate, principled and share concerns that I have." Indeed at momentum thing that happened was the way these people are compassionate, principled and share concerns that I have." Indeed at momentum thing that happened was the way these people are compassionate, principled and share concerns that I have." Indeed at momentum thing that happened was the way these people are compassionate, principled and share concerns that I have." Indeed at momentum thing that happened was the way these people are compassionate, principled and share concerns that I have." Indeed at momentum thing that happened was the way these people are compassionate, principled and share concerns that I have." Indeed at momentum thing that happened was the way these people are compassionate, principled and share concerns that I have." Indeed at momentum thing that happened was the way these people are compassionate, principled and share concerns that I have." Indeed at momentum thing that happened was the way the same that the way the same that it is not a sum of the people are compassionated at momentum that it is not a sum of the people are compassionated at the people at the people at the people at
in the videotaped conversations, it is impossible to know the opponents without a label. Which side said, for example, "How do we get people were in such pitched battles," said another project member, "they didn't
have a clue what they had in common." But gradually they uncovered a shared concern about the importance of preventing unintended pregnancy and about the need for sex education. Chasin and her
colleagues harbor no grand illusions that this process will forge A Great Compromise on abortion—take your placards and go home. But, once a pattern has been "busted," once people are no longer defined as demons, they hope that the public, like the family, may be able to come up with some solutions. Indeed, there are hints of this success in other
parts of this movement. In Missouri, Wisconsin, Texas and California, pro-life and pro-choice people are meeting and talking—carefully. Ellen Goodman 2. Record only key ideas. Don't try to capture every word of long messages. If you can pin down the most important points, your notes will be easier to follow and much more useful. 3. Develop a note
taking format. The exact form you choose isn't important. Some people use a formal outlining scheme with headings designated by Roman numbers or asterisks next to especially important information. After you
develop a consistent format, your notes will not only help you remember information, but also help you whip others' ideas into a shape that's useful to you. CULTURAL IDIOM pin down: identify specifically whip into shape: organize quickly CRITICAL LISTENING Whereas the goal of informational listening is to understand a speaker, the goal of critical
listening (also called "evaluative listening") is to judge the quality of a 114-151_Ch04_Adler 2/28/05 9:42 AM Page 135 CHAPTER 4 LISTENING 135 message in order to decide whether to accept or reject it. At first the words critical and evaluative may put you off, because both words carry the negative connotations of carping and fault finding. But
critical listeners needn't be hostile. Critical listening—at least in the sense we're discussing here—involves evaluating an idea to test its merit. In this sense, we could say that noncritical listening—at least in the sense we're discussing here—involves evaluating an idea to test its merit. In this sense, we could say that noncritical listening—at least in the sense we're discussing here—involves evaluating an idea to test its merit. In this sense, we could say that noncritical listening—at least in the sense we're discussing here—involves evaluating an idea to test its merit.
way, or to accept a belief—to cite a few examples. You will be most effective as a critical listener if you follow several guidelines: Listen for Information Before Evaluating The principle of listening for information before evaluating The principle of listening for information before evaluating seems almost too obvious to mention, yet all of us are guilty of judging a speaker's ideas before we completely understance.
them. The tendency to make premature judgments is especially strong when the idea you are hearing conflicts with your own beliefs. You can avoid the tendency to judge before understanding by following the simple rule of paraphrasing a speaker's ideas before responding to them. The effort required to translate the other person's ideas into your own
 words will keep you from arguing, and if your interpretation is mistaken, you'll know immediately. Evaluate the Speaker's Credibility The acceptability of an idea often depends on its source. If your longtime family friend, the self-made millionaire, invited you to invest your life savings in jojoba fruit futures, you might be grateful for the tip. If your
deadbeat brother-in-law made the same offer, you would probably laugh off the suggestion. Chapter 14 discusses credibility in detail, but two questions provide a quick guideline for deciding whether or not to accept a speaker as an authority: 1. Is the speaker competent? Does the speaker have the experience or the expertise to qualify as an authority
on this subject? Note that someone who is knowledgeable in one area may not be as well qualified to comment in another area. For instance, your friend who can answer any question about computer programming might be a terrible advisor when the subject turns to romance. 2. Is the speaker impartial? Knowledge alone isn't enough to certify a
speaker's ideas as acceptable. People who have a personal stake in the outcome of a topic are more likely to be biased. The unqualified praise a commissionearning salesperson gives a product may be more suspect than the mixed review you get from a user. This doesn't mean you should disregard any comments you hear from an involved party—only
that you should consider the possibility of intentional or unintentional bias. Examine the Speaker's Evidence and Reasoning Speakers usually offer some kind of support to back up their statements. A car dealer who argues that domestic cars are just as reliable as imports might cite frequency-of-repair statistics from Consumer Reports or refer you to
satisfied cus- CULTURAL IDIOM put you off: cause one displeasure deadbeat: one who does not regularly pay bills laugh off: dismiss with a laugh 114-151_Ch04_Adler 136_2/28/05_PART_ONE_9:42_AM_Page_136_ELEMENTS_OF_COMMUNICATION tomers, for example; and a professor arguing that students don't work as hard as they used to might tell
stories about then and now to back up the thesis. Chapter 11 describes several types of supporting material that can be used to prove a point:definitions, descriptions, analogies, statistics, and so on. Whatever form the support takes, you can ask several questions to determine the quality of a speaker's evidence and reasoning:30 1. Is the evidence recent
enough? In many cases, ranging from trivial to important,old evidence is worthless. If the honors were earned several years ago, the cuisine from an "award-winning" restaurant may be barely edible today. The claim "Tony is a jerk" may have been true in the past, but people do change. Before you accept even the most credible evidence, be sure it isn't
obsolete. 2. Is enough evidence presented? One or two pieces of support may be exceptions and not conclusive evidence. You might have heard this example of generalizing from limited evidence. I knew somebody who wasn't wearing them in an accident, and his life was saved because he was thrown clear from the car.'
Although not wearing seat belts might have been safer in this instance, on the average, experts agree when you consider all vehicle accidents, the chances of avoiding serious injury are much greater if you wear seat belts. 3. Is the evidence from a reliable source? Even a large amount of recent evidence may be worthless if the source is weak. Your
cousin, the health-food fanatic, might not have the qualifications to talk about the poisonous effects of commercially farmed vegetables. On the other hand, the opinion of an impartial physician, nutritionist, or toxologist would carry more weight. 4. Can the evidence be interpreted in more than one way? A piece of evidence that supports one claim
might also support others. For example, you might hear someone argue that statistics showing women are underrepresented in the management of a company long enough to
be promoted, or perhaps this is a field that has not attracted large numbers of women. Alternative explanations don't necessarily mean that the one being argued is wrong, but they do raise questions that need to be answered before you accept an argument. Besides taking a close look at the evidence a speaker presents, a critical listener will also look
at how that evidence is put together to prove a point.Logicians have identified over one hundred fallacies—errors in reasoning that can lead to false conclusions. Logicians have identified over one hundred fallacies—errors in reasoning that can lead to false conclusions. Examine Emotional Appeals Sometimes emotion alone may be enough reason
to persuade you. You might lend your friend $20 just for old time's sake even though you don't expect to see the money again soon. In other cases, it's a mistake to let yourself be swayed by emotion when the logic of a point isn't sound. The excitement or fun in an ad or the lure of low monthly payments probably aren't good enough reasons to buy a
product you can't afford. Again, the fallacies described in Chapter 14 will help you recognize flaws in emotional appeals. 114-151 Ch04 Adler 2/28/05 9:42 AM Page 137 CHAPTER 4 CRITICAL THINKING PROBE UNDERSTANDING AND EVALUATING LISTENING 137 Think of three recent incidents when trying to understand the other person would
have been the most appropriate listening style. Then think of three different situations when an evaluative approach would have been the most appropriate way to listen. Based on your conclusions (and perhaps those of your classmates), develop a set of guidelines describing when it's best to listen purely for information, suspending judgment and
attempting to uncritically understand another person's point of view. Next, describe the circumstances when it is more appropriate to listen evaluatively. EMPATHIC LISTENING We listen both informationally and critically out of self-interest. In empathic listening, however, the goal is to build a relationship or help the speaker solve a problem.32
Empathic listening is the approach to use when others seek help for personal dilemmas. Sometimes the problem is a big one:"I don't know whether to split up or stay with him." At other times the problem is a big one: "I don't know whether to split up or stay with him." At other times the problem is a big one: "I don't know whether to split up or stay with him." At other times the problem is more modest. A friend might be trying to decide what birthday gift to buy or whether to split up or stay with him." At other times the problem is more modest. A friend might be trying to decide what birthday gift to buy or whether to split up or stay with him." At other times the problem is a big one: "I don't know whether to split up or stay with him." At other times the problem is a big one: "I don't know whether to split up or stay with him." At other times the problem is a big one: "I don't know whether to split up or stay with him." At other times the problem is a big one: "I don't know whether to split up or stay with him." At other times the problem is a big one: "I don't know whether to split up or stay with him." At other times the problem is a big one: "I don't know whether to split up or stay with him." At other times the problem is a big one: "I don't know whether to split up or stay with him." At other times the problem is a big one: "I don't know whether to split up or stay with him." At other times the problem is a big one: "I don't know whether to split up or stay with him." At other times the problem is a big one: "I don't know whether to split up or stay with him." At other times the problem is a big one: "I don't know whether to split up or stay with him." At other times the problem is a big one: "I don't know whether to split up or stay with him." At other times the problem is a big one: "I don't know whether to split up or stay with him." At other times the problem is a big one. The problem is a big one
to take when you simply want to become better acquainted with others and building a relationship aren't mutually exclusive. Empathic listening can accomplish both of them, because when listening helps another person, the relationship between speaker
and listener improves. 33 For example, couples who communicate in ways that show they understanding. The opposite is also true: In marriages where husbands do not give emotional responses to their wives, the stress level grows.
Whatever the relationship and topic, there are several styles by which you can respond empathically to another person's remarks.34 Each of these styles has its advantages and disadvantages and disadvantages and disadvantages. As you read them, you can aim toward choosing the best style for the situation at hand. Source: © Zits Partnership. Features Syndicate. CULTURAL IDIOM to split up: to separate from one another in a relationship 114-151 Ch04 Adler 138 2/28/05 PART ONE 9:42 AM Page 138 ELEMENTS OF COMMUNICATION Advising CULTURAL IDIOM pin the blame on: claim the fault lies with respecting the face needs: protecting one's dignity face-saving: protecting one's
dignity When approached with another's problem, the most common tendency is an advising response: to help by offering a solution.35 Although such a response is sometimes valuable, often as it is helpful as you might think.36 In fact, researchers have discovered that advice is actually unhelpful at least as often as it is helpful.37 There are several
reasons why advice doesn't work especially well. First, it can be hard to tell when the other person wants to hear the helper's idea of a solution. 38 Sometimes the requests for direct advice. Ambiguous statements include requests for
opinions ("What do you think of Jeff?"), soliciting information ("Would that be an example of sexual harassment?"), and announcement of a problem ("I'm really confused . . ."). Even when someone with a problem asks for advice, offering it may not be helpful. Your suggestion may not offer the best course to follow, in which case it can even be
harmful. There's often a temptation to tell others how we would behave in their place, but it's important to realize that what's right for one person may not be right for another. A related consequence of advising is that it often allows others to avoid responsibility for their decisions. A partner who follows a suggestion of yours that doesn't work out can
always pin the blame on you. Finally, often people simply don't want advice: They may not be ready to accept it, needing instead simply to talk out their thoughts and feelings. Advice is most welcome under two conditions: when it has been requested and when the advisor seems concerned with respecting the face needs of the recipient. 39 Before
offering advice, you need to be sure that four conditions are present: 1. Be confident that the advice is correct. You may be certain about some matters of fact, such as the proper way to solve a school problem or the cost of a piece of merchandise, but resist the temptation to act like an authority on matters you know little about. Furthermore, it is both
unfair and risky to make suggestions when you aren't positive that they are the best choice. Realize that just because a course of action worked for you doesn't guarantee that it will work for everybody. 2. Ask yourself whether the person seeking your advice seems willing to accept it. In this way you can avoid the frustration of making good
suggestions, only to find that the person with the problem had another solution in mind all the time. 3. Be certain that the receiver won't blame you if the advice doesn't work out. You may be offering the suggestions, but the choice and responsibility for accepting them are up to the receiver won't blame you if the advice supportively, in a
face-saving manner. Advice that is perceived as being offered constructively, in the context of a solid relationship, is much better than critical comments offered in a way that signals a lack of respect for the receiver.40 Many receive advice, few profit by it. Publilius Syrus Judging A judging response evaluates the sender's thoughts or behaviors in
some way. The judgment may be favorable—"That's a good idea" or "You're on the right track 114-151_Ch04 Adler 2/28/05 9:42 AM Page 139 CHAPTER 4 now"—or unfavorable—"An attitude like that won't get you anywhere." But in either case it implies that the person doing the judging is in some way qualified to pass judgment on the speaker's
thoughts or behaviors. Sometimes negative judgments are purely critical. How many times have you heard such responses as "Well, you asked for it!" or "I told you so!" or "You're just feeling sorry for yourself"? Although comments like these can sometimes serve as a verbal slap that brings problem-holders to their senses, they usually make matters
worse. At other times negative judgments are less critical. These involve what we usually call constructive criticism, which is intended to help the problemholder improve in the future. This is the sort of response given by friends about everything from the choice of clothing to jobs to friends. Another common setting for constructive criticism occurs in
 school, where instructors evaluate students' work to help them master concepts and skills. But whether it's justified or not, even constructive criticism runs the risk of arousing defensiveness because it may threaten the self-concept of the person at whom it is directed. Judgments have the best chance of being received when two conditions exist: 1
The person with the problem should have requested an evaluation from you. Occasionally an unsolicited judgment is genuinely constructive and not designed as a put-down. If you are tempted to use judgments as
a weapon, don't fool yourself into thinking that you are being helpful. Often the statement "I'm telling you this for your own good" simply isn't true. If you can remember to follow these two guidelines, your judgments will probably be less frequent and better received. Analyzing In an analyzing statement, the listener offers an interpretation of a
speaker's message. Analyses like these are probably familiar to you: Think what's really bothering you is . . ." "Interpretations are often effective ways to help people with problems to consider alternative meanings—meanings they
 would have never thought of without your help. Sometimes a clear analysis will make a confusing problem suddenly clear, either suggesting a solution or at least providing an understanding of what is occurring. At other times, an analysis can create more problems than it solves. There are two problems with analyzing. First, your interpretation may not
be correct, in which case the speaker may become even more confused by accepting it. Second, even if your interpretation is correct, telling it to the problem-holder might not be useful. There's a chance that it will arouse defensiveness (because analysis implies superiority and even if it doesn't, the person may not be able to
understand your view of the problem without working it out personally. LISTENING 139 CULTURAL IDIOM bring someone to his or her senses: cause someone to his or her senses: cause someone to think more rationally a put-down: an insult, degrading remark 114-151_Ch04_Adler 140 2/28/05 PART ONE 9:42 AM Page 140 ELEMENTS OF COMMUNICATION UNDERSTANDING
COMMUNICATION TECHNOLOGY SOCIAL SUPPORT ON THE INTERNET Until recently most social support came from personal acquaintances: friends, family, co-workers, neighbors, and so on. In the last fifteen years, though, there has been an explosion of "virtual communities" in which strangers meet online to share interests and concerns, and
to gain support from one another on virtually every problem. The most popular support topics include medical conditions, eating disorders, sexual orientation, divorce, shyness, addictions, and loneliness. In some aspects, online help is similar to the face-to-face variety. The goals are to gain information, emotional support, and a sense of being valued
and cared for. In other ways, online support differs from the kind people seek in person. The most obvious difference is that most members of online groups often focus specifically on a single issue, while traditional
relationships cover a wide range of topics. Another difference involves the rate and amount of selfdisclosure: In traditional relationships, people usually reveal personal information slowly and carefully; but the anonymity of online support groups will ever replace face-
to-face relationships; but for hundreds of thousands of people, they provide another valuable tool for getting the help they often desperately need. For a summary of research on online support," in C. A. Lin and D. Atkin, eds., Communication Technology.
and Society: Audience Adoption and Uses (Cresskill, NJ: Hampton Press, 2002). How can you know when it's helpful to offer an analysis? There are several guidelines to follow: 1. Offer your interpretation in a tentative way rather than as absolute fact. There's a big difference between saying, "Maybe the reason is . . ." or "The way it looks to me .
and insisting, "This is the truth." 2. Your analysis ought to have a reasonable chance of being correct. An inaccurate interpretation—especially one that sounds plausible—can leave a person more confused than before. 3. You ought to be sure that the other person will be receptive to your analysis. Even if you're completely accurate, your thoughts
won't help if the problem-holder isn't ready to consider them. 4. Be sure that your motive for offering an analysis to show how brilliant you are or even to make the other person feel bad for not having thought of the right answer in the first place. Needless to say, an analysis
offered under such conditions isn't helpful. Questioning A few pages ago we talked about questioning as one way to understand them more clearly.41 For example, questioning can help a problem-holder define vague ideas more precisely
You might respond to a friend with a line of questioning: "You said Greg has been acting 'differently' toward you lately. What has he been doing?" Another example of a question that helps clarify is as follows: "You told your roommates that you wanted them to be more helpful in keeping the place clean. What would you like them to do?" 114-
151_Ch04_Adler 2/28/05 9:42 AM Page 141 CHAPTER 4 LISTENING 141 UNDERSTANDING DIVERSITY GENDER AND SOCIAL SUPPORT Researchers have found some important ways that men and women respond differently to others' problems. As a group, women are more likely than men to give supportive responses when presented with
another person's problem. They are also more skillful at composing supportive messages. By contrast, men tend to respond to others' problems by offering advice, or by diverting the topic. In a study of helping styles in sororities and fraternities, researchers found that sorority women frequently respond with emotional support when asked to help;
also, they rated their sisters as being better at listening nonjudgmentally, and on comforting and showing concern for them. Fraternity men, on the other hand, fit the stereotypical pattern of offering help by challenging their brothers to evaluate their attitudes and values. These differences are real, but they aren't as dramatic as they might seem. For
including cultural background, personal goals, expressive style, and cognitive complexity. Based on these findings, it's important to respond in a way that fits with your personal style and is likely to be appreciated by the other person. For a comprehensive discussion of sex similarities and differences in social support, see the Winter 2002 issue of
Communication Reports, which contains several research studies on this subject. For a summary of findings, see B. R. Burleson's review in this issue: "Psychological Mediators of Sex Differences in Emotional Support: A Reflection on the Mosaic," Communication Reports 15 (Winter 2002): 71-79. Questions can also encourage a problem-holder to
examine a situation in more detail by talking either about what happened or about personal feelings, for example, "How did you do then?" This type of questioning is particularly helpful when very
much. Although questions have the potential to be helpful, they also run the risk of confusing or distracting the person with the problem. The best questions just to satisfy your own curiosity. You might become so interested in the other person's story that you will want to hear more. "What did he say
then?" you might be tempted to ask. "What happened next?" Responding to questions like these might confuse the person with the problem, or even leave him or her more agitated than before. 2. Be sure your questions won't confuse the person you're trying to help. For instance, asking someone, "When did the problem begin?" might provide

have no right to question God," "God must love you to have selected you for this burden") is wrong as well. Harold S. Kushner When Bad Things Happen to Good People CULTURAL IDIOM turned you down: rejected your request or offer 114-151_Ch04_Adler 142 2/28/05 PART ONE 9:42 AM Page 142 ELEMENTS OF COMMUNICATION Supporting A
 question about the value of receiving support when faced with personal problems. "Comforting ability" and social support have been shown to be among the most important communication skills a friend—or a teacher or a parent—can have. 42 In other instances, this kind of comment isn't helpful at all; in fact, it can even make things worse. Telling a
 person who is obviously upset that everything is all right,or joking about a serious matter,can trivialize the problem. People might see your comments as a put-down, leaving them feeling worse than before. As with the other styles we'll discuss, supporting is an
 appropriate response, follow these guidelines: 1. Make sure your expression of support is sincere. Phony agreement or encouragement is probably worse than no support at all, because it adds the insult of your dishonesty to whatever pain the other person is already feeling. 2. Be sure the other person can accept your support. Sometimes we become
so upset that we aren't ready or able to hear anything positive. Even if your advice, judgments, and analysis are correct and your questions are sincere, and even if your support comes from the best motives, these responses often fail to help. One recent survey demonstrates how poorly such traditional responses work.44 Mourners who had recently
suf- 114-151_Ch04_Adler 2/28/05 9:42 AM Page 143 CHAPTER 4 fered from the death of a loved one reported that 80 percent of the statements were advice: "You've got to get out more." "Don't question God's will." Despite their frequency, these responses were helpful only 3 percent
attacks on the United States how simply being present can be more helpful than trying to reassure grief-stricken family members who had lost loved ones in the tragedy: Listen. Don't say anything. Saying "it'll be okay," or "I know how you feel" can backfire. Right now that's not what a victim wants to hear. They want to know people are there and
care about them. Be there, be present, listen. The clergy refer to it as a "ministry of presence." You don't need to do anything, just be there or have them know you're available. 45 Prompting Advising, judging, analyzing, questioning, and supporting are all active approaches to helping that call for a great deal of input from the respondent. Another
interested buyer. It's a great deal. But buying it would wipe out my savings. At the rate I spend money, it would take me a year to save up this much again. Tim: Uh huh. Pablo: I wouldn't be able to take that ski trip over winter break ... but I sure could save time with my schoolwork . . . and do a better job, too. Tim: That's for sure. Pablo: Do you think
should buy it? Tim: I don't know.What do you think? Pablo: I just can't decide. Tim: (silence) Pablo: I'm going to do it. I'll never get a deal like this your presence can act like a catalyst to help others find their own answers. Prompting will work best

Therefore, if you would understand him, listen not to what he says but rather to what he says but rat
between two friends shows how reflecting can offer support and help a person find the answer to her own problem: Jill: I'm starting to think maybe he has this thing about women—or maybe it's just about me. Mark: You mean he's
coming on to you? (Mark paraphrases what he thinks Jill has said.) Jill: Oh no,not at all! But it seems like he doesn't take women—or at least me— seriously. (Jill corrects Mark's misunderstanding and explains herself.) Mark: What do you mean? (Mark asks another simple question to get more information.) Jill: Well, whenever we're in a meeting or
just talking around the office and he asks for ideas, he always seems to pick men. He gives orders to women—men, too—but he never asks the women to say what they think. Mark: So you think maybe he doesn't take women seriously, is that it? (Mark paraphrases Jill's last statement.) Jill: Yeah. Well, he sure doesn't seem interested in their ideas. But
that doesn't mean he's a total woman-hater or a male chauvinist pig. I know he counts on some women in the office. Our accountant Teresa has been there forever, and he's always saying he couldn't live without her. And when Brenda got the new computer system up and running last month, I know he appreciated that. He gave her a day off and told
everybody how she saved our lives. Mark: Now you sound confused. (Reflects her apparent feeling.) Jill: I am confused. I don't think it's just my imagination. I mean I'm a good producer, but he has never—not once—asked me for my ideas about how to improve sales or anything. And I can't remember a time when he's asked any other women. But
maybe I'm overreacting. Mark: You're not positive whether you're right, but I can tell that this has you concerned. (Mark paraphrases both Jill's central theme and her feeling.) Jill: Yes. But I don't know what to do about it. Mark: Maybe you should . . . (Starts to offer advice but catches himself and decides to ask a sincere question instead.) So what are
your choices? Jill: Well,I could just ask him if he's aware that he never asks women's opinions. But that might sound too aggressive and angry. I don't know whether I should be angry because he's not taking ideas seriously, or whether he just doesn't take my ideas
seriously, or whether it's nothing at all. Mark: So you're mostly confused. (Reflects Jill's apparent feeling again.) Jill: Yes! I don't know where I stand with my boss, and not being sure is starting to get to me.I what if it's
nothing? Then I'll look insecure. Mark: (Mark thinks Jill should confront her boss, but he isn't positive that this is the best approach, so he paraphrases what Jill seems to be saying.) And that would make you look bad. 114-151 Ch04 Adler 2/28/05 9:42 AM Page 145 CHAPTER 4 Jill: I'm afraid maybe it would. I wonder if I could talk it over with anybody
else in the office and get their ideas . . . . Mark: . . . . see what they think . . . . Jill: Yeah. Maybe I could ask Brenda. She's easy to talk to, and I do respect her judgment. Maybe she could give me some ideas about how to handle this. Mark: Sounds like you're comfortable with talking to Brenda first. Jill: (Warming to the idea.) Yes! Then if it's nothing, I can
calm down. But if I do need to talk to the boss, I'll know I'm doing the right thing. Mark: Great. Let me know how it goes. Reflecting a speaker's ideas and feelings in this way can be surprisingly helpful.46 First, paraphrasing helps the problem. In the dialogue you just read, Mark's paraphrasing helps the problem. In the dialogue you just read, Mark's paraphrasing helps the problem. In the dialogue you just read, Mark's paraphrasing helps the problem.
real source of her concern: what her boss thinks of her, not whether he doesn't take women seriously. The clarity that comes from this sort of perspective can make it possible to find solutions that weren't apparent before. Paraphrasing is also helpful because it helps the problem-holder to unload more of the concerns he or she has been carrying
around, often leading to the relief that comes from catharsis. Finally, listeners who reflect the speaker's thoughts and feelings (instead of judging or analyzing, for example) show their involvement and concern. Paraphrasing can be helpful, but it is no panacea. A study by noted researcher John Gottman revealed that "active listening" (a term sometimes and feelings (instead of judging or analyzing, for example) show their involvement and concern.
used to describe paraphrasing) by itself was not a trait that distinguished happily married couples from troubled ones. 47 Because empathy is the ingredient that makes paraphrasing thoughts and feelings helpful, it is a mistake to think of reflective listening as a technique that you can use mechanically. Carl Rogers, the psychologist generally
considered the foremost advocate of active listening, made the case against mechanical paraphrasing strongly: "I am not trying to determine whether I am seeing it as he or she is experiencing it at this moment." 48 In other words, reflecting is not an end
in itself; rather, it is one way to help others by understanding them better. There are several factors to consider before you decide to paraphrase: 1. Is the problem complex enough? Sometimes people are simply looking for information and not trying to work out their feelings. At times like this, paraphrasing would be out of place. If someone asks you
for the time of day, you'd do better simply to give her the information than to respond by saying, "You want to know what time it is." If you're fixing dinner, and someone wants to know when it will be eating." 2. Do you have the necessary time and concern? The kind
of paraphrasing we've been discussing here takes a good deal of time. Therefore, if you're in a hurry to do something besides listen, it's wise to avoid starting a conversation you won't be able to finish. Even more important than time is concern. It's not necessarily wrong to be too preoccupied to help or even to be unwilling to exert the considerable
effort that active listening requires: You can't help everyone with every problem. It's far better to state honestly that you're unable or unwilling to help than to pretend to care when you really don't. 3. Are you genuinely interested in helping the other person? Sometimes as you listen to others, it's easy to relate their thoughts to your own life or to seek
LISTENING 145 114-151 Ch04 Adler 146 2/28/05 PART ONE 9:42 AM Page 146 ELEMENTS OF COMMUNICATION more information just to satisfy your own curiosity. Remember that paraphrasing is a form of helping someone else. The general obligation to reciprocate the other person's self-disclosure with information of your own isn't necessary
when the goal is to solve a problem. Research shows that speakers who reveal highly intimate personal information don't expect, or even appreciate, the same kind of disclosure from a conversational partner. 49 Rather, the most competent and socially attractive response is one that sticks to the same topic but is lower in intimacy. In other words,
when we are opening up to others, we don't appreciate their pulling a conversational take-away such as "You're worried? So am I! Let me tell you about how I feel . . ." 4. Can you withhold judgment? You've already seen that paraphrase and their pulling a conversational take-away such as "You're worried? So am I! Let me tell you about how I feel . . ." 4. Can you withhold judgment? You've already seen that paraphrase and their pulling a conversational take-away such as "You're worried? So am I! Let me tell you about how I feel . . ." 4. Can you withhold judgment? You're worried? So am I! Let me tell you about how I feel . . ." 4. Can you withhold judgment? You're worried? So am I! Let me tell you about how I feel . . ." 4. Can you withhold judgment? You're worried? So am I! Let me tell you about how I feel . . . ." 4. Can you withhold judgment? You're worried? So am I! Let me tell you about how I feel . . . ." 4. Can you withhold judgment? You're worried? You'r
without injecting your own judgments. It's sometimes tempting to rephrase others'comments in a way that leads them toward the solution you think is best without ever clearly stating your intentions. As you will read in Chapter 7, this kind of strategy is likely to backfire by causing defensiveness if it's discovered. If you think the situation meets the
criteria for advice described earlier in this chapter, you should offer your suggestions openly. 5. Is your paraphrasing in proportion to others' problems, it can become artificial and annoying when it's overused. This is especially true if you suddenly begin to use it as
major response. Even if such responses are potentially helpful, this sudden switch in your behavior will be so out of character that others might find it distracting. A far better way to use paraphrasing is gradually to introduce it into your repertoire of helpfulness, so that you can become comfortable with it without appearing too awkward. Another way
to become more comfortable with this style is to start using it on real but relatively minor problems, so that you'll be more adept at knowing how and when to use it when a big crisis does occur. When and How to Help? Before committing yourself to helping another person—even someone in obvious distress—make sure your help is welcome. There are
many cases in which others prefer to keep their concerns to themselves. In these cases your efforts to get involved may not be useful and can even be harmful. In one survey, some people reported occasions when social support wasn't necessary, because they felt capable of handling the problem by themselves. 50 Many regarded uninvited help as an
intrusion, and some said it left them feeling more nervous than before. The majority of respondents expressed a preference for being in control of whether their distressing situation should be discussed with even the most helpful friend. When help is welcome, there is no single best way to provide it. Research shows that all styles can help others
 accept their situation, feel better, and have a sense of control over their problems.51 But there is enormous variability in which style will work with a given person.52 This fact explains why communicators who are able to use a wide variety of helping styles are usually more effective than those who rely on just one or two styles.53 114-
151_Ch04_Adler 2/28/05 9:42 AM Page 147 CHAPTER 4 LISTENING 147 You can boost the odds of choosing the best helping style in each situation by considering three factors. First, think about the situation and match your response to the nature of the problem. Sometimes people need your advice. At other times your encouragement and support
will be most helpful, and at still other times your analysis or judgment may be truly useful. And, as you have seen, there are times when your probes and paraphrasing can help others find their own answer. Second, besides considering the situation, you should also think about the other person when deciding which style to use. Some people are able to
helpers choose a style that fits the person. Third, think about yourself when deciding how to respond. Most of us reflexively use one or two helping styles. You may be best at listening quietly, offering a prompt from time to time. Or perhaps you are especially insightful and can offer a truly useful analysis of the problem. Of course, it's also possible to
rely on a response style that is unhelpful. You may be overly judgmental or too eager to advise, even when your strengths and weaknesses. SUMMARY Even the best message is useless if it goes unreceived or if it is misunderstood. For
this reason, listening—the process of giving meaning to an oral message—is a vitally important part of the communication process. We began our look at the subject by identifying and refuting several myths about listening. Our conclusion here was that effective listening is a skill that needs to be developed in order for us to be truly effective in
understanding others. We next took a close look at five steps in the process of listening, and remembering. We described some of the challenges that make effective listening so difficult. We described seven faulty listening behaviors and ten more reasons why people often listen poorly. You can become a
better listener by recognizing which of these faulty behaviors and reasons characterize your communication. This chapter also discussed several personal listening styles: content-oriented, and time-oriented, and time-oriented, and time-oriented, and time-oriented out that most people favor one of these styles, and that problems arise when different types
of listeners interact. All of these styles have both advantages and drawbacks, and effective listening is the proper approach to take when the goal is to understand another person's ideas. Information
can be best gained with an active approach to listening. This active approach can involve either questioning or paraphrasing—restating the speaker's message in your own words. Critical listening is appropriate when the goal is to judge the quality of an idea. A critical analysis will be most successful when the listening is appropriate when the goal is to judge the quality of an idea. A critical analysis will be most successful when the listening is appropriate when the goal is to judge the quality of an idea.
a message before passing judgment, when the speaker's credibility is taken into account, when the quality of supporting evidence is examined carefully. 114-151 Ch04 Adler 148 2/28/05 PART ONE 9:42 AM Page 148 ELEMENTS OF COMMUNICATION The aim of empathic listening is to
help the speaker, not the receiver. Various helping responses include advising, judging, analyzing, questioning, supporting, prompting, and paraphrasing the speaker's thoughts and feelings. Listeners can be most helpful when they use a variety of styles, focus on the emotional dimensions of a message, and avoid being too judgmental. KEY TERMS

use? 4. How could you adapt your listening styles to improve your communication effectiveness? 4. Informational listening Practice Effective informational listening styles to improve your skill in this important area and convince yourself of the difference good informational listening makes by following
these steps. 1. Find a partner with whom you have an important relationship. This may be a family member, lover, friend, fellow worker, or even an "enemy" with whom you interact frequently. 2. Invite your partner to explain his or her side of an issue that the two of you have difficulty discussing. Your job during this conversation is to understand your
partner. You should not even attempt to explain your position. (If you find the prospect of trying to understand the other person distressing, consider how this attitude might interfere with your ability to listen carefully.) 3. As your partner explains his or her point of view, use the skills outlined on pages 131-133 to help you understand. You can discover
 how well you are grasping your partner's position by occasionally paraphrasing what you think he or she is saying. If your partner verifies your partner confirms your understanding. 114-151_Ch04_Adler 2/28/05 9:42 AM Page 149
CHAPTER 4 4. After the conversation is over, ask your first understanding of the speaker's position change after you used paraphrasing? 

Did you find that the gap between your position and that of your partner are the speaker's position change after you used paraphrasing?

A comprehensive look at how leaders can apply the subtle yet important skill of listening to make a difference in their organizations. Feature Films For descriptions of
each film below and descriptions of other movies that illustrate listening and responding styles, see the CD-ROM that came with this book, and the Understanding Human Communication Web site at www.oup.com/us/uhc. Ineffective Listening Jerry Maguire (1996). Rated R. Jerry Maguire (Tom Cruise) is a high-powered pro sports agent who is so
focused on success that he doesn't have time to truly listen to any of his clients. In true Hollywood fashion, Jerry is redeemed by the love of a good woman (Renée Zellweger), a young boy (Jonathan Lipnicki), and good friends friends. In true Hollywood fashion, Jerry is redeemed by the love of a good woman (Renée Zellweger), a young boy (Jonathan Lipnicki), and good friends friends.
(Cuba Gooding, Jr., and Regina King). 114-151 Ch04 Adler 2/28/05 9:42 AM Page 151 CHAPTER 4 Supportive Listening Good Will Hunting (1997). Rated R. Will Hun
who can intuitively solve problems that have baffled some of the best minds in the world. Will turns down offers of jobs that take advantage of his gift, preferring a lifestyle that seems to point him toward jail, or worse. The film depicts the efforts of four people who try to head Will away from a life of selfdestruction: Will's best friend Chuckie (Ben
Affleck), his girlfriend Skylar (Minnie Driver), a MIT professor Lambeau (Stellan Skarsgard) who discovered Will's talents, and Lambeau's college roommunication perspective, it is instructive to see the array of communication styles and strategies these four characters use to help
Will turn his life around. As in real life, no single approach is the best. Will's breakthrough occurs in response LISTENING 151 to McGuire's skilled counseling, but it is clear that his hope for change and growth depends on the genuine concern of all four characters—each of whom offers help in a highly personal way. Dead Man Walking (1995). Rated
R. Catholic nun Helen Prejean (Susan Sarandon) agrees to help convicted murderer Matthew Poncelet (Sean Penn) appeal his death sentence. As time goes on, she realizes that Poncelet is, indeed, guilty of the awful crimes for which he has been convicted. Sister Helen's most important goal is to get Matthew to take responsibility for his
actions. Rather than pushing or trying to persuade him, she listens respectfully and asks open-ended questions that allow Poncelet to reach conclusions on his own about his deeds. While she is shaken by the awfulness of Poncelet's crime, Sister Helen remains steadfast in her respect for him and her concern with his soul. In the face of a horrible crime
Sister Helen Prejean provides viewers with compelling proof that unconditional positive regard can achieve mighty results. 152-183 Ch05 Adler 2/28/05 9:45 AM Page 152 AFTER STUDYING THE MATERIAL IN THIS CHAPTER You should understand: 1. The characteristics of nonverbal communication. 2. The differences between verbal and
nonverbal communication. 3. How culture and gender influence nonverbal communication described in this chapter functions. You should be able to: 1. Identify and describe nonverbal behavior of yourself and others in various contexts. 2. Identify
nonverbal behaviors that repeat, substitute for, complement, accent, regulate, and contradict verbal messages. 3. Recognize the emotional and relational dimensions of your own nonverbal behavior in a tentative manner when such sharing is appropriate. 152-183 Ch05 Adler
2/28/05 9:45 AM Page 153 CHAPTER HIGHLIGHTS Nonverbal communication has several important characteristics: It has great value in conveying information about others, and much of that
information isn't something others intentionally want to reveal. It is especially useful in suggesting how others feel about you and the relationship, although nonverbal communication. While much nonverbal communication is universal, some factors do shape the way we express ourselves and
understand others. 
Culture shapes many nonverbal practices. 
Culture shapes many nonverbal practices.

contradict spoken words, or even deceive others. There are many types of nonverbal communication including Time Physical environment CHAPTER FIVE Nonverbal Communication 152-183 Ch05 Adler 154 2/28/05
PART ONE 9:45 AM Page 154 ELEMENTS OF COMMUNICATION CULTURAL IDIOM rings hollow: sounds insincere There is often a big gap between what people say and what they feel. An acquaintance says, "I'd like to get together again" in a way that leaves you suspecting the opposite. (But how do you know?) A speaker tries to appear confident
but acts in a way that almost screams out, "I'm nervous!" (What tells you this?) You ask a friend what's wrong, and the "nothing" you get in response rings hollow. (Why does it sound untrue?) Then, of course, there are times when another's message comes through even though there are no words at all. A look of irritation, a smile, a sigh—signs like
these can say more than a torrent of words. All situations like these have one point in common—the message was sent nonverbally. The goal of this chapter is to introduce you to this world of nonverbal communication. Although you have certainly recognized nonverbal messages before, the following pages should introduce you to a richness of
information you have never noticed. And though your experience won't transform you into a mind reader, it will make you a far more accurate observer of others—and yourself. We need to begin our study of nonverbal communication by defining this term. At first this might seem like a simple task. If non means "not" and verbal means "words," then
nonverbal communication appears to mean "communication (by mouth) and verbal communication (with words). After this distinction is made, it becomes clear that some nonverbal messages are vocal, and some are not. Likewise, although many verbal
messages are vocal, some aren't. Table 5-1 illustrates these differences. What about languages that don't involve words? Does American Sign Language, for example, qualify as nonverbal communication: "oral and nonoral messages
expressed by other than linquistic means." This rules out not only sign language—sighs, laughs, and other utterances we will discuss soon. CHARACTERISTICS OF NONVERBAL COMMUNICATION Our brief definition only hints at the richness of
nonverbal messages. You can begin to understand their prevalence by trying a simple experiment. Spend an hour or so around a group in the foreign students' lounge on campus, TABLE 5-1 Types of Communication Vocal Communication Nonvocal
Communication Verbal Communication Spoken words Written words Nonverbal Communication Tone of voice, sighs, screams, vocal qualities (loudness, pitch, and so on Adapted from John Stewart and Gary D'Angelo, Together: Communication Tone of voice, sighs, screams, vocal qualities (loudness, pitch, and so on) Gestures, movement, appearance, facial expression, and so on Adapted from John Stewart and Gary D'Angelo, Together: Communication Tone of voice, sighs, screams, vocal qualities (loudness, pitch, and so on) Gestures, movement, appearance, facial expression, and the facial expression ex

Your goal is to see how much information you can learn about the people you're observing from means other than the
verbal messages they transmit. This experiment will reveal several characteristics of nonverbal communication. NONVERBAL COMMUNICATION 155 No matter how eloquently a dog may bark, he cannot tell you that his parents were poor but honest. Bertrand Russell Nonverbal Communication Exists Your observations in the experiment show clearly
that even without understanding speech it is possible to get an idea about how others are feeling. You probably noticed that some people were in a hurry, whereas others seemed happy, confused, withdrawn, or deep in thought. The point is that without any formal experience you were able to recognize and to some degree interpret messages that other
people sent nonverbally. In this chapter, we want to sharpen the skills you already have and to give you a better grasp of the vocabulary of nonverbal language. Nonverbal language. Nonverbal language is nonverbally impossible to not communicate nonverbally.
Suppose you were instructed to avoid communicating any messages at all. What would you do? Close your eyes? Withdraw into a ball? Leave the room? As the photo on this page illustrates, the meaning of some nonverbal messages
Unintentional nonverbal behaviors differ from intentional ones. For example, we often stammer, blush, frown, and sweat without meaning to do so. Some theorists argue that unintentional behavior may provide information, but it shouldn't count as communication. Others draw the boundaries of nonverbal communication more broadly, suggesting
that even unconscious and unintentional behavior conveys messages and thus is worth studying as communication. We take the broad view here because, whether or not our nonverbal behavior reveals information, we aren't always
conscious of what we are communicating nonverbally. In one study, less than a quarter of experimental subjects who had been instructed to show increased or decreased liking of a partner could describe the nonverbally expressive doesn't mean that others will tune into
the abundance of unspoken messages that are available. One study comparing the richness of e-mail to in-person communications, but it also showed that some communicators (primarily men) failed to recognize these messages. 4 Writer (to movie producer Sam
Goldwyn): Mr. Goldwyn, I'm telling you a sensational story. I'm only asking for your opinion, and you fall asleep. Goldwyn: Isn't sleeping an opinion? 152-183 Ch05 Adler 156 2/28/05 PART ONE 9:45 AM Page 156 ELEMENTS OF COMMUNICATION UNDERSTANDING COMMUNICATION TECHNOLOGY EXPRESSIVENESS IN ONLINE
COMMUNICATION Communication scholars have characterized faceto-face interaction as "rich" in nonverbal cues that convey feelings and attitudes. Even telephone conversations carry a fair amount of emotional information via the speakers' vocal qualities. By comparison, most text-based communication on the Internet, such as e-mail and instant.
messaging, is relatively lean in relational information. With only words, subtlety is lost. This is why hints and jokes that might work well in person or on the phone often fail when communicated online. Ever since the early days of e-mail, Internet correspondents have devised a series of "emoticons" using typed characters to convey feelings. The most
common of these is the symbol:), which, of course, represents humorous intent. Less commonly used emotions: :-( is a frown, :-0 surprise, and so on. Even though you can't make your voice louder or softer or change its tone in type, you can use regular keyboard characters to convey a surprisingly large range of feelings.
Asterisks Not all e-mail and instant messaging systems allow the use of italics, which are useful for emphasizing a point. Enclosing a statement in asterisks can add the same sort of light emphasis. Instead of saying I really want to hear from you. Sometimes you can observe a lot by watching. Yogi Berra
Notice how changing the placement of asterisks produces a different message: I really want to hear from *you.* Capitalization 
creates the impression of shouting: HOW ARE YOU DOING? WE ARE HAVING A GREAT TIME HERE. BE SURE TO COME SEE US SOON. Multiple methods: I can't believe you told the boss that I sleep with a teddy bear! I wanted to *die* of embarrassment. Please don't
*EVER* **EVER** do that kind of thing again. Use this type of emphasis sparingly, and only where you want to make your point very strongly. Adapted from K. Baker and S. Baker, How to Say It Online (New York: Prentice Hall, 2001). The fact that you and everyone around you are constantly sending nonverbal clues is important because it means that
you have a constant source of information available about yourself and others. If you can tune into these signals, you will be more aware of how those around you are feeling and thinking, and you will be more aware of how those around you are feeling and thinking, and you will be more aware of how those around you are feeling and thinking, and you will be more aware of how those around you are feeling and thinking, and you will be more aware of how those around you are feeling and thinking, and you will be more aware of how those around you are feeling and thinking, and you will be more aware of how those around you are feeling and thinking, and you will be more aware of how those around you are feeling and thinking, and you will be more aware of how those around you are feeling and thinking, and you will be more aware of how those around you are feeling and thinking, and you will be more aware of how those around you are feeling and thinking, and you will be more aware of how those around you are feeling and thinking, and you will be more aware of how those around you are feeling and thinking, and you will be more aware of how those around you are feeling and thinking, and you will be more aware of how those around you are feeling and thinking, and you will be more aware of how those around you are feeling and thinking are feeling are feeling and thinking are feeling are feeling and thinking are feeling are feeling are feeling are feeling and thinking are feeling are feeli
nonverbal messages serve utilitarian functions. For example, a police officer directs the flow of traffic, and a team of street surveyors uses hand motions to coordinate its work. But nonverbal communication also serves a far more common (and more interesting) series of social functions. For example, a police officer directs the flow of traffic, and a team of street surveyors uses hand motions to coordinate its work. But nonverbal communication also serves a far more common (and more interesting) series of social functions.
involves identity management. Chapter 2 discussed how we strive to create an image of ourselves as we want others to view us. Nonverbal communication. Consider, for example, what happens when you attend a party where 152-183 Ch05 Adler
2/28/05 9:45 AM Page 157 CHAPTER 5 you are likely to meet strangers you would like to get to know better. Instead of projecting your image verbally ("Hi! I'm attractive, friendly, and easygoing"), you behave in ways that will present this identity. You might smile a lot, and perhaps try to strike a relaxed pose. It's also likely that you dress carefully—
even if the image involves looking as if you hadn't given a lot of attention to your appearance. Along with identity management, nonverbal communication allows us to define the kind of relationships we want to have with others. You can appreciate this fact by thinking about the wide range of ways you could behave when greeting another person. You
could wave, shake hands, nod, smile, clap the other person on the back, give a hug, or avoid all contact. Each one of these decisions would send a message about the nature of your relationship with the other person. Nonverbal communication performs a third valuable social function: conveying emotions that we may be unwilling or unable to express—
or ones we may not even be aware of. In fact, nonverbal communication is much better suited to expressing attitudes and feelings than ideas. 6 You can prove this for yourself by imagining how you could express each item on the following list nonverbally:
person in the group. You want to know if you will be tested on this material. You are nervous about trying this experiment. The first, third, and fifth items in this list all involve attitudes; you could probably imagine how each could be expressed nonverbally. By contrast, the second and fourth items involve ideas, and they would be quite difficult to
convey without using words. The same principle holds in everyday life: Nonverbal behavior offers many cues about the way people feel—often more than we get from their words alone. In fact, some research suggests that one important element of communicative competence is nonverbal expressiveness. 7 Nonverbal Expressiveness. 7 Nonverbal Expressiveness. 8 Nonverbal Expressiveness. 9 Nonverbal Ex

AM Page 158 ELEMENTS OF COMMUNICATION UNDERSTANDINGS ON THE INTERNET In recent years, computer-mediated communication (CMC) has become a common channel for personal interaction. A growing number of people around the world exchange e-mail messages as
effortlessly and frequently as they use the telephone. Computer-based news and discussion groups provide a forum for exchanging information on literally thousands of topics. At first, theorists predicted that computer-mediated messages would be more prone to misunderstanding than face-to-face ones. Without nonverbal cues, it seemed that CMC
couldn't match the rich kind of interaction that happens CULTURAL IDIOM come-ons: sexual advances blind guessing: coming to a conclusion without any factual basis for judgment in person, or even over the phone where tone of voice can provide cues about the speaker's feelings and intentions. Recent scholarship, however, suggests that CMC cannot conclusion without any factual basis for judgment in person, or even over the phone where tone of voice can provide cues about the speaker's feelings and intentions.
be as accurate and satisfying as the face-to-face wariety. In one survey, e-mail users acknowledged that the absence of nonverbal cues was a source of misunderstandings in CMC, but they were likely to use both e-mail and other forms of communication (such as the telephone and face-to-face meetings) to clear up those misunderstandings. 9 Perhaps
most tellingly, the users reported a high degree of satisfaction with their mediated interaction. over the policy, reporting that several customers had propositioned them, misinterpreting that several customers had propositioned them.
experiments, subjects are better at identifying positive facial expressions such as happiness, love, surprise, and interest than negative ones such as fear, sadness, anger, and disgust.11 In real life, however, spontaneous nonverbal expressions are so ambiguous that observers are able to identify the emotions they convey no more accurately than by
blind guessing.12 Some people are more skillful than others at accurately decoding nonverbal behavior.13 Those who are better receivers. Decoding ability also increases with age and training, although there are still differences in ability owing to personality and occupation. For instance, extroverts are
relatively accurate judges of nonverbal behavior, whereas dogmatists are not. Interestingly, women seem to be better than men at decoding Source: Used by permission of the estate of Michael Ffolkes. 152-183 Ch05 Adler 2/28/05 9:45 AM Page 159 CHAPTER 5 NONVERBAL COMMUNICATION 159 nonverbal messages. Over 95 percent of the
studies examined in one analysis showed that women are more accurate at interpreting nonverbal signals. 14 Despite these differences, even the best nonverbal behavior, you need to consider several factors: the context in which they occurred at interpreting nonverbal signals.
(e.g., smiling at a joke suggests a different feeling from what is suggested by smiling at another's misfortune); the history of your relationship with the sender (friendly, hostile, etc.); the other's mood at the time; and your feelings (when you're feeling insecure, almost anything can seem like a threat). The important idea is that when you become aware
of nonverbal messages, you should think of them not as facts, but rather as clues that need to be checked out. Nonverbal Communication Is Different from Verbal Communication As Table 5-2 shows, nonverbal communication Is Different from Verbal Communica
valuable to focus on nonverbal behavior. For example, while verbal messages are almost always intentional, nonverbal cues are often unintended, and sometimes unconscious. Nonverbal expression and the ability to read and respond to others' nonverbal behavior
Nonverbal encoding and decoding skills are a strong predictor of popularity, attractiveness, and socio-emotional well-being. 15 Good nonverbal communicators are more persuasive than people who are less skilled, and they have a greater chance of success in settings ranging from careers to poker to romance. Nonverbal sensitivity is a major part of
what some social scientists have called "emotional intelligence," and researchers have come to recognize that it is impossible to study spoken language without paying attention Verbal Communication Nonverbal Communication Complexity One

universal. For example, researchers have found at least six facial expressions that all humans everywhere use and understand: happiness, sadness, fear, anger, disgust, and surprise. 17 Even children who have been blind since birth reveal their feelings using these expressions. Despite these similarities, there are some important differences in the way
people use and understand nonverbal behavior. We'll look at some of these differences now. Culture Cultures have different nonverbal languages as well as verbal ones. Fiorello LaGuardia, legendary mayor of New York from 1933 to 1945, was fluent in English, Italian, and Yiddish. Researchers who watched films of his campaign speeches with the
sound turned off found that they could tell which language he was speaking by the changes in his nonverbal behavior. 18 The meaning of some gestures varies from one culture to another. The "okay" gesture made by joining thumb and forefinger to form a circle is a cheery affirmation to most Americans, but it has less positive meanings in other parts
of the world.19 In France and Belgium it means "You're worth zero." In Greece and Turkey it is a vulgar sexual invitation, usually meant as an insult. Given this sort of crosscultural differences can damage relationships without the
parties ever recognizing exactly what has gone wrong. Edward Hall points out that whereas Americans are comfortable conducting business at a distance of roughly four feet, people from the Middle East stand much closer. 20 It is easy to visualize the awkward advance and retreat pattern that might occur when two diplomats or business people from
these cultures meet. The Middle Easterner would probably keep moving forward to close the gap that feels so wide, whereas the American would continually back away. Both would feel uncomfortable, probably without knowing why. Like distance, patterns of eye contact vary around the world. 21 A direct gaze is considered appropriate for speakers in
Latin America, the Arab world, and southern Europe. On the other hand, Asians, Indians, Pakistanis, and northern Europeans gaze at a listener uncomfortable. Source: Dilbert reprinted by permission of United Feature Syndicate, Inc. 152-183 Ch05 Adler
2/28/05 9:45 AM Page 161 CHAPTER 5 Even within a culture, various groups can have different nonverbal rules. For example, many white teachers use quasi questions that hint at the information they are seeking. An elementary teacher might encourage the class to speak up by making an incorrect statement that demands refutation: "So twelve
divided by four is six, right?" Most white students would recognize this behavior as a way of testing their understanding. But this style of questioning is unfamiliar to many students raised in traditional black cultures, who aren't likely to respond until they are directly questioned by the teacher.22 Given this difference, it is easy to imagine how some
teachers might view minority children as unresponsive or slow, when in fact they are simply playing by a different set of rules. Communicators become more tolerant of others after they understand that unusual nonverbal behaviors are the result of cultural differences. In one study, American adults were presented with videotaped scenes of speakers
from the United States, France, and Germany.23 When the sound was cut off, viewers judged foreigners more negatively than their fellow citizens. But when the speakers' voices were added (allowing viewers to recognize that they were from a different country), the critical ratings dropped. Despite differences like these, many nonverbal behaviors
have the same meanings around the world. Smiles and laughter are a universal signal of positive emotions, for example, whereas the same sour expressions like these are the result of evolution, functioning as survival mechanisms that allowed early humans to convey
emotional states before the development of language. Although nonverbal expressions like these may be universal, the way they are used varies widely around the world. In some cultures the same feelings are perfectly appropriate. Thus, a Japanese may be universal, the way they are used varies widely around the world. In some cultures display rules discourage the overt demonstration of feelings like happiness or anger. In other cultures display rules discourage the overt demonstration of feelings like happiness or anger. In other cultures display rules discourage the overt demonstration of feelings like happiness or anger. In other cultures display rules discourage the overt demonstration of feelings like happiness or anger. In other cultures display rules display
might appear much more controlled and placid than an Arab when in fact their feelings might be identical.25 The same principle operates closer to home among cocultures. For example, observations have shown that black women in all-black groups are nonverbally more expressive and interrupt one another more than do white women in all-black groups are nonverbally more expressive and interrupt one another more than do white women in all-black groups are nonverbally more expressive and interrupt one another more than do white women in all-black groups are nonverbally more expressive and interrupt one another more than do white women in all-black groups are nonverbally more expressive and interrupt one another more than do white women in all-black groups are nonverbally more expressive and interrupt one another more than do white women in all-black groups are nonverbally more expressive and interrupt one another more than do white women in all-black groups are nonverbally more expressive and interrupt one another more than do white women in all-black groups are nonverbally more expressive and interrupt one another more than do white women in all-black groups are nonverbally more expressive and interrupt one another more than do white women in all-black groups are nonverbally more expressive and interrupt one another more than all the properties of the properties of
groups.26 This doesn't mean that black women always feel more intensely than their white counterparts. A more likely explanation is that the two groups follow different cultural rules. The researchers found that in racially mixed groups both black and white women moved closer to the others' style. This nonverbal convergence shows that skilled
communicators can adapt their behavior when interacting with members of other cultures in order to make the exchange more smooth and effective. Gender It's easy to identify stereotypical differences in masculine and feminine styles of nonverbal communication. Just think about exaggerated caricatures of macho men and delicate
woman that appear from time to time. Many humorous films and plays have been created around the results that arise when characters try to act like members of the opposite sex. (For some examples, see the "Feature Films" section at the end of this chapter.) Although few of us behave like stereotypically masculine or feminine movie characters, there
are recognizable differences in the way men and women look NONVERBAL COMMUNICATION 161 Once identified and analyzed, nonverbal communications in terms of our own culture; we read everyone's behavior as if it were our own,
and thus we often misunderstand it.... The language of behavior is extremely complex. Most of us are lucky to have under control one subcultural system—the one that reflects our sex, class, generation, and geographic region. Edward and Mildred Hall 152-183_Ch05_Adler 162 2/28/05 PART ONE 9:45 AM Page 162 ELEMENTS OF
COMMUNICATION and act. Some of the most obvious differences are physiological: height, depth and volume of the voice, and they are better at recognizing others' nonverbal behavior. 27 Most communication scholars agree that social factors have
more influence than biology does in shaping how men and women behave. For example, the ability to read nonverbal cues may have more to do with women's historically less powerful social status: People in subordinate work positions also have better decoding skills. 28 As women continue to gain equal status in the workplace and home, a paradoxical
result may be less sensitivity at reading nonverbal cues. Cultural norms in the Western world distinguish male from female behaviors. 29 For example, women make more eye contact than do men with conversational partners. They are more vocally expressive than men. Women interact at closer distances, both with men and with other women, than do
men in same-sex conversations. Men are more likely to face conversations than women. They require and are given more personal space. Women express more emotions via facial expressions than men. Most noticeably, women
smile considerably more than men. Women gesture more, whereas men use more expansive gestures. After looking at differences like these, it might seem as if men and women communicate in radically differences like these, it might seem as if men and women communicate in radically differences like these, it might seem as if men and women communicate in radically differences like these, it might seem as if men and women communicate in radically differences like these, it might seem as if men and women communicate in radically differences like these, it might seem as if men and women communicate in radically differences like these, it might seem as if men and women communicate in radically differences like these, it might seem as if men and women communicate in radically differences like these, it might seem as if men and women communicate in radically differences like these, it might seem as if men and women communicate in radically differences like these, it might seem as if men and women communicate in radically differences like these, it might seem as if men and women communicate in radically differences like these, it might seem as if men and women communicate in radically differences like these, it might seem as if men and women communicate in radically differences like these, it might seem as if men and women communicate in radically differences like the seem as if men and women communicate in radically differences like the seem as if men and women communicate in radically differences like the seem as if men and women communicate in radically differences like the seem as if men and women communicate in radically differences like the seem as if men and women communicate in radically differences like the seem as if men and women communicate in radically differences like the seem as if men and women communicate in radically differences like the seem as if men and women communicate in radically differences like the seem as if men and women communicate in radically differences like the seem as if men and women comm
described in the preceding paragraph are noticeable, but they are outweighed by the similar rules we follow in areas such as making eye contact, posture, and gestures. You can prove this by imagining what it would be like to use radically different nonverbal rules: standing only an inch away from others, sniffing strangers, or tapping the forehead of
someone when you want his or her attention. While biological sex and cultural norms certainly have an influence on nonverbal style, they aren't as dramatic as the "men are from Mars; women are from 
reading facial expression, tone of voice, and other cues dramatically more difficult.31 Due to a processing deficit in the right hemisphere of the brain, someone with NVLD—especially children— often misinterpret humorous or sarcastic messages literally, since those cues are based
heavily on nonverbal signals. People with NVLD also have trouble figuring out how to behave appropriately in new social situations, so they rely on rote formulas that often don't work. For example, a child who has learned the format way of meeting an adult for the first time by shaking hands and saying "pleased to meet you" might try this approach
with a group of peers. The result, of course, is to be regarded as odd or nerdy. And their disability leads them to miss nonverbal cues sent by other children that this isn't the right approach. 32 Even for those of us who don't suffer from NVLD, the nuances of nonverbal behavior can be confusing. It's worth considering that there may be a physiological
explanation for clueless people who seem socially inept. 152-183 Ch05 Adler 2/28/05 9:45 AM Page 163 CHAPTER 5 ETHICAL CHALLENGE THE POWER OF NONVERBAL INSIGHT NONVERBAL INSI
Suppose that your skill at controlling your own nonverbal behavior became great enough that you were able to present yourself to others' nonverbal behavior gave you a high degree of accuracy in interpreting others' unexpressed
feelings. What ethical obligations would come with your increased nonverbal skill? Would you be obliged to disclose your ability to others? To reveal your motives when trying to influence them? To share your analysis of their behavior? FUNCTIONS OF NONVERBAL COMMUNICATION Although verbal and nonverbal messages differ in many ways,
the two forms of communication operate together on most occasions. The following discussion explains the many functions nonverbal messages relate to verbal ones. Repeating If someone asked you for directions to the nearest drugstore, you could say, "North of here about two blocks," repeating
your instructions nonverbally by pointing north. This sort of repetition isn't just decorative: People remember comments accompanied by gestures more than those made with words alone. 33 Pointing is an example of what social scientists call emblems—deliberate nonverbally by pointing is an example of what social scientists call emblems.
group. For example, we all know that a head nod means "yes," a head shake means "no," a wave means "lean't hear you." Substituting Emblems can also replace a verbal message. When a friend asks you what's new, you might shrug your shoulders instead of answering in words. Not all substituting
consists of emblems, however. Sometimes substituting responses are more ambiguous and less intentional. A sigh, smile, or frown may substituting is especially important when people are reluctant to express their feelings in words. Complementing
Sometimes nonverbal behaviors match the content of a verbal message. Consider, for example, a friend apologizing for forgetting an appointment with you. Your friend's sincerity would be reinforced if the verbal apology were accompanied by the appropriate nonverbal behaviors: the right tone of voice, facial expression, and so on. We often recognize the
significance of complementary nonverbal behavior 152-183 Ch05_Adler 164 2/28/05 PART ONE 9:45 AM ELEMENTS OF COMMUNICATION What you are stands over you . . . and thunders so that I cannot hear what you say to the contrary. Ralph Waldo Emerson Page 164 when it is missing. If your friend's apology were delivered with a shrug, a
smirk, and a light tone of voice, you probably would doubt its sincerity, no matter how profuse the verbal explanation was. Much complementing behavior consists of illustrators—nonverbal behaviors that accompany and support spoken words. Scratching the head when searching for an idea and snapping your fingers when it occurs are examples of
illustrators that complement verbal messages. Research shows that North Americans use illustrators more often when they are emotionally aroused—trying to explain ideas that are difficult to put into words—when they are emotionally aroused—trying to explain ideas that are difficult to put into words—when they are emotionally aroused—trying to explain ideas that are difficult to put into words—when they are furious, horrified, very agitated, distressed, or excited.34 Accenting Just as we use italics to emphasize an idea in print, we use
nonverbal devices to emphasize oral messages. Pointing an accusing finger adds emphasis to criticism (as well as probably creating defensiveness in the receiver). Stressing certain words with the voice ("It was your idea!") is another way to add nonverbal accents. Regulating Nonverbal behaviors can control the flow of verbal communication. For
example, parties in a conversation often unconsciously send and receive turn-taking cues.35 When you are ready to yield the floor, the unstated rule is: Create a rising vocal intonation pattern, then use a falling intonation pattern, then use a falling intonation pattern, or draw out the final syllable of the clause at the end of your statement. Finally, stop speaking. If you want to maintain your
turn when another speaker seems ready to cut you off, you can suppress the attempt by taking an audible breath, using a sustained intonation pattern (because rising and falling patterns suggest the end of a statement), and avoiding any pauses in your speech. Other nonverbal cues exist for gaining the floor and for signaling that you do not want to
speak. Contradicting People often simultaneously express different and even contradictory messages in their verbal and nonverbal behaviors. A common example of this sort of mixed message is the experience we've all had of hearing someone with a red face and bulging veins yelling, "Angry? No, I'm not angry!" Even though some of the ways in
which people contradict themselves are subtle, mixed messages have a strong impact. Research suggests that when a receiver perceives an inconsistency between verbal and nonverbal messages, the nonverbal one carries more weight—more than 12.5 percent more, according to some research.36 Deliberately sending mixed messages might sound
foolish at first, but there are times when we do just this. One deliberate use of mixed messages is to send a message politely but clearly that might be difficult to handle if it were expressed in words. For instance, think of a time when you became bored with a conversation while your companion kept rambling on. At such a time the most
straightforward statement would be, "I'm tired of talking to you and want to go meet someone else." Although it might feel good to be so direct, this kind of honesty is impolite for anyone over five years of age. Instead of being blunt in 152-183 Ch05 Adler 2/28/05 9:45 AM Page 165 CHAPTER 5 situations like this, a face-saving alternative is to express
your disinterest nonverbally. While nodding politely and murmuring, "uh-huh" and "no kidding?" at the appropriate times, you can signal a desire to leave by looking around the room, turning slightly away from the speaker, or even making a point of yawning. In most cases such clues are enough to end the conversation without the awkwardness of
expressing outright what's going on. Deceiving Deception is perhaps the most interesting type of nonverbal communication and one that social scientists have studied extensively. As Chapter 6 explains, most of the messages we exchange are not completely truthful. As you will read there, not all deception is self-serving or malicious: Much of it is
aimed at saving the face of the communicators involved. For example, you might tell a "white lie" to avoid hurting the feelings of a friend who asks your opinion: "That new tattoo looks, uh, really nice." In a situation like this, it's easy to see how nonverbal factors can make the face-saving deception either succeed or fail. Some people are better at
hiding deceit than others. For example, most people—especially women—become more successful liars as they grow older.37 High self-monitors are usually better at hiding their deception than communicators who are less self-aware, and raters judge highly expressive liars as more honest than those who are more subdued.38 Not surprisingly, people
whose jobs require them to act differently than they feel, such as actors, lawyers, diplomats, and salespeople, are more successful at deception than when we observe from the sidelines. 40 It's easiest to catch liars when they haven't
had a chance to rehearse, when they feel anxious or guilty about the information being hidden, or when they feel anxious or guilty about their lies. 41 Imagine, for example, that you want to decline an unwanted invitation with a facesaving lie. Your chances of getting away with the deception are best if you have had advance notice of the invitation. If you are
caught unprepared, your excuse for not attending is likely to be less persuasive. Trust (or lack of it) also plays a role in which deceptive messages are successful: People who are suspicious that a speaker may be lying pay closer attention to the speaker's nonverbal behavior (e.g., talking faster than normal, shifted posture) than do people who are not
suspicious.42 Still, asking questions—even if you are suspicious—isn't especially effective at uncovering detection.43 As you read earlier, people who focus their attention on catching liars are less effective than those who are busy with other mental tasks.44 Table 5-3 lists situations in which deceptive messages are most likely to be obvious. Decades
of research have revealed that there are no surefire nonverbal cues that indicate deception. Nonetheless, there are some cues that may reveal lessthan-totally-honest communication. For example, deceivers typically make more speech errors than truth-tellers: stammers, stutters, hesitations, false starts, and so on. Vocal pitch often rises when people
tell lies, and liars hesitate more.45 Deceivers tend to blink their eyes more often, fidget with their hands, and more rapidly shift their posture. Despite cues like these, it's a mistake to assume that every tongue-tied, fidgeting, eye-blinking person is a liar. How good are people at detecting lies? The range of effectiveness in uncovering deceptive
messages is broad, ranging from 45 to 70 percent.46 As we grow NONVERBAL COMMUNICATION 165 CULTURAL IDIOM the floor: the right or privilege to speak to cut you off: to interrupt you in order to stop you from proceeding with your remarks face saving: protecting one's dignity a white lie: harmless untruth Idiom surefire: certain to succeeding with your remarks face saving: protecting one's dignity a white lie: harmless untruth Idiom surefire: certain to succeeding with your remarks face saving: protecting one's dignity a white lie: harmless untruth Idiom surefire: certain to succeeding with your remarks face saving: protecting one's dignity a white lie: harmless untruth Idiom surefire: certain to succeeding with your remarks face saving: protecting one's dignity a white lie: harmless untruth Idiom surefire: certain to succeeding with your remarks face saving: protecting one's dignity a white lie: harmless untruth Idiom surefire: certain to succeed to succe

contradictory messages. Children between the ages of six and twelve use a speaker's words to make sense of a message. But as adults, we rely more on nonverbal cues to form many impressions. For example, audiences put more emphasis on nonverbal cues to form many impressions.
uncovering deceptive messages is broad, ranging from 45 to 70 percent.50 Sometimes the very suspicion that someone is lying can improve the deceiver's attempts to hide the truth. Research shows that people who probe the messages of deceptive communicators are no better at detecting lies than those who don't investigate the truth of a message
One explanation for this surprising finding is that deceivers who are questioned become more vigilant about revealing the truth and their greater vigilance results in a better cover-up of deception cues. Some people are better than others at uncovering deception. For example, women are consistently more accurate than men at detecting lying and
what the underlying truth is.51 The same research showed that, as people become more intimate, their accuracy in detecting lies actually declines. This is a surprising fact: Intuition suggests that we ought to be better at judging honesty as we become more familiar with others. Perhaps an element of wishful thinking interferes with our accurate
decoding of these messages. After all, we would hate to think that a lover would lie to us. When intimates do become suspicious, however, their ability to recognize deception increases. 52 Despite their overall accuracy at detecting lies, women are more inclined to fall for the deception of intimate partners than are men. No matter how skillful or ineptions are more inclined to fall for the deception of intimate partners than are men. No matter how skillful or ineptions are more inclined to fall for the deception of intimate partners than are men. No matter how skillful or ineptions are more inclined to fall for the deception increases.
agents now are being required to watch a video teaching them techniques for studying body language. Rather than selecting people to be interrogated based on what they look like, Customs agents have been trained to watch what they are their stress levels. Security experts say the result will be safer airports and
public places. Many point to the Israeli airline EI Al's reliance on behavior surveillance. It pioneered observation of behavior and body language in the 1970s. It also hasn't had a hijacking in more than 30 years. Customs officials say their experience show that behavior profiling can work. They overhauled their tactics after some Jamacian and
Colombian women were forced to take laxatives in unsuccessful efforts to discover drugs. After Customs placed more emphasis on looking for suspicious behavior and one-on-one questioning, the "hit rate" at which they found drugs during passenger searches reached 22.5%, compared with 4.2% in 1998. Body language and behavior led to one
prominent terrorism-related arrest. In late 1999, U.S. customs inspector Diana Dean was checking cars coming off a ferry in Port Angeles, Wash., when she noticed Ahmed Ressam acting oddly. He fiddled with the car's center console and failed to make eye contact as she spoke to him. After she asked him to leave his car, Mr. Ressam was found to be
carrying a stack of bomb components. He later confessed to planning to disrupt the milennium celebrations in Los Angeles. Schools that train law-enforcement officers have borrowed heavily from facial and body-language studies. Instructional materials from John E. Reid & Associates, Inc., Chicago, which operates one of the oldest interview and
interrogation training programs, say an untruthful person is "more likely to engage in grooming gestures or major body movements as tension relievers when answering key questions." Posture changes and untruthful person is "more likely to engage in grooming gestures or major body movements as tension relievers when answering key questions." Postures that suggest someone might be lying includes slouching, turning away, or making erratic posture changes. Avoiding eye contact often suggests
untruthfulness, although, for example, Asian women often avoid eye contact with men as a cultural norm. Ann Davis, Joseph Pereira, and William M. Bulkeley Source: The Wall Street Journal, August 15, 2002, p. A1. fiddled with: manipulated in an unconscious manner Technology may be gaining ground on deceivers. In 2002, Mayo Clinic researchers
reported developing a facial imaging device that detected heat patterns in deceivers' skins. 54 Like more familiar polygraph lie detectors, the device seems to actually be measuring anxiety rather than deception itself. The device seems to actually be measuring anxiety rather than deception itself. The device seems to actually be measuring anxiety rather than deception itself. liars is appealing. Before we finish considering how nonverbal behaviors can deceive, it is important to realize that not all deceptive communication is aimed at taking advantage of the recipient. Some are a polite way to express an idea that would be difficult to handle if expressed in words. In this sense, the ability to deliberately send nonverbal
messages that contradict your words can be a kind of communication competence. TYPES OF NONVERBAL COMMUNICATION Now that you understand how nonverbal messages operate as a form of communication, we can look at the various forms of nonverbal messages operate as a form of communication, we can look at the various forms of nonverbal messages operate as a form of communication, we can look at the various forms of nonverbal messages operate as a form of communication, we can look at the various forms of nonverbal messages operate as a form of communication competence.
way we use time all send messages. 152-183_Ch05_Adler 168 2/28/05 PART ONE 9:45 AM Page 168 ELEMENTS OF COMMUNICATION Posture and Gesture Fie, fie upon her! There's language in her eyes, her cheek, her lip. Nay, her foot speaks; her wanton spirits look out at every joint and motive in her body. William Shakespeare Troilus and
Cressida Stop reading for a moment and notice how you are sitting. What does your position say nonverbally about how you feel? Are there other people near you now? What messages are communicated by the
movements and body position of the people on the screen. These simple experiments illustrate the communicative power of kinesics, the study of body movement, gesture, and posture. Posture is a rich channel for conveying nonverbal information. From time to time posture a person drag through the door or slump
over while sitting in a chair, it's apparent that something significant is going on. But most postures of clients were rated as more
empathic than those who did not reflect the clients' postures. 55 Researchers have also found that partners in romantic relationships mirror one another's behaviors. 56 Posture can communicate vulnerability in situations far more serious than mere social or business settings. One study revealed that rapists sometimes use postural clues to select
victims that they believe will be easy to intimidate.57 Easy targets are more likely to walk slowly and tentatively, stare at the ground, and move their arms and legs in short, jerky motions. Gestures are a fundamental element of communication—so fundamental element of communication—so fundamental, in fact, that people who have been blind from birth use them.58 One group of ambiguous fundamental element of communication—so fundamental element of communication elemental element of communication elemental element
gestures consists of what we usually call fidgeting—movements in which one part of the body grooms, massages, rubs, holds, fidgets, pinches, picks, or otherwise manipulators in public, but people still do so
without noticing. For example, one study revealed that deceivers bob their heads more often than truth-tellers.60 Research confirms what common sense suggests—that increased use of manipulators when relaxed. When they let their
guard down (either alone or with friends), they will be more likely to fiddle with an earlobe, twirl a strand of hair, or clean their fingernails. Whether or not the fidgeter is hiding something, observers are likely to interpret manipulators as a signal of dishonesty. Because not all fidgeters are likely to fiddle with an earlobe, twirl a strand of hair, or clean their fingernails. Whether or not the fidgeter is hiding something, observers are likely to interpret manipulators as a signal of dishonesty.
meaning of manipulators. CULTURAL IDIOM let their guard down: act or speak naturally without worrying how others will react Face and Eyes The face and eyes are probably the most noticed parts of the body, and their impact is powerful. For example, smiling cocktail waitresses earn larger tips than un- 152-183 Ch05 Adler 2/28/05 9:45 AM Page
169 CHAPTER 5 NONVERBAL COMMUNICATION 169 UNDERSTANDING DIVERSITY EXPRESSIVE ITALIANS LET HANDS DO THE TALKING A recipe for trouble in Italy: Make a fist, extend index finger and pinkie, thrust forward and up. A snarl is optional. The gesture—an insult suggesting an unfaithful wife—is part of the array of hand jabs, facia
tics and arm movement that add significance and sentiment to nearly every conversation among Italians. "There are gestures for everything from making love to making dinner. The hands can often say things better than words," said Milan design artist Bruno Munari, who compiled a book illustrating some of the most popular Italian gestures.
Munari's Dictionary of Italian Gestures contains dozens of examples stretching from early 19th century Naples to modern signals for a cellular telephone call. Squeezing your chin between thumb and index finger signifies cuteness. Pulling slightly on the skin under the right eye with an index finger shows an agreement has been reached. Consider
something foolish? Place hands together as if in prayer and then lower the pinkies. Technology has added new gestures. The first telephone gesture was a rotating finger, simulating dialing. It was replaced by a push-button movement. Now, with cellular phones widely popular in Italy, the latest phone gesture is a palm pressed to an ear. With
gestures, entire conversations could be conducted in silence. "What do you want?" (Fingertips pinched together.) "I'm hungry." (A curving motion of the hand above the top of the stomach.) "And something to drink?" (Thumb tipped down toward the mouth.) "No, everything's fine. It was delicious." (Shake hand with palm down. Then stick index finger
in cheek and rock side to side.) Some gestures are obvious in their intent. A threat is a thumb slashing across the neck. I'm angry: curl your index fingers together represents an affair or secret meeting. Tapping your forehead with your finger means something is too strange to believe
"A foreigner can come to Italy and learn the language perfectly, but without knowing the gestures you are not really fluent," said Munari. Brian Murphy smiling ones, and smiling nuns collect larger donations than ones with glum expressions and eye contact doesn't mean that their nonverbal messages are always
easy to read. The face is a tremendously complicated channel of expression for several reasons. One reason is the number of expressions people can produce. Another is the speed with which they can change. For example, slow-motion films have been taken that show expressions fleeting across a subject's face in as short a time as a fifth of a second
Finally, it seems that different emotions show most clearly in different parts of the face: happiness and lower face, anger in the lower face and brows and forehead, fear and sadness in the eyes, and disgust in the lower face, anger in the lower face and brows and forehead, fear and sadness in the eyes, and disgust in the eyes, and disgust in the eyes, and disgust in the lower face. Ekman and Friesen have identified six basic emotions that facial expressions reflect—surprise, fear,
anger, disgust, happiness, and sadness.63 Expressions reflecting these emotions—are possible. For instance, it's easy to imagine how someone would look who is fearful and surprised or
disgusted and angry. Research indicates that people are quite accurate at judging facial expressions of these emotions. 64 Accuracy increases when judges know the "target" or have knowledge of the context in which the expressions of these emotions. 152-183_Ch05_Adler PART ONE Source: ©

In mainstream Euro-American culture, meeting someone's glance with your eyes is usually a sign of involvement whereas looking
shopping last night? And I saw this wonderful dress?" It's hard to convey intonation in print, but the question marks indicate a rise in pitch at the end of the sentence, as in a question. Many women, especially younger women, use this intonation in declarative sentences: "This is Sally Jones? I have an appointment with Dr. Smith? And I'd like to change
it to another day?" I cringe when I hear this. The rising intonation sounds timid and lacking in self-confidence; the speaker seems to be asking for approval or permission to speak when there's no need to. And I worry that rising intonation harms women. It gets them taken less seriously than they should be . . . Thomas Hurka Voice The voice itself is
another form of nonverbal communication. Social scientists use the term paralanguage to describe nonverbal, vocal messages. You can begin to understand the power of vocal cues by considering how the meaning of a simple sentence can change just by shifting the emphasis from word to word: This is a fantastic communication book. (Not just any
book, but this one in particular.) This is a fantastic communication book. (The book is good as far as communication book. (This book is a fantastic communication book. (This book is a fantastic communication book. (This book is good as far as communication book.) There are many other
ways the voice communicates—through its tone, speed, pitch, volume, number and length of pauses, and disfluencies (such as stammering, use of "uh,""um,""er," and so on). All these factors can do a great deal to reinforce or contradict the message our words convey. Sarcasm is one instance in which both emphasis and tone of voice help change a
statement's meaning to the opposite of its verbal message. Experience this yourself with the following three statements. The first time through, say them literally, and then say them sarcastically.
have identified the communicative value of paralanguage through the use of content-free speech—ordinary speech that has been electronically manipulated so that the words are unintelligible, but the paralanguage remains unaffected. (Hearing a foreign language that you do not understand has the same effect.) Subjects who hear content-free speech
can consistently recognize the emotion being expressed, as well as identifying its strength.65 The impact of paralinguistic cues is strong. In fact, research shows that listeners pay more attention to the words that are spoken 152-183 Ch05 Adler 2/28/05 9:45 AM Page 171 CHAPTER 5 NONVERBAL COMMUNICATION 171
UNDERSTANDING COMMUNICATION TECHNOLOGY RESEARCH BRINGS A NEW DIMENSION TO A CANDIDATE'S VOICE What if the difference between winning and losing a close election turned out to be a hum in your voice? A new study by Kent State University researchers Stanford W. Gregory Jr. and Timothy J. Gallagher suggests that at
least some of the way that people perceive social standing can be detected in the way their voices change when they are talking with people in conversation to alter their pitch, volume, pace and other characteristics of speech to emulate
one another. This area of study is known as communication accommodation within a little- noticed range of spoken words. The changes are barely detectable, the research focuses on accommodation within a little- noticed range of spoken words. The changes are barely detectable, the research focuses on accommodation within a little- noticed range of spoken words.
box. The paper analyzes the voices of presidential candidates in their debates since 1960. The researchers found that, in every case, the politician whose voice was most steadfast, as measured by the researchers found that, in every case, the politician whose voice was most steadfast, as measured by the researchers found that, in every case, the politician whose voice was most steadfast, as measured by the researchers found that, in every case, the politician whose voice was most steadfast, as measured by the researchers found that, in every case, the politician whose voice was most steadfast, as measured by the researchers found that, in every case, the politician whose voice was most steadfast, as measured by the researchers found that, in every case, the politician whose voice was most steadfast, as measured by the researchers found that, in every case, the politician whose voice was most steadfast, as measured by the researchers found that, in every case, the politician whose voice was most steadfast, as measured by the researchers found that the researchers for the researche
to determine a speaker's attitudes.67 Furthermore, when vocal factors contradict a verbal message, listeners judge the speaker's intention from the paralanguage can affect behavior in many ways, some of which are rather Medium in rate Loud in volume surprising. Researchers have
discovered that communicators were most likely to comply with requests delivered by speakers whose rate was similar to their own.69 Besides complying with same-rate speakers, listeners also Clear enunciation feel more positively about people are to
respond to another Without regional accent Cheerful person's requests. 70 Vocal changes that contradict spoken words are not easy to conceal. If the speaker is trying to conceal fear or anger, the voice will probably sound Firm higher and louder, and the rate of talk may be faster than normal. Sadness Low in pitch produces the opposite vocal pattern:
quieter, lower-pitched speech delivSomewhat slow with pauses 71 ered at a slower rate. Besides reinforcing or contradicting messages, some vocal factors influU.S. IDEAL SPEAKER'S VOICE ence the way a speaker is perceived by others. For example, communicators who speak loudly and without hesitations are viewed as more confiFigure 5-1 Ideal
Speaker's Voice Types dent than those who pause and speak quietly.72 People who speak more in Mexico and the United States. slowly are judged as having greater conversational control than those whose voice sounds less attractive.74 Research has also demonstrated that people with more attractive voices are rated more highly than those whose voice sounds less attractive.74
Just what makes a voice attractive can vary. As Figure 5-1 shows, culture can make a difference. Surveys show that there are both similarities and differences between what Mexicans and Americans view as the "ideal" voice. Touch Besides being the earliest means we have of making contact with others, touching—or haptics—is essential to our healthy
development. During the 152-183 Ch05 Adler 172 2/28/05 PART ONE 9:45 AM Page 172 ELEMENTS OF COMMUNICATION In our now more than slightly cockeyed world, there seems to be little provision for someone to get touched without having to go to bed with whomever does the touching. And that's something to think about. We have mixed
up simple, healing, warm touching with sexual advances. So much so, that it often seems as if there is no middle way between "Don't you dare touch me!" and "Okay, you touched me, so now we should make love!" A nation which is able to distinguish the fine points between offensive and defensive pass interference, bogies, birdies, and par, a schuss
and a slalom, a technical, a personal, and a player-control foul should certainly be able to make some far more obvious distinctions between various sorts of body contact. Sidney Simon Caring, Feeling, Touching nineteenth and early twentieth centuries many babies died from a disease then called marasmus, which, translated from Greek, means
"wasting away." In some orphanages the mortality rate was quite high, but even children in "progressive" homes, hospitals, and other institutions died regularly from the ailment. When researchers finally tracked down the causes of this disease, they found that many infants suffered from lack of physical contact with parents or nurses rather than poor
nutrition, medical care, or other factors. They hadn't been touched enough, and as a result they died. From this knowledge came the practice of "mothering" children in institutions—picking babies up, carrying them around, and handling them several times each day. At one hospital that began this practice, the death rate for infants fell from between
30 and 35 percent to below 10 percent. 75 As a child develops, the need for being touched continues. In his book Touching: The Human Significance of the Skin, Ashley Montagu describes research that suggests that allergies, eczema, and other health problems are, in part, caused by a person's lack of contact as an infant with his or her mother. 76
Although Montagu says that these problems develop early in life, he also cites cases where adults suffering from conditions as diverse as asthma and schizophrenia have been successfully treated by psychiatric therapy that uses extensive physical contact. Touch seems to increase a child's mental functioning as well as physical health. L. J.Yarrow has
conducted surveys that show that babies who have been given plenty of physical stimulation by their mothers and to our environment. 78 For example, touch increases self-disclosure, verbalization of psychiatric patients, and the
preference children have for their counselors. Touch also increases compliance.79 In one study, subjects were approached by a female confederate who request was accompanied by a light touch on the subject's arm, the probability that the subject
would return the dime increased significantly.80 In a similar experiment, subjects were asked by a male or female confederate to sign a petition or complete a rating scale. Again, subjects were especially dramatic: 70 percent
of those who were touched complied, whereas only 40 percent of the untouched subjects complied (indicating a predisposition not to comply).81 An additional power of touch is its on-the-job utility. One study showed that fleeting touches on the hand and shoulder resulted in larger tips for restaurant waiters.82 Touch can communicate many
messages. Researchers have cataloged twelve different kinds of touches, including "positive," "playful," "control," and "ritualistic." 83 Some kinds of touches, including degrees of aggression. Others signify types of relationships. 84
back, Spanish abrazo) Love/intimacy (some caresses, hugs) Sexual arousal (some kisses, strokes) 152-183 Ch05 Adler 2/28/05 9:45 AM Page 173 CHAPTER 5 You might object to the examples following each of these categories, saying that some nonverbal behaviors occur in several types of relationships. A kiss, for example, can mean anything from a
polite but superficial greeting to the most intense arousal. What makes a given touch more or less intense? Researchers have suggested a number of factors:
made Whether anyone else is present The situation in which the touch occurs The relationship between the persons involved NONVERBAL COMMUNICATION 173 The unconscious parent will say all the right
things but not want to touch his child very much. The child's confusion comes from the inconsistency of levels: if they really approve of me so much like they say they do, why won't they touch me? William Schutz Here Comes Everybody In traditional U.S. culture, touching is generally more appropriate for women than for men.85 Males touch their
male friends less than they touch their female friends and also less than females touch their female friends. Fear of homosexuality seems to be a strong reason why many men are reluctant to touch one another. Although females are more comfortable about touching than men, gender isn't the only factor that shapes contact. In general, the degree of
touch comfort goes along with openness to expressing intimate feelings, an active interpersonal style, and satisfactory relationships.86 Physically prefer others who they find attractive.87 For example, women who are perceived as
attractive have more dates, receive higher grades in college, persuade males with greater ease, and receive lighter court sentences. Both men and women whom others view as attractive are rated as being more sensitive, kind, strong, sociable, and interesting than their less-fortunate brothers and sisters. Who is most likely to succeed in business?
Place your bet on the attractive job applicant. For example, shorter men have more difficulty finding jobs in the first place, and men over six-foot-two receive starting salaries that average 12.4 percent higher than comparable applicants under six feet. Cartoon Features Syndicate. Clothing Besides protecting us from the elements, clothing is a means of nonverbal communication, providing a relatively straightforward (if sometimes expensive) method of impression management. Clothing can be used to convey economic status, educational level, social status, moral standards, athletic ability and/or
interests belief system (political, philosophical, religious), and level of sophistication. Research shows that we do make assumptions about people based on their clothing often gain persuasiveness. For example, experimenters dressed in uniforms resembling police officers were more successful than those
dressed in civilian clothing in requesting pedestrians to pick up litter and in persuading them to lend a dime to an overparked motorist.89 Likewise, solicitors wearing sheriff's and nurse's uniforms increased the level of contributions to law enforcement and health-care campaigns. 90 Uniforms aren't the only kind of clothing that carries influence. In
one study, a male and female were stationed in a hallway so that anyone who wished to go by had to avoid them or pass between them. In one condition, the conversationalists wore "formal daytime dress"; in the other, they wore "casual attire." Passersby behaved differently toward the couple depending on the style of clothing: They responded
positively with the well-dressed couple and negatively when the same people were casually dressed in a high-status manner. Pedestrians were more likely to return lost coins to well-dressed people than to those dressed in low-status
clothing.92 We are also more likely to follow the lead of high-status dressed in lower-status clothing.93 Women who are
wearing a jacket are rated as being more powerful than those wearing only a dress or skirt and blouse.94 As we get to know others better, the importance of clothing is especially important in the early stages of a relationship, when making a positive first impression is necessary in order to encourage others
to get to know us better. This advice is equally important in personal situations and in employment interviews. In both cases, your style of dress (and personal grooming) can make all the difference between the chance to progress further and outright rejection. 152-183 Ch05 Adler 2/28/05 9:45 AM Page 175 CHAPTER 5 NONVERBAL
COMMUNICATION 175 UNDERSTANDING DIVERSITY MARKED: WOMEN IN THE WORKPLACE Some years ago I was at a small working conference of four women and eight men. Instead of concentrating on the discussion, I found myself looking at the three other women at the table. One woman had dark brown hair in a classic style that was a
cross between Cleopatra and Plain Jane. The severity of her straight hair was softened by wavy bangs and ends that turned under. Because she was beautiful, the effect was more than plain. The second woman was older, full of dignity and composure. Her hair was cut in a fashionable style that left her with only one eye, thanks to a side part that let a
curtain of hair fall across half her face. The third woman's hair was wild, a frosted blond avalanche falling over and beyond her shoulders. When she spoke, she frequently tossed her head, thus calling attention to her hair and away from her lecture. Then there was makeup. The first woman wore facial cover that made her skin smooth and pale. The
second wore only a light gloss on her lips and a hint of shadow on her eyes. The third had blue bands under her eyes, dark blue shadow, mascara, bright red lipstick, and rouge; her fingernails also flashed red. I considered the clothes each woman had worn on the three days of the conference: In the first case, man-tailored suits in primary colors with
solid-color blouses. In the second, casual but stylish black T-shirt, a floppy collarless jacket and baggy slacks or skirt in neutral colors. The third wore a sexy jumpsuit; tight sleeveless jersey and tight yellow slacks; a dress with gaping armholes and an indulged tendency to fall off one shoulder. As I amused myself finding patterns and coherence in
these styles and choices, I suddenly wondered why I was scrutinizing only the women. I scanned the table to get a fix on the styles and types of the women at the conference because each of us had to make decisions about
hair, clothing, makeup and accessories, and each of those decisions too, but their choices carried far less meaning. Every style available to us was marked. The men could have chosen styles that were marked, but they didn't have to, and in
this group, none did. Unlike the women, they had the option of being unmarked. There could have been a cowboy shirt with string tie or a three-piece suit or a necklaced hippie in jeans. But there wasn't. All eight men wore brown or blue slacks and standard-style shirts of light colors. No man wore sandals or boots; their shoes were dark, closed,
comfortable, and flat. In short, unmarked. I asked myself what style we women could have been unmarked, like the men's. The answer was: none. There is no unmarked woman. There is no unmarked woman.
woman's hair has no particular style, this in itself is taken as a statement that she doesn't care how she looks—an eloquent message that can disqualify a woman for many positions. Women have to choose between shoes that are deemed attractive. If a woman's clothes are tight or revealing (in other words, sexy), it
sends a message—an intended one of wanting to be attractive but also a possibly unintended one of availability. But if her clothes are not sexy, that too sends a message, lent meaning by the knowledge that they could have been. Looking at the men and women sitting around the conference table, I was amazed at how different our worlds were.
Though men have to make choices too, and men's clothing styles may be less neutral now than the riotous range of colors and styles from which women must choose. But even this contrast in the range from which men and
women must choose is irrelevant to the crucial point: A man can choose a style that will not attract attention or subject him to any particular interpretation, but a woman can't. This does not mean that men have complete freedom when it comes to dress. Quite the contrary—they have much less freedom than women have to express their personalities
in their choice of fabrics, colors, styles, and jewelry, But one freedom they have that women don't is the point of this discussion—the freedom to be unmarked. Deborah Tannen Talking from 9 to 5 152-183 Ch05 Adler 176 2/28/05 PART ONE 9:45 AM Page 176 ELEMENTS OF COMMUNICATION ETHICAL CHALLENGE CLOTHING AND IMPRESSION
MANAGEMENT Using clothing as a method of creating impressions is a fact of life. Discover for yourself how dressing can be a type of deception. 1. Identify three examples from your experience when someone dressed in a manner that disguised or misrepresented his true status or personal attributes. What were the consequences of this
misrepresentation for you or others? 2. Now identify three occasions in which you successfully used clothing to create a favorable but inaccurate impression. What were the consequences of this deception for others? 3. Based on your conclusions, define any situations when clothing may be used as an unethical means of impression management. List
both "misdemeanors," in which the consequences are not likely to cause serious harm, and "felonies," in which the deception has the potential to cause serious harm. Distance The study of the way people and animals use space has been termed proxemics. Preferred spaces are largely a matter of cultural norms. For example, people living in
hyperdense Hong Kong manage to live in crowded residential quarters that most North Americans would find intolerable.96 Anthropologist Edward T.Hall has defined four distance depending on how we feel toward the other person at a given time, the
context of the conversation, and our personal goals. Intimate distance begins with skin contact and ranges out to about eighteen inches. The most obvious context for intimate distance between individuals also occurs in less
intimate circumstances; visiting the doctor or dentist, at the hairdresser's, and during some athletic contests. Allowing someone to move into the intimate zone usually is a sign of trust. Personal distance at which most relational partners stand in
public. We are uncomfortable if someone else "moves in" to this area without invitation. The far range of personal distance runs from about two-and-one-half to four feet. This is the zone just beyond the other person's reach—the distance runs from about two-and-one-half to four feet. This is the zone just beyond the other person's reach—the distance runs from about two-and-one-half to four feet. This is the zone just beyond the other person's reach and the contract runs from a co
range: Interaction is still reasonably personal, but less so than communication that occurs a foot or so closer. Social distance range from four to seven feet, is the distance at which conversations usually occur between
salespeople and customers and between people who work together. We use the far range of social distance—seven to twelve feet—for more formal and impersonal situations. This is the range at which we generally sit from the boss. Public distance
is the one most teachers use in the classroom. In the farther range of public space—twenty-five feet and beyond—two-way communication becomes difficult. In some cases it's necessary for speak- 152-183 Ch05 Adler 2/28/05 9:45 AM Page 177 CHAPTER 5 NONVERBAL COMMUNICATION 177 UNDERSTANDING DIVERSITY DOING BUSINESS
ACROSS CULTURES In a world where international business is becoming increasingly more common, communicators who don't understand and adapt to cultural differences are likely to encounter problems that can disrupt their relationships. In this scenario, two businesspeople from different backgrounds fail to recognize and appreciate each
other's cultural norms. Mike is from the United States, and is used to a "time is money" task-oriented approach. Miguel understood each other's cultural communication styles, they would have been more able to adapt to them
and less upset by what seemed to each to be inappropriate behavior. Mike Miguel (To himself) Why aren't we getting on with it? (To himself) Why aren't we getting on with it? (To himself) Why aren't we getting on with it? (To himself) Why aren't we getting on with it? (To himself) Why aren't we getting on with it? (To himself) Why aren't we getting on with it? are new to Miguel, but how can I count on this guy when all he does is ask me questions about myself, my background, my interests, my family, and my "philosophy"! Why does he have to be so nosy? I don't know him well enough yet to get into that personal stuff. I know he's just invited me to have lunch with him, but it's a thirty minute drive to the
one o'clock appointment I scheduled, and I have to be on time. All I wanted to do was run through this proposal quickly the first time, see if he had any interest and if he did come back again to see about doing business. (To himself) It's a quarter to twelve. I've
been here with Mike for forty-five minutes already, and I haven't even begun to talk business. How can I know if I want to do business with him unless I know anything about me! Where I come from, we don't like to do business with
strangers. We like to know something about the other person and feel we can at least begin to trust them before we start to talk business seriously. It's too bad he turned me down for lunch. I think we could do business. But first I've got to feel at least a little
sure about who I'm doing business with. Sometimes I think that all these Anglos want to talk about is business with Hispanics before. Why should it be any different this time? (To himself) Oh, well, I've never had any luck doing business with gringos before. Why should it be any different this time?
this time? Thanks for the invitation to have lunch with you, Miguel, but I've got to get along to my next appointment. Here's my card. Maybe we can do business next time. Oh, that's all right, Mike. We'll have lunch another time. Come back again. I'd like to get to know you better. Maybe we can do business next time. Adapted from John F. Kikoski and
Catherine Kano Kikoski, Reflexive Communication in the Culturally Diverse Workplace (Westport, CT: Quorum, 1996), pp. 2-3. ers to use public distance owing to the size of their audience, but we can assume that anyone who voluntarily chooses to use it when he or she could be closer is not interested in having a dialogue. Choosing the optimal
distance can have a powerful effect on how we regard others and how we respond to them. For example, students are more satisfied with teachers who reduce the distance between themselves and their classes. They also are more satisfied with teachers who reduce the distance between themselves and their classes. They also are more satisfied with teachers who reduce the distance between themselves and their classes. They also are more satisfied with teachers who reduce the distance between themselves and their classes.
178 ELEMENTS OF COMMUNICATION CULTURAL IDIOM follow the teacher's instructions.98 Likewise, medical patients are more satisfied with physicians who are not standoffish.99 cooling your heels: waiting impatiently Time mainlanders: people who live in the continental United States laid-back: relaxed, calm stayed put: remained in space
Social scientists use the term chronemics for the study of how human beings use and structure time. The way we handle time can express both intentional messages. 100 Social psychologist Robert Levine describes several ways that time can communicate. 101 For instance, in a culture like ours that values time highly, waiting can be
an indicator of status. "Important" people (whose time is supposedly more valuable than that of others) may be seen by appointment only, whereas it is acceptable to intrude without notice on lesser beings. To see how this rule operates, consider how natural it is for a boss to drop into a subordinate's office unannounced, whereas some employees would
never intrude into the boss's office without an appointment. A related rule is that low-status people must never make more important people wait. It would be a serious mistake to show up late for a job interview, although the interviewer might keep you cooling your heels in the lobby. Important people are often whisked to the head of a restaurant or
airport line, whereas the presumably less exalted are forced to wait their turn. The use of time depends greatly on cultures, punctual mainlanders often report welcoming the laid-back Hawaiian approach to time. One psychologist discovered the difference
between North and South American attitudes when teaching at a university in Brazil.103 He found that some students arrived halfway through a two-hour class and that most of them stayed put and kept asking questions when the class was scheduled to end. A half-hour after the official end of the class, the professor finally closed off discussion,
because there was no indication that the students intended to leave. This flexibility of time is quite differences are geographic. In New York City, the party invitation may say "9 P. M.," but nobody would think of showing up
before 9:30. In Salt Lake City, guests are expected to show up on time, or perhaps even a bit early. 104 Even within the same geographic area, different groups establish their own rules about the use of time. Consider your own experience. In school, some instructors begin and end class punctually, whereas others are more casual. With some people you
```

```
feel comfortable talking for hours in person or on the phone, whereas with others time seems to be precious and not meant to be "wasted." Territoriality Whereas personal space is the invisible bubble we carry around as an extension of our physical being, territory is fixed space. Any area, such as a room, house, neighborhood, or country, to which we carry around as an extension of our physical being, territory is fixed space.
assume some kind of "rights" is our territory. Not all territory is permanent. We often stake out space for ourselves in the library, at the beach, and so on by using markers such as books, clothing, or other personal possessions. The way people use space can communicate a good deal about power and status relationships. Generally, we grant people
with higher status more personal territory and greater privacy. 105 We knock before entering the boss's office, whereas a boss can usually walk into our work area without hesitating. In tradi- 152-183 Ch05 Adler 2/28/05 9:45 AM Page 179 CHAPTER 5 NONVERBAL COMMUNICATION 179 tional schools, professors have offices, dining rooms, and
even toilets that are private, whereas the students, who are presumably less important, have no such sanctuaries. In the military, greater space and privacy usually come with rank: Privates sleep forty to a barracks, sergeants have government-provided houses. Environment The physical environment people
create can both reflect and shape interaction. This principle is illustrated right at home. The impressions that home designs communicate can be remarkably accurate. Researchers showed ninety-nine students slides of the insides or outsides of twelve upper-middle-class homes and then asked them to infer the personality of the owners from their
impressions.106 The students were especially accurate after glancing at interior photos. The decorating schemes communicated accurate information about the homeowners' intellectualism, politeness, maturity, optimism, tenseness, willingness to take adventures, family orientations, and reservedness. The home exteriors also gave viewers accurate
perceptions of the owners' artistic interests, graciousness, privacy, and quietness. Besides communicating information about the designer, an environment can shape the kind of interaction that takes place in it.107
 The experimenters set up three rooms: an "ugly" one, which resembled a janitor's closet in the basement of a campus building; an "average" room, which was a professor's office; and a "beautiful" room, which was furnished with carpeting, drapes, and comfortable furniture. The subjects in A team of social scientists studying United Nations
deliberations was puzzled by the unexpected and influential role that the ambassador from Ireland was playing in Middle East negotiations. It wasn't until communication patterns were considered that the answer became clear. The Irish ambassador, it turns out, sits alphabetically among delegates from Iran, Israel, Jordan, and Kuwait. This
arrangement facilitated communicative ties and, as a result, Ireland discovered itself playing the role of Mideast peace broker. Aaron Cargile 152-183 Ch05 Adler 180 2/28/05 PART ONE 9:45 AM ELEMENTS OF COMMUNICATION A good house is planned from the inside out. First, you decide what it has to do for its occupants. Then, you let the
functions determine the form. The more numerous and various those functions, the more responsive and interesting the house should be. And it may not look at all like you expect. Dan MacMasters Los Angeles Times Page 180 the experiment were asked to rate a series of pictures as a way of measuring their energy and feelings of well-being while at
work. Results of the experiment showed that while in the ugly room the subjects became tired and bored more quickly and took longer to complete their task. When they moved to the beautiful room, however, they rated the faces they were judging higher, showed a greater desire to work, and expressed feelings of importance, comfort, and
enjoyment.The results teach a lesson that isn't surprising:Workers generally feel better and do a better job when they're in an attractive environments to improve communication. Psychologist Robert Sommer found that redesigning the convalescent ward of a
hospital greatly increased the interaction among patients. In the old design, seats were placed shoulder to shoulder around the edges of the ward. When the chairs were grouped around small tables so that patients faced each other at a comfortable distance, the number of conversations doubled. 108 The design of an entire building can shape
communication among its users. Architects have learned that the way housing projects are designed controls to a great extent the contact neighbor contacts than do those living in less heavily traveled parts of the building, and tenants
have talked about how designing an environment can shape communication, but there is another side to consider. Watching how people use an already existing environment can be a way of telling what kind of relationships they want. For example, Sommer watched students in a college library and found that there's a definite pattern for people who
want to study alone. While the library was uncrowded, students almost always chose corner seats at one of the empty rectangular tables. 110 Finally, each table was occupied by one readers would then choose a seat on the opposite side and far end of an occupied by one readers would then choose a seat on the opposite side and far end of an occupied by one readers. New readers would then choose a seat on the opposite side and far end of an occupied by one readers.
other readers. One of Sommer's associates tried violating these "rules" by sitting next to, and across from, other female readers when more distant seats were available. She found that the approached women reacted defensively, either by signaling their discomfort through shifts in posture or gesturing or by eventually moving away. SUMMARY
Nonverbal communication consists of messages expressed by nonlinguistic means. There are nonverbal dimensions to all spoken language, and there are sign languages that are not spoken. Nonverbal behavior is an integral part of virtually all communication, and nonverbal skill is a positive pre- dictor of relational success. There are several important
characteristics of nonverbal communication. First is the simple fact that it exists—that communicate nonverbally; humans constantly send messages about 152-183 Ch05 Adler 2/28/05 9:45 AM Page 181 CHAPTER 5 themselves that
are available for others to receive. The third characteristic is that nonverbal communication is ambiguous; there are many possible interpretations for any behavior. This ambiguity makes it important for the receiver to verify any interpretation is
different from verbal communication in complexity, flow, clarity, impact, and intentionality. Some nonverbal communication is influenced by culture and gender. While there are some universal expressions, even the manner in which these expressions are used reflects the communication is influenced by culture and gender. While there are some universal expressions, even the manner in which these expressions are used reflects the communication is influenced by culture and gender. While there are some universal expressions, even the manner in which these expressions are used reflects the communication is influenced by culture and gender. While there are some universal expressions, even the manner in which these expressions are used reflects the communication is influenced by culture and gender. one culture may express different messages in another. We stated that nonverbal communication serves many functions: repeating, substituting, complementing, accenting, regulating, and contradicting verbal behavior, as well as deceiving. The remainder of this chapter introduced the many ways in which humans communicate nonverbally: through
posture, gesture, use of the face and eyes, voice, touch, clothing, distance, time, territoriality, and physical environment. KEY TERMS affect blends 169 chronemics 170 emblems 163 illustrators 164 intimate distance 176 proxemics
176 public distance 176 social distance 176 territory 177 ACTIVITIES 1. Observing and Reporting Nonverbal Behaviors that are available to you whenever you encounter another person. It will also help prevent you from jumping to conclusions about the meaning of those
behaviors without checking out your interpretations. You can try the exercise either in or outside of class, and the period of time over which you do it is flexible, from a single class period to several days. In any case, begin by choosing a partner, and then follow these directions: NONVERBAL COMMUNICATION 181 1. For the first period of time
(however long you decide to make it), observe the way your partner behaves. Notice how he or she moves; his or her mannerisms, postures, way of speaking; how he or she dresses; and so on. To remember your observations, jot them down. If you're doing this exercise out of class over an extended period of time, there's no need to let your observations.
interfere with whatever you'd normally be doing: Your only job here is to compile a list of your partner's behaviors. In this step, you should be careful not to interpret your partner's actions; just record what you see. 2. At the end of the time period, share what you've seen with your partner's actions; just record what you see. 2. At the end of the time period, share what you've seen with your partner's actions; just record what you see. 2. At the end of the time period, share what you've seen with your partner's actions; just record what you see. 2. At the end of the time period, share what you've seen with your partner's actions; just record what you see. 2. At the end of the time period, share what you've seen with your partner's actions; just record what you see. 2. At the end of the time period, share what you've seen with your partner's actions; just record what you see. 2. At the end of the time period, share what you've seen with your partner's actions; just record what you see. 2. At the end of the time period, share what you've seen with your partner's actions; just record what you see. 2. At the end of the time period, share what you've seen with your partner's actions; just record what you see. 2. At the end of the time period, share what you've seen with your partner's actions; just record what you see. 2. At the end of the time period, share what you've seen with your partner's actions at the period of the time perio
time, your job is not only to observe your partner's behavior but also to interpret it. This time in your conference you should tell your partner what you thought his or her actions revealed. For example, if your partner what you thought his or her appearance, or that he
or she was trying to be more comfortable? If you noticed him or her yawning frequently, did you think this meant that he or she was bored, tired from a late night, or sleepy after a big meal? Don't feel bad if your guesses weren't all correct. Remember that nonverbal
clues you observe can help build a relationship with another person. 2. Culture and Nonverbal Communication 1. Identify at least three significant differences between nonverbal practices in two cultures or cocultures (e.g., ethnic, age, or socioeconomic groups) within your own society. 2. Describe the potential difficulties that could arise out of the
differing nonverbal practices when members from the cultural groups interact. Are there any ways of avoiding these difficulties? 3. Now describe the advantages that might come from differing cultural nonverbal practices. How might people from diverse backgrounds profit by encounter ing one another's customs and norms? 152-183 Ch05 Adler 182
2/28/05 PART ONE 9:45 AM Page 182 ELEMENTS OF COMMUNICATION 3. Kinesics in Action You can appreciate the many ways kinesic cues operate by identifying examples from your own experience when body movement served each of the following nonverbal functions:
Contradicting 4. The Eyes Have It Prove for yourself the role eye contact plays in social influence by trying a simple experiment. 1. Choose a situation where you can make simple requests from a series of strangers. You might, for example, ask to cut in line to use a photocopying machine, or you could ask passersby for a small amount of change to
make an important phone call. 2. Make such a request to at least twenty people. Use the same words for each request but alternate your nonverbal behavior. Half the time make direct eye contact, and the other half of the time avoid looking directly at the other person when you make your request. 3. Record your results, and see if your eye behavior.
played any role in generating compliance to your request. 4. If eye contact does make a difference, describe how you could apply your findings to real-life situations. 5. Building Vocal Fluency You can become more adept at both conveying and interpreting vocal messages by following these directions. 1. Join with a partner and designate one person A
and the other B. 2. Partner A should choose a passage of twenty-five to fifty items from the telephone directory, using his or her voice to convey one of the following attitudes: a. b. c. d. e. Egotism Friendliness Insecurity Irritation Confidence 3. Partner B should try to detect the emotion being conveyed. 4. Switch roles and repeat the process. Continue
alternating roles until each of you has both conveyed and tried to interpret at least four emotions. 5. After completing the preceding steps, discuss the following questions: a. What vocal cues did you use to make your guesses? b. Were some emotions easier to guess than others? c. Given the accuracy of your guesses, how would you assess your ability
to interpret vocal cues? 6. How can you use your increased sensitivity to vocal cues to improve your everyday communication competence? 6. The Rules of Touch Like most types of nonverbal behavior, touching is governed by cultural and social rules. Imagine you are writing a guidebook for visitors from another culture. Describe the rules that govern
touching in the following relationships. In each case, describe how the gender of the participants affects the rules. An adult and a five-year-old Two good friends Doss and employee 7. Distance Violations You can test the importance of distance for yourself by violating the cultural rules for use of the proxemic
zones outlined on pages 176-177. 1. Join with a partner. Choose which one of you will be the experimenter and which will be the experimenter should deliberately use the "wrong" amount of space for the context. Make the violations, the experimenter should deliberately use the "wrong" amount of space for the context. Make the violations, the experimenter should deliberately use the "wrong" amount of space for the context. Make the violations as subtle as possible. You might, for instance, gradually move into another person's
intimate zone when personal distance would be more appropriate. (Be careful not to make the violations too offensive!) 3. The observer should record the verbal and nonverbal reactions of others when the distance zones are violated. After each experiment, inform the people involved about your motives and ask whether they were consciously aware of
the reason for any discomfort they experienced. 152-183 Ch05 Adler 2/28/05 9:45 AM Page 183 CHAPTER 5 FOR FURTHER EXPLORATION Print Resources For a more detailed list of readings about nonverbal communication, see the CD-ROM that came with this book, and the Understanding Human Communication Web site at www.oup.com/us/uhc

NONVERBAL COMMUNICATION 183 The Communicative Value of Nonverbal Behavior For a better understanding of nonverbal communication, there is value in watching amount of information that can be gained from visual and vocal behavior will give
an appreciation for the communicative value of nonverbal Behavior, and the details that cannot be understood will show its limitations. The Nuances of Nonverbal Behavior The Man in the Iron Mask (1998). Rated PG-13. Leonardo DiCaprio plays two characters: the heartless French King Louis XIV and his heroic deposed twin brother, Philippe
DiCaprio's acting gives Louis and Philippe different identifies. Identifying the different behaviors of each character provides good practice in observing and recording nonverbal communication. Masculine and Feminine Nonverbal Behavior The Birdcage (1996). Rated PG-13. Tootsie (1982). Rated PG-13. Tootsie
descriptions of each film below and descriptions of other movies that illustrate nonverbal communication, see the CD-ROM that came with this book, and the Understanding Human Communication Web site at www.oup.com/us/uhc. Making Sense of Nonverbal Behavior At First Sight (1999). Rated PG-13. Blind since birth, Virgil Adamson (Val Kilmer)
regains his sight as an adult. When the surgical bandages are removed, he opens his eyes to a word that is confusing and terrifying. The movie, based on a true story, illustrates how sighted people can take for granted their understanding of nonverbal messages. Virgil asks his girlfriend, "What does that face mean?" He is unfamiliar with the relational
cues being sent in a coy smile, a pained grimace, or an embarrassed blush. Ultimately, they both learn that assigning meaning to sensor y information and nonverbal behavior is not a natural ability—it is a skill that must be learned and honed. One way to recognize differences between masculine and feminine styles of nonverbal communication is to
who can't get any roles—at least as a man. In a flash of inspiration, he transforms himself into Dorothy Michaels, a middle-aged woman, and wins a part in a daytime soap opera. Robin Williams takes on a Tootsie-like role in Mrs. Doubtfire, where he plays Daniel Hillard, a divorced father and the eponymous housekeeper who cares for his own children
In the climactic scene, Williams plays both roles in a tour de force of nonverbal gender-switching. In yet another twist on the masculine/feminine theme, Robin Williams plays a man who teaches his gay partner to be more macho in The Birdcage. The goal, once again, is disguise: The partners want their soon-to-be in-laws to believe they are brothers,
not lovers. PART TWO 184-225 Ch06 Adler 2/28/05 9:46 AM Page 184 CASE STUDY Last year you met Hideki in a business class. Like you, he was genuinely interested in the subject and after a few weeks of conversations in class and over coffee, you decided to become study partners. Working together helped both your grades, and you enjoyed one
another's company as well. You had never known anyone from Japan before, and learning about that country and its culture was really interesting. You began spending time together socially, and after a couple of months you considered him a friend as well as a fellow student. Toward the end of the semester you worked together on a term project,
which was to develop a business plan for a start-up enterprise. Your idea was a textbook co-op—a service by which students could buy, sell, and trade course books without paying the college bookstore. A CHALLENGING BUSINESS FRIENDSHIP The plan earned an A grade, but more importantly you were convinced that it had real potential for
success. Over the summer you and Hideki spent an increasing amount of time together working on the co-op idea. Your met his family when they visited town, and the two of you went on out-oftown vacations with other friends. By the end of the summer, you decided to file for a business license and open a bank account for the co-op. For the most
part, you are glad to have Hideki as a partner. But you are beginning to have a few concerns. For one thing, his personal style is a bit hard to take. His politeness sometimes crosses the line and feels aloof. He is usually right about business matters, but getting him to critique your ideas is very hard. For example, it took you a week to get Hideki to
confess that he didn't like the name you had suggested for the business. "Why didn't you just tell me?" you asked. "Perhaps I was wrong and overreacting," he replied. You would feel much better if he just told you what was on his mind. On the personal side, you are starting to feel a little cramped by Hideki's friendship. Given the choice, he would
spend almost all his free time socializing with you and your friends. You do enjoy his company, but a little time apart would be good too. But knowing how kind and diplomatic Hideki is, you are beginning to feel
bored by the day-to-day routine of working on the job. You don't want to jeopardize your friendship or the business partnership, but you need to do something so you don't start holding grudges against Hideki. Use the information in Part II of Understanding Human Communication to explore what you might do to improve matters. 184-
225 Ch06 Adler 2/28/05 9:46 AM Page 185 CHAPTER 6 CHAPTER 7 1. Where would you place your relationship with Hideki on the personal-impersonal continuum? What types of intimacy does it contain? 1. What weather-related adjectives would you use to describe the communication climate in your relationship with Hideki? What kinds of
confirming communication described by Gibb (pages 232-235) might improve this climate? 2. What role might culture (yours and his) play in the concerns you have about your relationship with Hideki? Give reasons for your answer. 4. What dialectical
tensions (pages 201-204) operate in your relationship with Hideki? What strategies (pages 210-212) and guidelines (pages 213-214) could you use to help decide whether and how to address your concerns about the relationship with Hideki? Are any
alternatives to self-disclosure (pages 214-219) appropriate in this situation? 2. How would you describe the style you might choose for dealing with your concerns? 3. Describe how you might choose an assertive, win-win approach to addressing your
concerns with Hidek. (pages 239-243, 249-254). Might your approach be different if your partner was from the United States instead of Japan? INTERPERSONAL COMMUNICATION As you read the chapters in this unit, consider the following: 184-225_Ch06_Adler 2/28/05 9:46 AM Page 186 AFTER STUDYING THE MATERIAL IN THIS CHAPTER
You should understand: 1. The characteristics that distinguish interpersonal relationships from impersonal ones. 2. The content and relationships from impersonal dimensions of every message. 3. The role of metacommunication in conveying relational development and
deterioration. 6. Tension in relationships. 7. Reasons for self-disclosure and the Johari Window model of self-disclosure. 8. Characteristics of and guidelines for effective and appropriate self-disclosure. 8. Characteristics of and guidelines for effective and appropriate self-disclosure. 8. Characteristics of and guidelines for effective and appropriate self-disclosure. 9. The functions served by lies, equivocation, and hints. You should be able to: 1. Identify interpersonal communication. 2. Identify the
content and relational dimensions of a message. 3. Distinguish among types of intimacy and influences on intimacy and influences on intimacy and the dialectical tensions present in a relationships and the dialectical tensions present in a relationship and the dialectical tensions present in a relation and the dialectical tensions present in a relation and the dialectical tension an
messages, 7. Identify the types of nondisclosing messages you use, the functions of these messages, and their ethical validity, 184-225 Ch06 Adler 2/28/05 9:46 AM Page 187 CHAPTER HIGHLIGHTS Truly interpersonal communication has several characteristics that makes it worth studying.
relationships. Like all messages, qualitatively interpersonal communication has both content and relational dimensions. Intimacy is a special dimension of interpersonal communication scholars have explored some forces that shape
interpersonal relationships. 

Developmental models describe how communication in relationships changes over time. 

Dialectical models describe forces that always operate in relationships. 

Developmental models describe forces that always operate in relationships. 

Developmental models describe forces that always operate in relationships.
relationships. People disclose (or withhold) personal information for a variety of reasons. Men and women sometimes value and express intimacy differently. Models can help us understand how self-disclosure operates. Cultural background influences how we communicate intimacy.
first look at the vitally important topic of interpersonal relationship we are seeking with them. We will begin by exploring what kinds of communication make a relationship interpersonal. Next, we will look at some ways—both subtle and obvious—that we show others how we regard them and what kind of relationship we are seeking with them. We will go on to explore two
approaches that characterize how communication operates throughout the lifetime of relationships. Finally, we will look at the role of self-disclosure in interpersonal communication? How does it differ from other types of interaction? When and how
are interpersonal messages communication Interpersonal? The most obvious way to define interpersonal communication is by looking at the number of people involved. In this sense we could say that all communication between two people, or contextually interpersonal communication, is interpersonal. In
many ways, contextually interpersonal communication is different from the kind that goes on in other contexts, such as the kinds of small groups discussed in Chapters 8 and 9 of this book. For example, unlike threesomes and other groups, dyads are complete and cannot be subdivided. If one person withdraws from the other, the relationship is
online communication a poor substitute for face-toface contact,or is it a rich medium for developing close personal relationships? In one survey, approximately 25 percent of the respondents who used the Internet regularly reported spending less time talking in person and on the phone with friends and family members. 2 Another survey revealed that
lacks quality 4 Writing (online, of course) in CMC Magazine, Brittney G.Chenault summarized research concluding that e-mail, chat rooms, Internet newsgroups, and computer conferences can and do allow electronic correspondents to develop a degree of closeness similar to what can be achieved in person. 5 Research confirms the claim that mediated
innermost thoughts and feelings tionships has grown since they started to use the Internet users and nonusers), 72 percent of the Internet users had communicated with a relative or a friend within the past day, compared with 61 percent for nonusers.6 Surprisingly, the
Internet users were also more likely to have phoned friends and relatives. Even more significant than the amount of communications with family, and 66 percent said that their contact with friends had increased because of e-mail. Among women
impact" on their ability to communicate more with family members and make new friends. Among women, the rate of satisfaction was even high: 60 percent reported better contact with family and 61 percent with family and 61 percent with family and 61 percent with friends. For some people, the lack of immediacy in online communication makes it easier to build close relationships. Sociolinguist Deborah
Tannen describes a situation where e-mail enhanced a relationship that wouldn't have developed to the same degree in person: E-mail deepened my friendship with Ralph. Though his office was next to mine, we rarely had extended conversations because he is shy. Face to face he mumbled so I could barely tell he was speaking. But when we both got
weakening opportunities for communication, CMC provides rich opportunities for establishing and maintaining relationships. An Internet connection makes it possible to send and receive messages at any time of the day or night from people around the world. While face-to-face contact is impossible and telephone conversations difficult due to cost or
time differences, computer-mediated messages are cheap, quick, and easy. Content and Relational Messages Virtually every verbal statement contains two kinds of messages. Content messages, which focus on the subject being discussed, are the most obvious. The content of such statement contains two kinds of messages are cheap, quick, and easy. Content messages are cheap, quick, and
night" is obvious. Content messages aren't the only kind that are exchanged when two people interact. In addition, virtually all communication—both verbal and nonverbal— contains relational messages express communicators'feelings and attitudes
involving one or more dimensions: AFFINITY One dimension of relational communication is affinity: the degree to which people like or appreciate one another. As the photo on the next page shows, you can get a good idea of how much each character likes the other, even if you don't know what is being discussed on the content level. 184-
child tremendously without respecting her. Likewise, you could respect a boss or teacher's talents without liking him. Respect is a tremendously important and often overlooked ingredient in satisfying relationships. It is a better predictor of relational satisfaction than liking, or even loving.11 IMMEDIACY Communication scholars use the term
immediacy to describe the degree of interest and attraction we feel toward and communicate to others. Immediacy; low affinity and low immediacy; high affinity and low immediacy; low affinity and low immediacy; and low immediacy; and low immediacy; and low immediacy; low affinity and low immediacy; low affinity and low immediacy; and low immediacy; low affinity and low affinity an
conditions do you think exists in the photo on this page? CONTROL In every conversation and every relationship there is some distribution of control won't
cause problems as long as everyone involved accepts that arrangement. Struggles arise, though, when people disagree on how control should be distributed in their relationship. You can get a feeling for how relational messages operate in everyday life by recalling the statements at the beginning of this section. Imagine two ways of saying "It's your
turn to do the dishes": one that is demanding and another that is matter-of-fact. Notice how the different nonverbal messages make statements about how the sender views control in this part of the relationship. The demanding tone says, in effect, "I have a right to tell you what to do around the house," whereas the matter-of-fact one suggests, "I'm just
conscious of the relational messages that bombard us every day. Sometimes we are unaware of relational messages because they match our belief about the amount of respect, immediacy, control, and affinity that is appropriate. For example, you probably won't be offended if your boss tells you to do a certain job, because you agree that supervisors
have the right to direct employees. In other cases, however, conflicts arise over relational messages even though content is not disputed. If your boss delivers the order in a condescending, sarcastic, or abusive tone of voice, you probably will be offended. Your complaint wouldn't be with the order itself but rather with the way it was delivered. "I may
work for this company," 191 184-225 Ch06 Adler 192 2/28/05 PART TWO 9:46 AM Page 192 INTERPERSONAL COMMUNICATION CULTURAL IDIOM on the one hand: from the other point of view on the other point of view on the other point of view on the other hand: from the other point of view on the other point of view on the other point of view on the other hand: from the other point of view on the other point of
messages communicated? As the boss-employee example suggests, they are usually expressed nonverbally. To test this fact for yourself, imagine how you could act while saying, "Can you help me for a minute?" in a way that communicates each of the following attitudes: superiority helplessness aloofness sexual desire friendliness irritation Although
nonverbal behaviors are a good source of relational messages, remember that they are ambiguous. The sharp tone you take as an attempt to ignore your ideas might be due to fatigue, and the interruption you take as an attempt to ignore your ideas might be due to fatigue, and the interruption you take as an attempt to ignore your ideas might be due to fatigue, and the interruption you take as an attempt to ignore your ideas might be due to fatigue, and the interruption you take as an attempt to ignore your ideas might be due to fatigue, and the interruption you take as an attempt to ignore your ideas might be due to fatigue, and the interruption you take as an attempt to ignore your ideas might be a sign of pressure that has nothing to do with you. Before you jump to conclusions about relational clues, it's a sign of pressure that has nothing to do with you.
good idea to practice the skill of perception checking that you learned in Chapter 2: "When you use that tone of voice to tell me it's my turn to do the dishes, I get the idea you're mad at me. Is that right?" If your interpretation was indeed correct, you can talk about the problem. On the other hand, if you were overreacting, the perception check can
prevent a needless fight. Metacommunication As the preceding example of perception checking shows, not all relational messages are nonverbal. Social scientists use the term metacommunication about communication whenever we discuss a communication about communication about communication.
relationship with others, we are metacommunicating: "It sounds like you're angry at me" or "I appreciate how honest you've been." Metacommunication is an essential ingredient in successful relationships. Sooner or later there are times when it becomes necessary to talk about what is going on between you and the other person. The ability to focus
couple bickering because one partner wants to watch television, whereas the other wants to talk. Imagine how much better the chances of a positive outcome would be if they used metacommunication to examine the relational problems that were behind their quarrel: "Look, it's not the TV watching itself that bothers me. It's that I imagine you watch so
much because you're mad at me or bored. Are you feeling bad about us?" Metacommunication isn't just a tool for handling problems. It is also a way to reinforce the good aspects of a relationship: "I really appreciate it when you compliment me about my work in front of the boss." Comments like this serve two functions: First, they let others know that
relationship is working because we can still talk things out." On the other hand, 184-225 Ch06 Adler 2/28/05 9:46 AM Page 193 CHAPTER 6 UNDERSTANDING INTERPERSONAL RELATIONSHIPS your desire to focus on the relationship might look like a bad omen— "Our relationship isn't working if we have to keep talking it over." Furthermore,
metacommunication does involve a certain degree of analysis ("It seems like you're angry at me"), and some people resent being analyzed. These cautions don't mean verbal metacommunication is a bad idea. They do suggest, though, that it's a tool that needs to be used carefully. Before I built a wall I'd ask to know What I was walling in or walling out
And to whom I was like to give offense. Something there is that doesn't love a mixture of personal and interpersonal communication. We alternate between a "we" and a "me" orientation, sometimes focusing on connecting
with others and at other times focusing on our own needs and interests. In the next few pages we will examine how our communication is affected by these apparently conflicting drives for intimacy and distance. This definition
suggests that the key element of intimacy is closeness, one element that "ordinary people" have reported as characterizing their intimacy. In truth, intimacy can have several qualities. The first is physical. Even before birth, the developing fetus
experiences a kind of physical closeness with its mother that will never happen again, "floating in a warm fluid, curling inside a total embrace, swaying to the undulations of the moving body and hearing the beat of the pulsing heart." 14 As they grow up, fortunate children are continually nourished by physical intimacy: being rocked, fed, hugged, and hearing the beat of the moving body and hearing the beat of the beat of the moving body and hearing the beat of the beat of the beat
held. As we grow older, the opportunities for physical intimacy are less regular, but still possible and important. Some, but by no means all, physical intimacy is sexual. In one survey, only one-quarter of the respondents (who were college students) stated that intimacy necessarily contained a romantic or sexual dimension. 15 Other forms of physical intimacy is sexual.
intimacy include affectionate hugs, kisses, and even struggles. Companions who have endured physical challenges together—in athletics or emergencies, for example—form a bond that can last a lifetime. In other cases, intimacy, of course. Talking about next week's
midterm with your professor or classmates isn't likely to forge strong relational bonds. But when you engage another person in an exchange of important ideas, a kind of closeness develops that can be powerful and exciting. A third quality of intimacy is emotion: exchanging important feelings. This chapter will offer several guidelines for disclosing
your thoughts and feelings to 193 184-225_Ch06_Adler 194 2/28/05 PART TWO 9:46 AM Page 194 INTERPERSONAL COMMUNICATION CULTURAL IDIOM fool around: spend time joking others. If you follow those guidelines, you will probably recognize a qualitative change in your relationships. If we define intimacy as being close to another person
then shared activities can provide another way to achieve this state. Shared activities can include everything from working side by side at a job to meeting regularly for exercise workouts. Although shared activities are no guarantee of intimacy, people who spend time together can develop unique ways of relating that transform the relationship from
an impersonal one that could be done with anybody to one with interpersonal qualities. For example, both friendships are often characterized by several forms of play. Partners invent private codes, fool around by acting like other people, tease one another, and play games—everything from having punning contests to arm
wrestling.16 Some intimate relationships exhibit all four qualities: physical intimate, intellectual exchanges, emotional disclosure, and shared activities. Other intimate relationships exhibit all four qualities: physical intimate, in some cases
even family members develop smooth but relatively impersonal relationships. Not even the closest relationships always operate at the highest level of intimacy. At some times you might share your feelings about one
topic and stay more aloof in another one. The same principle holds for physical intimacy, which waxes and wanes in most relationships. The dialectical view of relationships. Male and Female Intimacy Styles Until recently most social
scientists believed that women are better at developing and maintaining intimate relationships than men.17 This belief grew from the assumption that the disclosure of personal information is the most important ingredient of intimacy. Most research does show that women (taken as a group, of course) are more willing to share their thoughts and
feelings than men.18 In terms of the amount and depth of information exchanged, female-female relationships are at the top of the disclosure list. Male-female relationships come in second, Source: Reprinted by special permission of King Features Syndicate. 184-225_Ch06_Adler 2/28/05 9:46 AM Page 195 CHAPTER 6 UNDERSTANDING
INTERPERSONAL RELATIONSHIPS whereas relationships between men have less disclosure than any other type. At every age, women disclose more than men, and the information, men are less likely to share
positive feelings.19 Through the mid-1980s many social scientists interpreted the relative lack of male self-disclosure as a sign that men are unwilling or even unable to develop close relationships. Some argued that the female trait of disclosing personal information and feelings makes them more "emotionally mature" and "interpersonally competent
than men. Personal growth programs and self-help books urge men to achieve closeness by learning to open up and share their feelings. Scholarship conducted in roughly the last decade has begun to show that malefemale differences aren't as great as they seem, 20 and emotional expression isn't the only way to develop close relationships. Unlike
women who value personal talk, men grow close to one another by doing things. In one study more than 75 percent of the men surveyed said that through shared activities they "grew on one another," developed feelings of
difference between male and female measures of intimacy helps explain some of the stresses and misunderstandings that can arise between the sexes. For example, a woman who looks for emotional disclosure as a measure of affection may overlook an "inexpressive" man's efforts to show he cares by doing favors or spending time together. Fixing a
leaky faucet or taking a hike may look like ways to avoid getting close, but to the man who proposes them, they may be measures of affection and bids for intimacy. Likewise, differing ideas about the timing and meaning of sex can lead to misunderstandings. Whereas many women think of sex as a way to express intimacy that has already developed,
men are more likely to see it as a way to create that intimacy.22 In this sense, the man who encourages sex early in a relationship or after a fight may not just be a testosterone-crazed lecher: He may view the shared activity as a way to build closeness. By contrast, the woman who views personal talk as the pathway to intimacy may resist the idea of
physical closeness before the emotional side of the relationship has been discussed. Cultural Influences on Intimacy The notion of how much intimacy is desirable and how to express it varies from one culture to another.23 In one study, researchers asked residents of Britain, Japan, Hong Kong, and Italy to describe their use of thirty-three rules that
governed interaction in a wide range of communication behaviors: everything from the use of humor to hand shaking to the management of money.24 The results showed that the greatest differences between Asian and European cultures focused on the rules for dealing with intimacy: showing emotions, expressing affection in public, engaging in
AM Page 196 INTERPERSONAL COMMUNICATION UNDERSTANDING DIVERSITY INTIMACY THROUGH THE AGES The concept of intimacy—at least as we think of it—is a relatively new one. A time traveler who visited almost any era before the nineteenth century would not find much resembling today's notions of intimacy in either the physical or
emotional sense. If physical intimacy meant only close proximity and little privacy, then it was more common in the past than it is today, especially in less-privileged social classes. In many preindustrial societies, families usually used a common room for bathing, eating, and sleeping. Often a household lacked even a bed, and in one writer's phrase, an
worry about feelings. The family was primarily an economic unit, with members bound together by the mutual task of survival. In seventeenthcentury America and England, the customary level of communication among spouses was rather formal: not much different from the way acquaintances or neighbors spoke with one another. One might regard
husband or wife with affection, but the concept of romantic love as we know it did not flourish until the nineteenth-century bourgeois society, extreme differences between public and private behavior emerged. In public, privacy was the rule. It was considered selfish to burden others with details of your personal life. By
sharing one's deepest feelings strengthen the marriage bond, but also it provided support that was lacking in the restrained, private public world. Emotional intimacy may have become valued in nineteenth-century bourgeois society, but sexual relationships still were characterized by repression. In the early years of the century, "petting" was
considered unacceptable. By the 1870s, sexual restraint had reached a peak: Some popular marriage manuals recommended female frigidity "as a virtue to be cultivated, and sexual expression that would be considered commonplace today. One
doctor even referred to his patient as a "virgin nymphomaniac." The concept of emotional intimacy has also changed in the last hundred years. The nineteenth-century approval of selfdisclosure has expanded considerably, so that the distinction between public and private relationships is a fuzzy one. As etiquette writer "Miss Manners" points out, we
live in a time when waiters introduce themselves by name and sign our checks with a personal "thank you" and when clerks urge us to "have a nice day." In contemporary society it is common to share details of one's personal life with new acquaintances or even total strangers—behavior that would have astonished and offended our great-
grandparents. Understanding the changing concept of intimacy can help show us that notions we take for granted are not universal and are often shaped by economic and social conditions. A sense of perspective can also give us an appreciation for communication practices that are a part of everyday life and give us a sense of other possibilities. The
material in this reading was drawn from several sources: Stephanie Coontz, The Social Origins of Private Life (New York: Verso, 1988); John F. Kasson, Rudeness and Civility: Manners in Nineteenth-Century Urban America (New York: Hill and Wang, 1990); and Sarah Trenholm and Arthur Jensen, "The Guarded Self: Toward a Social History of
Interpersonal Styles," a paper presented to the Speech Communication Association's meeting in San Juan, Puerto Rico, December 1990. ships, whereas Americans look for more intimacy in romantic relationships with a boy- or girlfriend, fiancée, or spouse.25 In some collectivist cultures such as Taiwan and Japan there is an especially great difference
                                     icate with members of their "ingroups" (such as family and close friends) and with those they view as outsiders. 26 They generally do not reach out to strangers, often waiting until they are properly 184-225 Ch06 Adler 2/28/05 9:46 AM Page 197 CHAPTER 6 UNDERSTANDING INTERPERSONAL RELATIONSHIPS
introduced before entering into a conversation. Once introduced, they address outsiders with a degree of formality. They go to extremes to hide unfavorable information about in-group members from outsiders, on the principle that one doesn't wash dirty laundry in public. By contrast, members of more individualistic cultures like the United States and
Australia make less of a distinction between personal relationships and casual ones. They act more familiar with strangers and disclose more personal information, making them excellent "cocktail party conversationalists." Social psychologist Kurt Lewin captured the difference nicely when he noted that Americans are easy to meet but difficult to get to
know, whereas Germans are difficult to meet but then easy to know well.27 Within American culture, intimacy varies from one group to another. For example, working-class black men are much more disclosing than their white counterparts.28 By contrast, upwardly mobile black men communicate more like white men with the same social agenda,
disclosing less with their male friends. RELATIONAL DEVELOPMENT AND MAINTENANCE Qualitatively interpersonal relationships aren't stable. Instead, they are constantly changing. Communication scholars have described the way relationships aren't stable. Instead, they are constantly changing. Communication scholars have described the way relationships aren't stable. Instead, they are constantly changing. Communication scholars have described the way relationships aren't stable. Instead, they are constantly changing. Instead, they are constantly changing.
the best-known explanations of how communication operates in relationships was created by Mark Knapp, whose developmental model broke down the rise and fall of relationships into ten stages, contained in the two broad phases of "coming apart." 29 Other researchers have suggested that any model of relational
communication ought to contain a third part of relational maintenance—communication aimed at keeping relationships operating smoothly and satisfactorily.30 Figure 6-1 shows how Knapp's ten stages fit into this three-part view of relational maintenance Bonding Differentiating Integrating Coming together Intensifying
Experimenting Initiating Figure 6-1 Stages of Relational Development Circumscribing Stagnating Coming apart Avoiding Terminating 197 CULTURAL IDIOM wash dirty laundry in public: disclose personal and private problems and concerns beyond one's family or group 184-225 Ch06 Adler 198 2/28/05 PART TWO 9:46 AM Page 198
INTERPERSONAL COMMUNICATION CULTURAL IDIOM to pick up: to make an acquaintance with sexual purposes in mind "small talk": unimportant or trivial conversation The following stages are especially descriptive of intimate, romantic relationships, such as families, would follow
different paths. Some valuable relationships don't require a high level of intimacy. They are based on other, equally important foundations: career activities, shared political interests, and religion, to mention just a few. 31 INITIATING The stage of initiation involves the initial making of contact with another person. Knapp restricts this stage to
conversation openers, both in initial contacts and in contacts with acquaintances: "Nice to meet you," "How's it going?" and so on. Although an initial encounter is necessary to the succeeding interaction, its importance is overemphasized in books advising how to pick up men and women. These books suggest fail-proof openers ranging from "Excuse
me, I'm from out of town, and I was wondering what people do around here at night" to "How long do you cook a leg of lamb?" Whatever your first impressions and presenting yourself as interested in the other person. Initiating relationships in can be particularly
hard for people who are shy. Making contact via the Internet can be helpful for people who have a hard time conversing in person. One study of an online dating service found that participants who identified themselves as shy expressed a greater appreciation for the system's anonymous, nonthreatening environment than did non-shy users. 32 The
researchers found that many shy users employed the online service specifically to help overcome their inhibitions about initiating relationships in face-to-face settings. EXPERIMENTING In the stage of experimenting, the conversation develops as the people get acquainted by making "small talk." We ask: "Where are you from?" or "What do you do?"
or "Do you know Josephine Mandoza? She lives in San Francisco, too." Though small talk might seem meaningless, Knapp points out that it serves four purposes:
of a current relationship. It provides a safe procedure for indicating who we are and how another can come to know us better (reduction of uncertainty). It allows us to maintain a sense of community with our fellow human beings. The relationship during this stage is generally pleasant and uncertainty).
may last ten minutes or ten years. The willingness to pursue relationships with strangers is partly a matter of personal style. Some people are outgoing and others more shy. But culture also plays a role in orientations to newcomers, especially ones from a different background. Research suggests that members of some cultures—Chinese and
Japanese, for example—are more cautious in their first encounters with strangers and make more assumptions about them based on their backgrounds appear unfriendly, when in fact they are simply operating by a set of rules different from
those common in the outgoing United States. 184-225_Ch06_Adler 2/28/05 9:46 AM Page 199 CHAPTER 6 UNDERSTANDING INTERPERSONAL RELATIONSHIPS INTENSIFYING At the next stage the kind of truly interpersonal relationship defined earlier in this chapter begins to develop. Several changes in communication patterns occur during
intensifying. The expression of feelings toward the other becomes more communication to discuss the state of the relationship. More often they use less-direct
methods of communication: spending an increasing amount of time together, asking for support from one another, doing favors for the partner, giving tokens of affection, hinting and flirting, expressing feelings nonverbally, getting to know the partner from one another, doing favors for the partner, giving tokens of affection, hinting and flirting, expressing feelings nonverbally, getting to know the partner from one another, doing favors for the partner from one another, doing favors for the partner from one another from one an
this stage than in either earlier or later ones.35 Other changes mark the intensifying stage. Forms of address become more familiar. The parties begin to see themselves as "we" instead of separate individuals. It is during the intensifying stage that we begin to see themselves as "we" instead of separate individuals. It is during the intensifying stage that we begin to see themselves as "we" instead of separate individuals. best thing that's happened to me in a long time." INTEGRATING As the relationship strengthens, the parties begin to take on an identity as a social unit. Invitations begin to take on an identity as a social unit. Invitations begin to take on an identity as a social unit. Invitations begin to take on an identity as a social unit. Invitations begin to take on each other's commitments: "Sure, we'll spend Thanksgiving with your family." Common
property may begin to be designated—our apartment, our car, our song.36 Partners develop their own rituals for everything from expressing intimacy to handling daily routines.37 They even begin to speak alike, using common words and sentence patterns.38 In this sense, the integration stage is a time when we give up some characteristics of our song.36 Partners develop their own rituals for everything from expressing intimacy to handling daily routines.37 They even begin to speak alike, using common words and sentence patterns.38 In this sense, the integration stage is a time when we give up some characteristics of our song.36 Partners develop their own rituals for everything from expressing intimacy to handling daily routines.37 They even begin to speak alike, using common words and sentence patterns.38 In this sense, the integration stage is a time when we give up some characteristics of our speak alike, using common words and sentence patterns.38 In this sense, the integration stage is a time when we give up some characteristics of our speak alike, using common words and sentence patterns.38 In this sense, the integral of the patterns are speak alike, using common words and sentence patterns.38 In this sense, the integral of the patterns are speak alike, using the patte
old selves and become different people. As we become more integrated with others, our sense of obligation to them grows. 39 We feel obliged to provide a variety of resources such as class notes and money, whether or not the other person asks for them. When intimates do make requests of one another, they are relatively straightforward. Gone are
the elaborate explanations, inducements, and apologies. In short, partners in an integrated relationship expect more from one another than they do in less-intimate associations. BONDING During the bonding stage, the parties make symbolic public gestures to show the world that their relationship exists. The most common form of bonding in romantic
relationships is a wedding ceremony and the legal ties that come with it. Bonding generates social support for the relationship. Up to now the relationship may have developed at a steady pace: Experimenting
gradually moved into intensifying and then into integrating. Now, however, there is a spurt of commitment. The public display and declaration of exclusivity make this a critical period in the relationships don't have to be romantic to have a bonding stage. Business contracts form a bond, as does being initiated into a fraternity or sorority
Acts like these "officialize" a relationship and involve a measure of public commitment. 199 184-225 Ch06 Adler 200 2/28/05 PART TWO 9:46 AM Page 200 INTERPERSONAL COMMUNICATION DIFFERENTIATING Now that the two people have formed this commonalty, they need to reestablish individual identities. This is the point where the "hold
me tight" orientation that has existed shifts, and "put me down" messages begin to occur. Partners use a variety of strategies to gain privacy from one another.40 Sometimes they confront the other party directly, explaining that topic, or
leaving the room. Differentiation is likely to occur when a relationship begins to experience, however. People need to be individuals as well as parts of a relationship, and differentiation is a necessary step toward autonomy. The key to successful differentiation is
maintaining a commitment to the relationship while creating the space for being an individual as well. CIRCUMSCRIBING So far we have been looking at the growth of relationships. Although some reach a plateau of development, going on successfully for as long as a lifetime, others pass through several stages of decline and dissolution. In the
circumscribing stage, communication between members decreases in quantity and quality. Restrictions and restraints characterize this stage, and dynamic communication becomes static. Rather than discuss a disagreement (which requires some degree of energy on both parts), members opt for withdrawal: either mental (silence or daydreaming and
fantasizing) or physical (where people spend less time together). Circumscribing doesn't involve total avoidance, which comes later. Rather, it entails a certain shrinking of interest and commitment. STAGNATING If circumscribing doesn't involve total avoidance, which comes later. Rather, it entails a certain shrinking of interest and commitment.
feeling. No growth occurs. The relationship is a shadow of its former self. We see stagnation in many workers who have lost enthusiasm for their job yet continue to go through the motions for years. The same sad event occurs for some couples 184-225 Ch06 Adler 2/28/05 9:46 AM Page 201 CHAPTER 6 UNDERSTANDING INTERPERSONAL
RELATIONSHIPS who unenthusiastically have the same conversations, see the same people, and follow the same people 
lately and can't see you"), and sometimes it is done directly ("Please don't call me; I don't want to see you now"). In either case, by this point the handwriting . . . is clearly on the wall: an indication or foretelling of an unfortunate message bitter jabs: unkind
comments TERMINATING Characteristics of this final stage include summary dialogues about where the relationship may end with a cordial dinner, a note left on the kitchen table, a phone call, or a legal document stating the dissolution. Depending on each person's feelings, this stage can be
quite short, or it may be drawn out over time, with bitter jabs at one another. The deterioration of a relationship from bonding to circumscribing, stagnating, and avoiding isn't inevitable. One of the key differences between marriages that end in separation and those that are restored to their former intimacy is the communication that occurs when the
partners are unsatisfied. 41 Unsuccessful couples deal with their problems by avoidance indirectness, and less involvement with one another with their concerns and spend time and effort negotiating solutions to their problems.
Relationships don't always move toward termination in a straight line. Rather, they take a back-and-forth pattern, where the trend is toward dissolution. 42 Regardless of how long it takes, termination doesn't have to be totally negative. Understanding each other's investments in the relationships and needs for personal growth may dilute the hard
feelings. In fact, many relationships aren't so much terminated as redefined. A divorced couple, for example, may find new, less intimate ways to relate to each other. CRITICAL THINKING PROBE STAGES IN NONROMANTIC RELATIONSHIPS Knapp's model of relational development and decline offers a good description of communication stages in
traditional romantic relationships. Some critics have argued that it doesn't characterize other sorts of relationships so well. Identify your position in this debate by following these steps: 1. Explain how well (or poorly) the model describes one other type of relationships. Some critics have argued that it doesn't characterize other sorts of relationships so well. Identify your position in this debate by following these steps: 1. Explain how well (or poorly) the model describes one other type of relationships.
another relational context of your choosing. 2. Construct a model describing communication stages in the relationship type you just identified. How does this model differ from Knapp's? A Dialectical Perspective Developmental models like the one described in the preceding pages suggest that communication differs in important ways at various points
in the life of a relationship. According to these stage-related models, the kinds of interaction that 184-225 Ch06 Adler 202 2/28/05 PART TWO 9:46 AM Page 202 INTERPERSONAL COMMUNICATION [Porcupines] huddle together for warmth, but their sharp quills prick each other, so they pull away. But then they get cold. They have to keep
adjusting their closeness and distance to keep from freezing and from getting pricked by their fellow porcupines—the source of both comfort and pain. We need to get close to each other to preserve our independence, so others don't
impose on or engulf us. This duality reflects the human condition. We are individual and social creatures. We need other people to survive, but we want to survive as individuals. Deborah Tannen That's Not What I Meant! happen during differentiating, experimenting, or intensifying are different from the interaction that occurs during differentiating,
circumscribing, or avoiding. Not all theorists agree that a stage-related model is the best way to explain interaction in relationships. Some suggest that communicators grapple with the same kinds of challenges whether a relationship is brand new or has lasted decades. They argue that communicators seek important but inherently incompatible goals
throughout virtually all of their relationships. This dialectical model suggests that struggling to achieve these goals creates dialectical tensions: conflicts that arise when two opposing or incompatible forces exist simultaneously. In recent years, communication scholars have identified the dialectical tensions that make successful communication
challenging.43 They suggest that the struggle to manage these dialectical tensions creates the most powerful dynamics in relational communication. In the following pages we will discuss three powerful dynamics in relational communication. In the following pages we will discuss three powerful dynamics in relational communication. In the following pages we will discuss three powerful dynamics in relational communication.
same time, we are unwilling to sacrifice our entire identity to even the most satisfying relationship. The conflicting desires for connection and independence are embodied in the connection and independence are embodied in the connection and independence are embodied in the connection.
personal needs. 44 Some of the most common reasons for relational breakups involve failure of partners to satisfy one another's needs for connection: "We had different needs." But other relational complaints involve excessive demands for connection: "I was feeling
```

```
trapped"; "I needed freedom." The levels of connection and autonomy that we seek can change over time. In his book Intimate Behavior, Desmond Morris suggests that each of us repeatedly goes through three stages: "Hold me tight," "Put me down," and "Leave me alone." 45 This cycle becomes apparent in the first years of life when children move
from the "hold me tight" stage that characterizes infancy into a new "put me down" stage of exploring the world by crawling, walking, touching, and tasting. This move for independence isn't all in one direction: The same three-year-old who insists "I can do it myself" in August may cling to parents on the first day of preschool in September. As
children grow into adolescents, the "leave me alone" orientation becomes apparent. Teenagers who used to happily spend time with their parents now may groan at the thought of a family vacation or even the notion of sitting down at the dinner table each evening. More time is spent with friends or alone. Although this time can be painful for parents,
most developmental experts recognize it as a necessary stage in moving from childhood to adulthood. As the need for independence from family grows, adolescents take care of their "hold me tight" needs by associating with their peers. Friendships during the teenage years are vital, and the level of closeness with contemporaries can be a barometer
of happiness. This is the time when physical intimacy becomes an option, and sexual exploration may provide a new way of achieving closeness. In adult relationships, the same cycle of intimacy becomes an option, and sexual exploration may provide a new way of achieving closeness. In adult relationships, the same cycle of intimacy becomes an option, and sexual exploration may provide a new way of achieving closeness. In adult relationships, the same cycle of intimacy becomes an option, and sexual exploration may provide a new way of achieving closeness.
autonomy can manifest itself in a number of ways, such as the desire to make friends or engage in activities 184-225_Ch06 Adler 2/28/05 9:46 AM Page 203 CHAPTER 6 UNDERSTANDING INTERPERSONAL RELATIONSHIPS 203 that don't include the spouse, or the need to make a career move that might disrupt the relationship. As the discussion of
relational stages later in this chapter will explain, this movement from closeness to autonomy may lead to the breakup of relationships; but it can also be part of a cycle that redefines the relationship in a new form that can recapture or even surpass the intimacy that existed in the past. PREDICTABILITY VERSUS NOVELTY Stability is an important
need in relationships, but too much of it can lead to feelings of staleness. The predictability novelty dialectic reflects this tension. Humorist Dave Barry exaggerates only slightly when he talks about the boredom that can come when husbands and wives know each other too well: After a decade or so of marriage, you know everything about your spouse
every habit and opinion and twitch and tic and minor skin growth. You could write a seventeen-pound book solely about the way your spouse from the sound of his or her chewing—but it
tends to lower the passion level of a relationship. 46 OPENNESS VERSUS PRIVACY As Chapter 1 explained, disclosure is one characteristic of interpersonal relationships. Yet, along with the need for intimacy, we have an equally important need to maintain some space between ourselves and others. These sometimes conflicting drives create the
opennessprivacy dialectic. Even the strongest interpersonal relationships require some distance. On a short-term basis, the desire for closeness waxes and wanes. Lovers may go through periods of little physical contact. Friends have times
of high disclosure where they share almost every feeling and idea and then disengage for days, months, or even longer. Figure 6-2 illustrates some patterns of variation in openness uncovered in a study of college students' communication "And do you, Rebecca, promise to make love only to Richard, month after month, year after year, and decade
after decade, until one of you is dead?" Source: © The New Yorker Collection 1997 Tom Cheney from cartoonbank.com. All Rights Reserved. Although too much familiarity can lead to the risk of boredom and stagnation, nobody wants a completely unpredictable relational partner. Too many surprises can threaten the foundations upon which the
relationship is based ("You're not the person I married!"). The challenge for communicators is to juggle the desire for predictability with the need for novelty that keeps the relationship fresh and interesting. People differ in their need for novelty that keeps the relationship fresh and interesting. People differ in their need for novelty that keeps the relationship fresh and interesting.
number of strategies people can use to manage these contradictory drives. 184-225 Ch06 Adler PART TWO 9:46 AM Page 204 INTERPERSONAL COMMUNICATION Openness in a Stable Relationship 7 Openness

show a definite pattern of fluctuation between disclosure and privacy in every stage of the relationships. STRATEGIES FOR MANAGING DIALECTICAL TENSIONS Managing the dialectical tensions outlined in these pages presents communication challenges. There are a number of strategies by which these challenges can be managed. 48 One of the
least functional is denial that tensions exist. People in denial insist that "everything is fine," that the inevitable tugs of dialectical tensions really aren't a problem. For example, coworkers who claim that they're always happy to be members of the team and never see conflicts between their personal goals and the organization's are probably operating
in a state of denial. Disorientation is another response to dialectical tensions. In this response, communicators feel so overwhelmed and helpless that they are unable to confront their problems. In the face of dialectical tensions they might fight, freeze, or even leave the relationship. A couple who discover soon after the honeymoon that living a
 "happily ever after" conflict-free life is impossible might become so terrified that they would come to view their marriage as a mistake. In the strategy of selection, communicators respond to one end of the dialectical spectrum and ignore the other. For example, a couLove one another, but make not a bond of love: ple caught between the conflicting
desires for Let it rather be a moving sea between the shores of your souls. stability and novelty might find their struggle Fill each other's cup but drink not from one cup. to change too difficult to manage and choose Give one another of your bread but eat not of the same loaf, to stick with predictable, if unexciting, patSing and dance together and be
joyous, but let each one of you be alone, terns of relating to one another. Even as the strings of a lute are alone though they quiver with the same music. Communicators choose the strategy of alKahlil Gibran ternation to alternate between one end of the The Prophet dialectical spectrum at some times and the 184-225 Ch06 Adler 2/28/05 9:46 AM
Page 205 CHAPTER 6 UNDERSTANDING INTERPERSONAL RELATIONSHIPS other end at other times when they spend a large amount of time together and other times when they spend a large amount of time together and other times. Friends, for example, might manage the autonomyconnection dialectic by alternating between times when they spend a large amount of time together and other times when they spend a large amount of time together and other times. Friends, for example, might manage the autonomyconnection dialectic by alternating between times when they spend a large amount of time together and other times.
which partners compartmentalize different areas of their relationship. For example, a couple might manage the openness-closedness dialectic by sharing almost all their feelings about mutual friends with one another but keep certain parts of their past romantic histories private. Moderation is a sixth strategy. This strategy is characterized by
compromises, in which communicators choose to back off from expressing either end of the dialectical spectrum. Adult children, for example, might manage the revelation-concealment dialectic with their inquisitive parents by answering some (though not all) unwelcome parental questions. Communicators can also respond to dialectical challenges by
reframing them in terms that redefine the situation so that the apparent contradiction disappears. Consider a couple who wince when their friends characterize them as a "perfect couple." On one hand, they enjoy the admiration that comes with this
identity. By pointing out to their friends that "ideal couples" aren't always blissfully happy, they can both be themselves and keep the admiration—acknowledging that dialectical tensions will never disappear, accepting or even embracing the challenges they present. The
metaphorical view of relational life as a kind of roller coaster reflects this orientation, and communicators who use reaffirmation view dialectical tensions as part of the ride. Characteristics of Relational Development and Maintenance Whether you analyze a relationship in terms of stages or dialectical dynamics, two characteristics are true of every
interpersonal relationship. As you read about each, consider how it applies to your own experience. RELATIONSHIPS ARE CONSTANTLY CHANGING Relationships are certainly not doomed to deteriorate. But even the strongest ones are rarely stable for long periods of time. In fairy tales a couple may live "happily ever after," but in real life this sort
of equilibrium is less common. Consider a husband and wife who have been married for some time. Although they have formally bonded, their relationship will probably shift from one dimension of a relational dialectic to another, and forward or backward along the spectrum of stages. Sometimes the partners will feel the need to differentiate from one
another, and at other times they will seek intimacy. Sometimes they will feel secure in the predictable patterns they have established, and at other times one or both will be hungry for novelty. The relationship may become more circumscribed, or even stagnant. From this point the marriage may fail, but this fate isn't certain. With effort, the partners
may move from the stage of stagnating to experimenting, or from circumscribing to intensifying. Communication theorist Richard Conville describes the constantly changing, evolving nature of relationships as a cycle in which partners move through a se- 205 CULTURAL IDIOM on the one hand: from one point of view on the other hand: from the

this cycle, partners move from security (integration, in Knapp's terminology) to disintegration (differentiating) to a new level of security. This process repeats itself again and again. on grat Aliena tion D i s i nte io n grat D i si n atio tegr n MOVEMENT IS ALWAYS TO A NEW
PLACE Even though a relationship may move back to a stage it has experienced before, it will never be the same. For example, most healthy long-term relationships will go through several phases of experimenting, when the partners try out new ways of behaving with one another. Though each phase is characterized by the same general features, the
specifics will feel different each time. As you learned in Chapter 1, communication is irreversible. Partners can never go back to "the way things were." Sometimes this fact may lead to regrets: It's impossible to take back a cruel comment or forget a crisis. On the other hand, the irreversibility of communication can make relationships exciting,
because it lessens the chance for boredom. A Helical Model of Relational Cycles SELF-DISCLOSURE IN INTERPERSONAL RELATIONSHIPS Source: The New Yorker Collection 2003 Leo Cullum from cartoonbank.com. All Rights Reserved. "We don't have any secrets," some people proudly claim. Opening up certainly is important. Earlier in this
chapter you learned that one ingredient in qualitatively interpersonal relationships is disclosure. You've also read that we find others more attractive when they share certain private information with us. Given the obvious importance of self-disclosure, we need to take a closer look at the subject. Just what is it? When is it desirable? How can it best be
done? The best place to begin is with a definition. Self-disclosure is the process of deliberately revealing information about oneself that is significant and that would not normally be known by others. Let's take a closer look at some parts of this definition. Self-disclosure must be deliberate. If you accidentally mentioned to a friend that you were
thinking about quitting a job or proposing marriage, that information would not fit into the category we are examining here. Self-disclosure must also be significant. Revealing relatively trivial information would not fit into the category we are examining here. Self-disclosure. The third requirement is that the information being revealed would not fit into the category we are examining here.
be known by others. There's nothing noteworthy about telling others that you are depressed or elated if they already know how you're feeling. As Table 6-1 shows, people self-disclose for a variety of reasons. Some involve developing and "There's something you need to know about me, Donna. I maintaining relationships, but other reasons often don't
like people knowing things about me." 184-225 Ch06 Adler 2/28/05 9:46 AM Page 207 CHAPTER 6 TABLE 6-1 UNDERSTANDING INTERPERSONAL RELATIONSHIPS 207 Reasons for Self-Disclosure has the potential to improve and expand interpersonal relationships, but it serves other functions as well. As you read each of the
following reasons why people reveal themselves, see which apply to you. Reason Example/Explanation "I'm really confused about something I did last night. If I tell you, maybe I can figure out why I did it . . ." Self-clarification "I'm really confused about something I did last night. If I tell you, maybe I can figure out why I did it . . ."
Reciprocity "I really like you . . ." (Hoping for a similar disclosure by other person.) Impression management Salesperson to customer: "My boss would kill me for giving you this discount . . ." (Hoping disclosure will build trust.) Relationship maintenance and enhancement "I'm worried about the way things are going between us. Let's talk." or "I sure
am glad we're together!" Control (Employee to boss, hoping to get raise) "I got a job offer yesterday from our biggest competitor." Adapted from V. J. Derlega and J. Grezlak, "Appropriateness of Self-Disclosure," in G. J. Chelune, ed., Self-Disclosure," in G. J. vary from one situation to another, depending on several factors. The first important factor in whether we disclose seems to be how well we know the other personal information is relationship maintenance and enhancement. In other words, we
disclose to friends in order to strengthen the relationship. The second important reason is self-clarification—to sort out confusion to understand ourselves better. With strangers, reciprocity becomes the most common reason for disclosing. We offer information about ourselves to strangers to learn more about them, so we can decide whether and how
to continue the relationship. The second most common reason is impression formation. We often reveal information about ourselves to strangers to make ourselves look good. This information, of course, is usually positive—at least in the early stages of a friendship. Models of Self-Disclosure Over several decades, social scientists have created various
models to represent and understand how self-disclosure operates in relationships. In the next few pages we will look at two of the best-known models. BREADTH AND DEPTH: SOCIAL PENETRATION Social psychologists Irwin Altman and Dalmas Taylor describe two ways in which communication can be more or less disclosing 51 Their social
penetration model is pictured in Figure 6-4. The CULTURAL IDIOM opening up: talking about subjects that might otherwise be withheld 184-225 Ch06 Adler 208 2/28/05 PART TWO 9:46 AM Page 208 INTERPERSONAL COMMUNICATION first dimension of self-disclosure in this model involves the breadth of information volunteered—the range of
subjects being discussed. For example, the breadth of disclosure in your relationship with a fellow worker will expand as you begin revealing information about your life away from the job, as well as on-the-job details. The second dimension of disclosure is the depth of the information being volunteered, the shift from relatively nonrevealing messages
to more personal ones. Depth Depending on the breadth and depth of information shared, a relationship can be defined as casual or intimate relationship is likely to have high depth in at least one area. The most intimate relationships are those in which disclosure is
great in both breadth and depth. Altman and Taylor see the development of a relationship as a progression from the periphery of their model to its center, a process that typically occurs over time. Each of your personal relationship as a different combination of breadth of subjects and depth of Figure 6-4 Social Penetration Model disclosure
Figure 6-5 pictures a student's self- disclosure in one relationship. What makes the disclosure in some messages deeper than others? One way to measure depth is by how far it goes on two of the dimensions that define self-disclosure. Some revelations are certainly more significant than others. Consider the difference between saying "I love my
family" and "I love you." Other statements qualify as deep disclosure because they are private. Sharing a secret you've told to only a few close friends is certainly an act of self-disclosure, but it's even more revealing to divulge information that you've never told anyone. Breadth My career ambitions Breadth Feelings about my physical appearance
Feelings about our relationship Depth My opinions about our mutual friends My relationships with members of the opposite sex My academic life Figure 6-5 Sample Model of Social Penetration My family background and problems 184-225 Ch06 Adler 2/28/05 9:46 AM Page 209 CHAPTER 6 UNDERSTANDING INTERPERSONAL RELATIONSHIPS
SELF-DISCLOSURE, SELF-AWARENESS, AND RELATIONAL QUALITY: THE JOHARI WINDOW Another model that helps represent how self-disclosure operates is the Johari Window.52 (The window takes its name from the first names of its creators, Joseph Luft and Harry Ingham.) Imagine a frame inside which is everything there is to know about
you: your likes and dislikes, your goals, your secrets, your needs—everything about yourself all the time. To represent this, we can divide the frame containing everything about you into two parts: the part you know
about and the part you don't know about, as in Figure 6-7. We can also divide this frame containing everything about you in another way. In this division the first part contains the things about you that you keep to yourself. Figure 6-8 represents this view. When we impose these two
divided frames one atop the other, we have a Johari Window. By looking at Figure 6-9 you can see the everything about you window divided into four parts. Part 1 represents the blind area: information of which you are unaware but the
other person knows. You learn about information in the blind area primarily through feedback. Part 3 represents your hidden area: information that you know but aren't willing to reveal to others. Items in this hidden area become public primarily through self-disclosure, which is the focus of this chapter. Part 4 represents information that is unknown
to both you and others. At first, the unknown area seems impossible to verify. After all, if neither you nor others know what it contains, how can you be sure it exists? We can deduce its existence because we are constantly discovering new things about ourselves. It is not unusual to discover, for example, that you have an unrecognized talent, strength,
or weakness. Items move from the unknown area into the open area either directly when you disclose your insight or through one of the individuals involved have little open area. Going a step further, you can see that a relationship is limited by the individual who
is less open, that is, who possesses the smaller open area. Figure 6-10 illustrates this situation with Johari Windows. Everything about you Figure 6-8 The Johari Windows. Everything about You Known to self Figure 6-8 The Johari Windows. Everything about You Known to self Figure 6-8 The Johari Windows. Everything about You Known to self Figure 6-8 The Johari Windows. self-disclosure on both sides is necessary for the development of any interpersonal relationship. This chapter will describe just how much self-disclosure can certainly be valuable, but using it effectively requires an understanding of how it operates. Here are some
States are more disclosing than members of any other culture studied.53 They are likely to disclose more about themselves to acquaintances and even strangers. By contrast, Germans tend to disclose more about themselves in even their closest
relationships. Cultural differences like this mean that what counts as disclosing communication varies from one culture to another. If you were raised in the United 184-225 Ch06 Adler 2/28/05 9:47 AM Page 211 CHAPTER 6 UNDERSTANDING INTERPERSONAL RELATIONSHIPS States, you might view people from certain other cultures as
undisclosing or even standoffish. But the amount of personal information that the nonnatives reveal might actually be quite personal and revealing according to the standards of their culture. The converse is also true: To members of some other cultures, North Americans probably appear like exhibitionists who spew personal information to anyone
within earshot. When communicating with people from different cultures it's important to consider their standards for appropriate disclosure. Don't mistakenly judge them according to your own standards. Likewise, be sensitive about honoring their standards when talking about yourself. In this sense, choosing the proper level of self-disclosure isn't
too different from choosing the appropriate way of dressing or eating when encountering members of a different culture: What seems familiar and correct at home may not be suitable with strangers. As you read on, realize that the characteristics and guidelines that suit mainstream North American culture may not apply in other contexts. SELF-
DISCLOSURE USUALLY OCCURS IN DYADS Although it is possible for people to disclose a great deal about themselves in groups, such communication usually occurs in one-to-one settings. Because revealing significant information about yourself involves a certain amount of risk, limiting the disclosure to one person at a time minimizes the chance
that your disclosure will lead to unhappy consequences. EFFECTIVE SELF-DISCLOSURE IS USUALLY SYMMETRICAL Note in Figure 6-10 that the amount of successful, two-way communication (represented by the arrows connecting from B's
open area and being turned aside by A's hidden and blind areas represent unsuccessful attempts to communicate. In situations such as this, it's easy to imagine how B would soon limit the amount of disclosure given by B, the relationship would move to a new
level of intimacy. In either case, we can expect that most often the degree of disclosure between partners will soon stabilize at a symmetrical level. EFFECTIVE SELF-DISCLOSURE OCCURS INCREMENTALLY Although instances are
rare. In most cases, the amount of disclosure increases over time. We begin relationships by revealing relatively little about ourselves; then if our first bits of self-disclosure are well received and bring on similar responses from the other person, we're willing to reveal more. This principle is important to remember. It would usually be a mistake to
partners in intimate relationships rarely talk about personal information.55 Whether or not we open up to others is based on several criteria, some of which are listed in Table 6-2. What is the optimal amount of self-disclosure? You might suspect that the correct answer is "the more, the better," at least in personal relationships. Research has showed
 that the matter isn't this simple, however. 56 For example, there seems to be a curvilinear relationship between openness and satisfaction in marriage, so that a moderate amount of openness is how well the level of disclosure matches the expectations
of communicators: If we get what we believe is a reasonable amount of candor from others, we are happy. If they tell us too little—or even too much—we become less satisfied. TABLE 6-2 Some Criteria Used to Reveal Family Secrets Intimate Exchange Does the other person feel
better? Would knowing the secret help the other person manage her problem? Exposure Will the other person find out this information? Will revealing this information? Will revealing this information? Will revealing this information? Will reveal this information? Will reveal this information? Will reveal this information make matters better?
Acceptance Will the other person still accept me if I reveal this information? Conversational Appropriateness Will my disclosure fit into the conversation? Has the topic of my disclosure come up in this conversation? Relational Security Do I trust the other person with this information? Do I feel close enough to this person to reveal the secret?
Important Reason Is there a pressing reason to reveal this information? Permission Have other people involved in the secret given their permission for me to reveal it? Would I feel okay telling the people involved that I have revealed the secret given their permission for me to reveal it? Would I feel okay telling the people involved that I have revealed the secret? Membership Is the person to whom I'm revealing the secret going to join this group (i.e., family)? Adapted
from A. L. Vangelisti, J. P. Cauglhin, and L. Timmerman, "Criteria for Revealing Family Secrets," Communication Monographs 68 (2001): 1-27. 184-225 Ch06 Adler 2/28/05 9:47 AM Page 213 CHAPTER 6 UNDERSTANDING INTERPERSONAL RELATIONSHIPS Guidelines for Appropriate Self-Disclosure One fear we've had while writing this chapter is
that a few overenthusiastic readers may throw down their books and begin to share every personal detail of their lives with whomever they can find. As you can imagine, this kind of behavior isn't an example of effective interpersonal communication. No single style of self-disclosure is appropriate for every situation. Let's take a look at some
guidelines that can help you recognize how to express yourself in a way that's rewarding for you and the others involved.57 IS THE OTHER PERSON IMPORTANT TO YOU? There are several ways in which someone might be important. Perhaps you have an ongoing relationship deep enough so that sharing significant parts of yourself justifies keeping
your present level of togetherness intact. Or perhaps the person to whom you're considering disclosure may be the path toward developing that personal relationship. IS THE RISK OF DISCLOSING REASONABLE? Take a
realistic look at the potential risks of self-disclosure. Even if the probable benefits are great, opening yourself up to almost certain rejection may be asking for trouble. For instance, it might be foolhardy to share your important feelings with someone you know is likely to betray your confidences or ridicule them. On the other hand, knowing that your
partner is trustworthy and supportive makes the prospect of speaking out more reasonable. Revealing personal thoughts and feelings can be especially risky on the job.58 The politics of the workplace sometimes requires communicators to keep feelings to themselves in order to accomplish both personal and organizational goals. You might, for
example, find the opinions of a boss or customer personally offensive but decide to bite your tongue rather than risk your job or lose goodwill for the company. ARE THE AMOUNT AND TYPE OF DISCLOSURE APPROPRIATE? A third point to realize is that there are degrees of self-disclosure. Telling others about yourself isn't an all-or-nothing decision
you must make. It's possible to share some facts, opinions, or feelings with one person while reserving riskier ones for others. In the same vein, before sharing very important information with someone who does matter to you, you might consider testing reactions by disclosing less personal data. IS THE DISCLOSURE RELEVANT TO THE SITUATION
AT HAND? The kind of disclosure that is often a characteristic of highly personal relationships usually isn't appropriate in less personal settings. For instance, a study of classroom communication revealed that sharing all feelings—both positive and negative—and being completely honest resulted in less cohesiveness than having a "relatively" honest resulted in less personal settings.
climate in which pleasant but superficial relationships were the norm.59 Even in personal relationships—with close friends, family members, and so on—constant disclosure isn't a useful goal. The level of sharing in successful relationships rises and falls in cycles. You may go through a period of great disclosure and then spend another period of
relative nondisclosure. Even during a phase 213 CULTURAL IDIOM opening yourself up: letting yourself become vulnerable on the other hand: from the other point of view to bite your tongue: to remain silent in the same vein: related to this idea 184-225_Ch06_Adler 214 2/28/05 PART TWO 9:47 AM Page 214 INTERPERSONAL COMMUNICATION
CULTURAL IDIOM talking your heart out: revealing your innermost thoughts and feelings of high disclosure, sharing everything about yourself isn't necessarily constructive. Usually the subject of appropriate self-disclosure involves the relationship rather than personal information. Furthermore, it is usually most constructive to focus your disclosure
about the relationship on the "here and now" as opposed to "there and then." "How am I feeling now?" These are appropriate topics for sharing personal thoughts and feelings. There are certainly times when it's relevant to bring up the past but only as it relates to what's going on in the present. IS THE DISCLOSURE
RECIPROCATED? There's nothing quite as disconcerting as talking your heart out to someone only to discover that the other person has yet to say anything to you that is half as revealing as what you've been saying. And you think to yourself, "What am I doing?" Unequal self-disclosure creates an unbalanced relationship, one doomed to fall apart
There are few times when one-way disclosure is acceptable. Most of them involve formal, therapeutic relationships in which a client approaches a trained professional with the goal of resolving a problem. For instance, you wouldn't necessarily expect to hear about a physician's personal ailments during a visit to a medical office. Nonetheless, it's
interesting to note that one frequently noted characteristic of effective psychotherapists, counselors, and teachers is a willingness to share their feelings about a relationship with their clients. WILL THE EFFECT BE CONSTRUCTIVE? Self-disclosure can be a vicious tool if it's not used carefully. Psychologist George Bach suggests that every person
has a psychological "belt line." Below that belt line are areas about which the person is extremely sensitive. Bach says that jabbing at a "below-the-belt" area is a surefire way to disable another person, although usually at great cost to the relationship. It's important to consider the effects of your candor before opening up to others. Comments such as
"I've always thought you were pretty unintelligent" or "Last year I made love to your best friend" may sometimes resolve old business and thus be constructive, but they also can be devastating—to the listener, to the relationship, and to your self-esteem. Hateful to me as are the gates of hell Is he, who hiding one thing in his heart, Utters another.
Homer Iliad IS THE SELF-DISCLOSURE CLEAR AND UNDERSTANDABLE? When you express yourself in a way that's intelligible. This means describing the sources of your message clearly. For instance, it's far better to describe another's behavior by saying, "When you don't answer my phone calls or
drop by to visit anymore . . ." than to complain vaguely, "When you avoid me . . ." It's also vital to express your thoughts and feelings explicitly. "I feel worried because I'm afraid you don't care about me" is more understandable than "I don't like the way things have been going." Alternatives to Self-Disclosure At first glance, our moral heritage leads us not self-Disclosure.
to abhor anything less than the truth. Ethicists point out that the very existence of a society seems based on a foundation of truthfulness. 60 Although isolated cultures do exist where deceit is a norm, they are dysfunctional and on the verge of breakdown. 184-225_Ch06_Adler 2/28/05 9:47 AM Page 215 CHAPTER 6 UNDERSTANDING
INTERPERSONAL RELATIONSHIPS Although honesty is desirable in principle, it often has risky, potentially unpleasant consequences. This explains why communicators—even those with the best intentions—aren't always completely honest when they find themselves in situations when honesty would be uncomfortable. 61 Three common alternatives
to self-disclosure are lies, equivocation, and hinting. We will take a closer look at each one. LIES To most people, lying appears to be a breach of ethics. Although lying to gain unfair advantage over an unknowing victim seems clearly wrong, another kind of untruth isn't so easy to dismiss as completely unethical. White lies, more appropriately called
altruistic lies, are defined (at least by the people who tell them) as being harmless, or even helpful, to the person to whom they are innocent, altruistic lies are certainly common. In one study, 130 subjects
were asked to keep track of the truthfulness of their everyday conversational statements. 63 Only 38.5 percent of these statements—slightly more than a third—proved to be totally honest. In another experiment, 147 people between the ages of 18 and 71 kept a log of all the lies they told over a one-week period. Both men and women reported being
untruthful in approximately a fifth of their conversations that lasted over ten minutes. 64 Over the course of the week, the subjects reported lying to about 30 percent of the people with whom they had one-on-one conversations. The rate was much higher in some relationships. For example, dating couples lie to each other in about a third of their
interactions, and college students told at least one lie to their conversations. In yet another study, subjects recorded their conversations over a two-day period and later counted their own deceptions. The average lie rate: three fibs for every ten minutes of conversation. 65 TABLE 6-3 215 The injunction against
bearing false witness, branded in stone and brought down by Moses from the mountaintop, has always provoked ambivalent, conflicting emotions. On the one hand, nearly everyone condemns lying. On the other, nearly everyone does it every day. Paul Gray Some Reasons for Lying Reason Example Acquire resources "Oh, please let me add this class."
If I don't get in, I'll never graduate on time!" Protect resources "I'd like to lend you the money, but I'm short myself." Initiate and continue interaction or take leave "That sounds like fun, but I'm busy Saturday night."
"Oh, look what time it is! I've got to run!" Present a competent image "Sure, I understand. No problem." Increase social desirability "Yeah, I've done a fair amount of skiing." Adapted from categories originally presented in C. Camden, M.T. Motley, and A.Wilson, "White Lies in Interpersonal Communication: A Taxonomy and Preliminary Investigation of
Social Motivations," Western Journal of Speech Communication 48 (1984): 315. 184-225_Ch06_Adler 216 2/28/05 PART TWO 9:47 AM INTERPERSONAL COMMUNICATION CULTURAL IDIOM a put-on: a false show of emotion on the one hand: from one point of view on the other hand: from one point of view on the other hand: from the other hand: 
less taxing on: less demanding of Source: © Zits Partnership. Reprinted with special permission of King Features Syndicate. Page 216 What are the consequences of discovering that you've been lied to? In an interpersonal relationship, the discovery can be traumatic. As we grow closer to others, our expectations about their honesty grow stronger. After
all, discovering that you've been deceived requires you to redefine not only the lie you just uncovered, but also many of the messages you previously took for granted. Was last week's compliment really sincere? Was your joke really funny, or was the other person's laughter a put-on? Does the other person care about you as much as he or she claimed?
Research has shown that deception does, in fact, threaten relationships.66 Not all lies are equally devastating, however. Feelings like dismay and betrayal are greatest when the importance of the subject is high, and when there was previous suspicion that the other person wasn't being completely honest. Of these
three factors, the importance of the information lied about proved to be the key factor in provoking a relational crisis. We may be able to cope with "misdemeanor" lying, but "felonies" are a grave threat. In fact, the discovery of major deception can lead to the end of the relationship. More than two-thirds of the subjects in one study reported that their
relationship had ended since they discovered a lie. Furthermore, they attributed the breakup directly to the lie. If preserving a relationship is important, honesty—at least about important matters—really does appear to be the best policy. EQUIVOCATION Lying isn't the only alternative to self-disclosure. When faced with the choice between lying and
telling an unpleasant truth, communicators can—and often do—equivocate. As Chapter 3 explained, equivocal language has two or more equally plausible meanings. Sometimes people send equivocal messages without meaning to, resulting in confusion. "I'll meet you at the apartment," could refer to more than one place. But other times we are
deliberately vague. For instance, when a friend asks what you think of an awful outfit, you could say, "It's really unusual—one of a kind!" Likewise, if you are too angry to accept a friend's apology but don't want to appear petty, you might say, "Don't mention it." The value of equivocation becomes clear when you consider the alternatives. Consider the
dilemma of what to say when you've been given an unwanted present—an ugly painting, for example—and the giver asks what you think of it. How can you respond? On the one hand, you need to choose between telling the truth and lying. On the other hand, you have a choice of whether to make your response clear or vague. Figure 6-11 displays
these choices. After considering the alternatives, it's clear that the first choice—an equivocal, true response—is far preferable to the other choices in several respects. First, it spares the receiver from embarrassment. For example, rather than flatly saying "no" to an unappealing invitation, it may be kinder to say "I have other plans"—even if those
plans are to stay home and watch TV. Besides saving face for the recipient, honest equivocation can be less stressful for the sender than either 184-225 Ch06 Adler 2/28/05 9:47 AM Page 217 CHAPTER 6 UNDERSTANDING INTERPERSONAL RELATIONSHIPS 217 IS IT EVER RIGHT TO LIE? Is it ever right to lie? What about the example from
freshman philosophy: The Nazis come to your door asking if you are hiding a Jewish family. You are. Should you say "No"? Or, on a mundane level, your spouse or lover walks in with an utterly silly new hairdo and asks, "Do you like it?" Does morality dictate that you ruin the evening? Or can you, in both cases, finesse the answer, not lying but not
telling the truth, either, perhaps by avoiding an answer to the question? The demand for honesty is contextual. It depends on what the truth concerns. The Bible tells us not to bear false witness against our neighbor. Perjury, we can agree, is wrong: The consequences can be awful. But it seems to me absolutely crucial to distinguish here between
public and private life. Perjury, by its very nature, is public, as is politics. Sex, with a few obvious exceptions, is part of our private life. And just about everyone is less than forthright about sex. Not all untruths are malicious. Telling the truth can complicate or destroy social relationships. It can undermine precious collective myths. Honestly can be
cruel. Sometimes, deception is not a vice but a social virtue, and systematic deception is an essential part of the (social) world. In many countries—Japan and Western Samoa, for example—social harmony is valued far more than truthfulness as such. To tell another person what he or she wants to hear, rather than what one might actually
feel or believe, is not only permitted but expected. Could we not begin to see our own enlightened emphasis on "seeking the truth at all costs" as one more ethnocentric peculiarity, another curious product of our strong sense of individualism, and a dangerously unsociable conception? The obvious truth is that our simplest social relationships could
not exist without the opaque medium of the lie. The best answer to the question "What are you thinking?" is often "Oh, nothing." Perhaps deception, not truth, is the cement of civilization—cement that does not so much hold us together as safely separate us and our thoughts. Some things are better left in the dark. In contrast to Kant, for whom the rule
against lying was a moral law, a "categorical imperative" never to be overridden, utilitarian philosophers insist that lying is wrong only because a lie does, in fact, cause more harm than good. There is no absolute prohibition here, rather perhaps a "rule of thumb," and there may well be many cases, such as the "white lies" described above, in which
lying causes no harm and may even be commendable. The problem, as Nietzsche so wisely complains, is "not that I no longer believe you." It is not the breach of the lie or the character of the liar. It is that lying compromises and corrupts our
relationships. In other words, the wrongness of lying does not have to do primarily with breaches of principle but a very particular and personal relationship between people. What is wrong with lying, in other words, is not exactly what
philosophers have often supposed. Lying undermining trust. But trust may just as often be supported by mutual myths, by religious faith, by a clear understanding of what is private and personal and what is "the public's right to know." Trust is usually violated by lies, but trust can be more deeply damaged by a violation of
personal boundaries, which in turn may invite lies and deception to protect what has been violated. Robert C. Solomon telling the truth bluntly or lying. Because equivocation is often easier to take than the cold, hard truth, it spares the teller from feeling guilty. It's less taxing on the conscience to say, "I've never tasted anything like this" than to
say, "this meal tastes terrible," even though the latter comment is more precise. Few people want to lie, and equivocation provides an alternative to deceit. 67 A study by communication researcher Sandra Metts and her colleagues shows how equivocation provides an alternative to deceit. 67 A study by communication researcher Sandra Metts and her colleagues shows how equivocation provides an alternative to deceit. 67 A study by communication researcher Sandra Metts and her colleagues shows how equivocation provides an alternative to deceit. 67 A study by communication researcher Sandra Metts and her colleagues shows how equivocation provides an alternative to deceit. 68 Several hundred college students where asked how they
would turn down the unwanted sexual overtures from a person whose feelings were important to them: either a close friend, a prospective date, or a dating partner. The majority of students chose a 184-225_Ch06_Adler 218 2/28/05 PART TWO 9:47 AM Page 218 INTERPERSONAL COMMUNICATION Equivocal CULTURAL IDIOM face-saving
protective of one's dignity OPTION II: (Equivocal, True Message) OPTION II: (Equivocal, False Message) "What an unusual painting! I've never seen anything like it!" "Thanks for the painting. I'll hang it as soon as I can find just the right place." OPTION III: (Clear, True Message) OPTION IV: (Clear, False Message) "It's just not my kind of painting."
don't like the colors, the style, or the subject." "What a beautiful painting! I love it." False True Clear Figure 6-11 Dimensions of Truthfulness and Equivocation diplomatic reaction ("I just don't feel sexually attracted to you." The
diplomatic reaction seemed sufficiently clear to get the message across but not so blunt as to embarrass or even humiliate the other person. (Interestingly, men said they would be able to handle a direct rejection more comfortably than women. The researchers suggest that one reason for the difference is that men stereotypically initiate sexual offers
and thus are more likely to expect rejection.) Besides preventing embarrassment, equivocal language can also save the speaker from being caught lying. If a potential employer asks about your overall grade average is closer to C.The statement
isn't a complete answer, but it is honest as far as it goes. As one team of researchers put it, "Equivocation is neither a false message nor a clear truth, but rather an alternative used precisely when both of these are to be avoided." 69 Given these advantages, it's not surprising that most people will usually choose to equivocate rather than tell a lie. In a
series of experiments, subjects chose between telling a face-saving lie, telling the truth, and equivocating. Only 6 percent chose the equivocating, 71 but given the choice, they prefer to finesse the
truth. HINTING Hints are more direct than equivocal statements. Whereas an equivocal message isn't necessarily aimed at changing others' behavior, a hint seeks to get the desired response from others. Some hints are designed to save the receiver from embarrassment: 72 FACE-SAVING HINT DIRECT STATEMENT These desserts are terribly
overpriced. You're too overweight to be ordering dessert. I know you're busy; I'd better let you go. I'm bored. I want to get out of this conversation. 184-225_Ch06_Adler 2/28/05 9:47 AM Page 219 CHAPTER 6 UNDERSTANDING INTERPERSONAL RELATIONSHIPS Other hints are strategies for saving the sender from embarrassment: FACE-SAVING
HINT DIRECT STATEMENT I'm pretty sure that smoking isn't permitted here. Your smoking bothers me. Gee, it's almost lunchtime. Have you out for lunch, but I don't want to risk a "no" answer to my invitation. 219 CULTURAL IDIOM go right over the head of: be
difficult for someone to understand The success of a hint depends on the other person's ability to pick up the unexpressed message. Your subtle remarks might go right over the head of an insensitive receiver—or one who chooses not to respond to them. If this does happen, you still have the choice to be more direct. If the costs of a straightforward
equivocators, and hinters can be said to possess a certain kind of communicative competence. On the other hand, there are certainly times when honesty is the right approach, even if it's painful. At times like these, evaders could be viewed as lacking the competence or the integrity to handle a situation most effectively. Are hints, benign lies, and
equivocations an ethical alternative to self-disclosure? Some of the examples in these pages suggest the answer is a qualified "yes." Many social scientists and philosophers agree. Some argue that the morality of a speaker's motives for lying ought to be judged, not the deceptive act itself.73 Others ask whether the effects of a lie will be worth the
deception. Ethicist Sissela Bok offers some circumstances where deception may be justified: doing good, avoiding harm, and protecting a larger truth. 74 Perhaps the right questions to ask, then, are whether an indirect message is truly in the interests of the receiver, and whether this sort of evasion is the only effective way to behave. Bok suggests
another way to check the justifiability of a lie:Imagine how others would respond if they knew what you were really thinking or feeling. Would they accept your reasons for not disclosing? ETHICAL CHALLENGE THE ETHICS OF LYING AND EQUIVOCATING Research shows that virtually everyone hints, lies, and equivocates for a variety of reasons

your analysis of the information collected in Step 1, identify the ethical legitimacy of each type of nondisclosing communication. Are any sorts of deception justifiable? Which sorts are not? How would you feel if you discovered the other person had not been straightforward with you under similar circumstances? 184-225_Ch06_Adler 220 2/28/05 PART
TWO 9:47 AM Page 220 INTERPERSONAL COMMUNICATION SUMMARY An interpersonal relationship is one in which two or more people meet one another's social needs to a greater or lesser degree. Communication can be considered interpersonal either according to the context or the quality of interaction. Regardless of which definition is
used, communication in relationships consists of both content and relational messages. Explicit relational messages are termed metacommunication. Intimacy is a powerful need for most people. Intimacy is a powerful need for most people is need to be a powerful need for most people. Intimacy is a powerful need for most people is need to be a powerful need for most people. Intimacy is a powerful need for most people is need to be a powerful need for most people. intimacy has varied according to historical period, culture, and gender. Along with the desire for closeness, a need for distance is equally important. These opposing drives lead to conflicting communication behavior at different stages in people's lives and their relationships. The challenge is to communicate in a way that strikes a balance between
intimacy and distance. Some communication theorists suggest that intimate relationships pass through a series of stages, each of which is characterized by a unique mode of communication. These stages fall into three broad phases: coming together, relational maintenance, and coming apart. Although the movement within and between these stages
                             patterns, the amount and direction of movement are not predetermined. Some relationships move steadily toward termination, whereas others shift backward and forward as the partners redefine their desires for intimacy and distance. Other theorists take a dialectal view, arguing that the same series of opportunity toward termination, whereas others shift backward and forward termination, whereas others shift backward and forward termination, whereas others shift backward and forward termination.
operate throughout the entire span of relationships. These dialectical drives include autonomy vs. connection, predictability vs. novelty, and openness vs. privacy. Since these opposing forces are inevitable, the challenge is to develop strategies for dealing with them that provide relational satisfaction. Self-disclosure is the process of deliberately
revealing significant information about oneself that would not normally be known. The breadth and depth of selfdisclosure can be described by the social penetration model. The Johari Window model reveals an individual's open, blind, hidden, and unknown areas. Complete self-disclosure is not common, nor is it always desirable. The chapter listed
several guidelines to help determine when it is and is not appropriate. The chapter concluded by describing three widely used alternatives can be appropriate. KEY TERMS affinity 190 altruistic lies 215 breadth (of self-disclosure) 208 content
messages 190 contextual interpersonal communication 188 control 191 depth (of self-disclosure) 208 developmental model (of relational maintenance) 202 dialectical tensions 202 equivocal language 216 immediacy 191 intimacy 193 Johari Window 209 metacommunication 192 qualitative interpersonal communication 189
relational messages 190 respect 191 self-disclosure 206 social penetration model 207 184-225 Ch06 Adler 2/28/05 9:47 AM Page 221 CHAPTER 6 ACTIVITIES 1. Interpersonal relationships in a contextual sense by making two lists. The first should contain all the two-person
relationships in which you have participated during the past week. The second should contain all your relationships that have occurred in small-group and public contexts. Are there any important differences that distinguish dyadic interaction from communication with a larger number of people? 2. Now make a second set of two lists. The first one
should describe all of your relationships that are interpersonal in a qualitative sense, and the second should describe all the two-person relationships you have identified? 3. Compare the lists you developed in Steps 1 and 2. See what useful
information each one contains. What do your conclusions tell you about the difference between contextual and qualitative definitions of interpersonal communication? 2. Identifying Relational Messages To complete this exercise, you will need the help of a partner with whom you communicate on an ongoing basis. 1. Pick three recent exchanges
between you and your partner. Although any exchanges will do, the most interesting ones will be those in which you sense that something significant (positive or negative) was going on that wasn't expressed overtly. 2. For each exchange, identify both the content and relational messages that you were expressing. Identify relational messages in terms
of dimensions such as affinity, respect, immediacy, and/or control. UNDERSTANDING INTERPERSONAL RELATIONSHIPS 221 3. Explain the concept of relational messages to your partner, and ask him or her to identify the relational messages to your partner, and ask him or her to identify the relational messages to your partner, and ask him or her to identify the relational messages to your partner.
analysis of the relational messages? 4. Now identify the relational messages you interpreted your partner as sending during the three exchanges. 5. Ask your partner to describe the relational messages he or she believed were sent to you on these occasions. How closely did your interpretation match your partner as sending during the three exchanges.
of these three exchanges, answer the following questions: 1. What significant kinds of relational messages? How accurate is your partner in decoding your relational messages? What lessons have you learned from this exercise that can
improve the quality of your relationship? 3. Your I.Q. (Intimacy Quotient) Answer the following questions as you think about your relationship? 2. What intellectual intimacy do you share? 3. How emotionally intimate are you? Is your emotional intimacy in your relationship? 2. What intellectual intimacy do you share? 3. How emotionally intimate are you? Is your emotional intimacy in your relationship? 3. Your I.Q. (Intimacy do you share? 3. How emotionally intimate are you? Is your emotional intimacy in your relationship? 3. Your I.Q. (Intimacy do you share? 3. How emotionally intimate are you? Is your emotional intimacy in your relationship? 3. Your I.Q. (Intimacy do you share? 3. How emotionally intimate are you? Is your emotional intimacy in your relationship? 3. Your I.Q. (Intimacy do you share? 3. How emotionally intimate are you? Is your emotional intimacy in your relationship? 3. Your I.Q. (Intimacy do you share? 3. How emotionally intimate are you? Is your emotional intimacy in your relationship? 3. Your I.Q. (Intimacy do you share? 3. How emotionally intimate are you? Is your emotional intimacy in your relationship? 3. Your I.Q. (Intimacy do you share? 3. How emotionally intimate are you? Is your emotional intimacy in your relationship? 3. Your I.Q. (Intimacy do you share? 3. How emotionally intimate are you? Is your emotional intimacy in yo
deeper in some ways than in others? 4. Has your intimacy level changed over time? If so, in what ways? After answering these questions, ask yourself how satisfied you are with the amount of intimacy in this relationship. Identify any changes you would like to occur, and describe the steps you could take to make them happen. 184-225 Ch06 Adler
222 2/28/05 PART TWO 9:47 AM Page 222 INTERPERSONAL COMMUNICATION 4. Striking a Balance between Intimacy and Distance Choose an important interpersonal relationship with someone you encounter on a frequent, regular basis. You might choose a friend, family member, or romantic partner. For at least a week, chart how your
communication with this relational partner reflects your desire for either intimacy or distance. Use a seven-point scale, in which behavior seeking high intimacy receives a 1. Use ratings from 2 through 6 to reflect intermediate stages. Record at least one
rating per day, making more detailed entries if your desire for intimacy or distance changes during that period. After charting your communication, reflect on what the results tell you about your personal examples of times when you
have disclosed personal information for each of the reasons listed in Table 6-1. Explain your answer by describing: the person who was the target of your self-disclosure are most characteristic of your self-disclosure.
communication. Note: In order to protect privacy, this exercise can be conducted in class by having each member submit anonymous entries. 1. Which state—intimacy or distance—seemed most desirable for you? 7. Ef fective Self-Disclosur e Choose a selfdisclosing message that is important enough for you to consider sharing. Use the guidelines on
pages 213-214 to craft the message in a way that maximizes the chances of having it received successfully. Share your message strategy with classmates, and get their opinion of whether it needs refinement. 2. To the degree that you seek intimacy, which variety or varieties are most important to you: intellectual, emotional, and/or physical? FOR
FURTHER EXPLORATION 3. Was the pattern you charted during this week typical of your communication in this relationships? 5. Most importantly, are you satisfied with the results you discovered in this exercise? If not, how
would you like to change your communication behavior? 5. Juggling Dialectical Tensions Identify one situation in which you are trying to manage dialectical tensions in your life. (Describe which of the dialectical tensions in your life.)
listed on pages 204-205 do you use? 2. How effective for managing the tensions in this situation? 4. How might things go differently if you choose the alternative strategy? For a more detailed list of readings about interpersonal relationships, see the
CD-ROM that came with this book, and the Understanding Human Community in a Technological Age, New York: Oxford University Press, 2005. The author argues that media and technology have eroded our sense of community. He analyzes the
"interpersonal divide"—the void that he claims develops when we spend too much time in virtual rather than real communities, and makes the case for face-to-face communication in an increasingly mediated world. 184-225 Ch06 Adler 2/28/05 9:47 AM Page 223 CHAPTER 6 Buller, David B. "Deception," in Communicating Strategically: Strategies in
Interpersonal Communication. John A. Daly and John M.Wiemann, eds., Hillsdale, NJ: Erlbaum, 1994. Canary, Daniel J., and Marianne Dainton. Mahwah, NJ: Erlbaum, 2003. As its name suggests, this volume explores the ways in which people communicate to maintain various types of relationships.
Contexts include interaction among family members, romantic partners, friends, and colleagues. Other chapters address dimensions including culture, long-distance relationships, and in computer-medical contexts. UNDERSTANDING INTERPERSONAL RELATIONSHIPS 223 Mashek, Debra, J. and Arthur Aron, Handbook of Closeness and Intimacy.
Mahwah, NJ: Erlbaum, 2004. This handbook brings together the latest thinking on the scientific study of closeness and intimacy? What individual differences and intimacy? Montgomery,

Gendered Lives, 6th ed. Belmont, CA: Wadsworth, 2005. Wood shows how gender affects relational communication in a variety of contexts and ways. Chapters examine the influence of gender on various types of relationships: personal (including friendship), romantic, and professional. 184-225 Ch06 Adler 224 2/28/05 PART TWO 9:47 AM Page 224
INTERPERSONAL COMMUNICATION Feature Films Culture and Relational Development For descriptions of each film below and descriptions of other movies that illustrate interpersonal relationships, see the CD-ROM that came with this book, and the Understanding Human Communication Web site at www.oup.com/us/uhc. Japanese Story (2004).
Rated R. Building Relationships Lost in Translation (2003). Rated R. Actor Bob Harris (Bill Murray) and a young bride, Charlotte (Scarlett Johansson), are both lonely and trust they develop through self-disclosure. Bob looks at Charlotte wistfully and
wonders how he might have built a closer relationship with his own wife. Charlotte looks to Bob for advice about how to remedy her tepid marriage. The film shows how Charlotte and Bob move through the "coming together" stages of their platonic relationship, offering each other much-needed support. The audience is left wondering whether their
relationship will become romantic. In any case, they clearly learn a great deal about themselves and each other as a result of being "strangers in a strange land" together. Australian geologist Sandy Edwards (Toni Collette) is to serve as a quide for visiting Japanese client Hiromitsu (Gotaro Tsunashima), on a tour mining sites in the Pilbura
desert. Their first impression of each other are less than positive, due largely to cultural differences. When they meet, Hiromitsu is taken aback that a female was assigned to show him around. (He refers to her as his "driver.") Sandy's first impression of Hiromitsu is taken aback that a female was assigned to show him around.
Japan. As Sandy and Hiromitsu overcome this rocky start, they begin to grow closer despite their limited ability to communicate verbally. (He knows a little English; she knows no Japanese.) Gradually, they develop a measure of intimacy through intellectual sharing, as both learn about the other's knowledge of geology. Then, a shared activity brings
them closer when their SUV gets stuck in the middle of the desert, and they struggle to overcome their lifethreatening peril together. At this point their intimacy moves from friendship to romance. The film illustrates how negative first impressions and cultural differences can be overcome by communicators who make the time and effort to do so. 184-
225_Ch06_Adler 2/28/05 9:47 AM Page 225 CHAPTER 6 UNDERSTANDING INTERPERSONAL RELATIONSHIPS 225 The Importance of Intimacy Relational Dialectics About a Boy (2002). Rated PG-13. Will Freeman (Hugh Grant) is a bachelor who proudly proclaims himself free of any emotional
commitments. Twelve-year-old Marcus (Nicholas Hoult) is also a loner, but not by choice. His bad haircut, nerdy clothing, and visible love for his mother for their own devices. Marcus wants Will to marry his mother; Will wants Marcus to
feign the role of son to help Will score points with other single moms. Neither plan works—but in the process, Will and Marcus slowly creep inside each other's lives. The intimacy they experience as friends changes both of them for the better. Ultimately they learn that, indeed, no person is meant to be an island. Jesminder "Jess" Bhamra (Parminder
Nagra) is a young teen juggling conflicting goals, relationships, and cultures. Her parents want her to embrace her Indian heritage and traditional Sikh upbringing, but she would rather play soccer in the parks of London. Jess knows her parents would never allow her to participate—so she doesn't tell them. Instead, she makes up stories so she can
attend practices and games. Secrets are a central theme of this movie, as several characters wrestle with the dialectical tension of openness versus privacy. Ultimately, Jess decides to openly pursue her goals and dreams, even if it disappoints the people she loves. In all of her relationships—with family, friends, and lovers—Jess finds that she must
balance connection with autonomy, predictability with novelty, and privacy with openness. 226-257 Ch07 Adler 2/28/05 9:48 AM Page 226 AFTER STUDYING THE MATERIAL IN THIS CHAPTER . . . You should understand: 1. The role of communication climate in interpersonal relationships. 2. Types of messages that contribute to confirming and
disconfirming climates. 3. The unavoidable but potentially problematic role of conflict in interpersonal relationships. 4. Characteristics of nonassertive, directly aggressive, passive-aggressive, indirect, and assertive communications. 5. The influence of culture and gender on conflict styles. 6. The differences between win-lose, lose-lose, compromising,
and win-win approaches to conflict resolution. You should be able to: 1. Identify disconfirming messages and replace them with confirming ones, using the Gibb categories of supportive communication. 2. Describe the degree to which you use nonassertive, directly aggressive, passive-aggressive, indirect, and assertive messages and choose more
satisfying responses as necessary. 3. Compose and deliver an assertive message, using the behavior-interpretation feeling-consequence-intention format. 4. Apply the win-win approach to an interpersonal conflict. 226-257 Ch07 Adler 2/28/05 9:48 AM Page 227 CHAPTER HIGHLIGHTS Communication climates are intangible but critical ingredients in
```

```
relational satisfaction. In the first part of this chapter, you will learn Month makes some messages disconfirming and other messages disconfirming. The nature of
conflict. How people express conflict. The influence of gender and culture on conflict in relationships. Methods of conflict resolution, including the win-win approach. CHAPTER SEVEN Improving Interpersonal Relationships 226-257 Ch07 Adler 228 2/28/05 PART TWO 9:48 AM Page 228 INTERPERSONAL COMMUNICATION No matter how
satisfying your relationships, there are almost certainly ways they could be better. At times even the best of friends, the closest of families, and the most productive coworkers become dissatisfied. Sometimes the people involved are unhappy with each other. At other times, one person's problem is unrelated to the relationship. In either case, there's a
desire to communicate in a way that makes matters better. The ideas in this chapter can help you improve the important relationships in your life. We'll focus on methods for understanding and resolving interpersonal conflicts.
COMMUNICATION CLIMATES IN INTERPERSONAL RELATIONSHIPS Personal relationships are a lot like the weather. Some are fair and warm, whereas others change dramatically—calm one moment and turbulent the next. You can'
measure the interpersonal climate by looking at a thermometer or glancing at the sky, but it's there nonetheless. Every relationship has a feeling, a pervasive mood that colors the interactions of the participants. The term communication climate refers to the emotional tone of a relationship. A climate doesn't involve specific activities as much as the
way people feel about each other as they carry out those activities. Consider two communication classes, for example. Both meet for the same length of time and follow the same syllabus. It's easy to imagine how one of these classes might be a friendly, comfortable place to learn, whereas the other might be cold and tense—even hostile. The same
principle holds for families, coworkers, and other relationships: Communication climates are a function more of the way people feel about one another than of the tasks they perform. Confirming Messages What makes some climates are a function more of the way people feel about one another than of the tasks they perform. Confirming Messages What makes some climates are a function more of the way people feel about one another than of the tasks they perform.
determined by the degree to which people see themselves as valued. When we believe others view us as important, 226-257 Ch07 Adler 2/28/05 9:49 AM Page 229 CHAPTER 7 IMPROVING INTERPERSONAL RELATIONSHIPS we are likely to feel good about our relationship. On the other hand, the relational climate suffers when we think others don't
appreciate or care about us. Messages that show you are valued have been called confirming responses. In one form or another, confirming responses say "you exist," "you matter," "you're important." Actually, it's an oversimplification to talk about one type of confirming message. In truth, confirming communication occurs on three increasingly
positive levels: 2 \blacksquare Recognition The most fundamental act of confirmation is to recognize the other person. Recognition seems easy and obvious, and yet there are many times when we do not respond to others on this basic level. Failure to write or visit a friend is a common example. So is failure to return a phone message. Avoiding eye contacts
and not approaching someone you know on campus, at a party, or on the street send a negative message. Of course, this lack of recognition may simply be an oversight. You might not notice your friend, or the pressures of work and school might prevent you from staying in touch. Nonetheless, if the other person perceives you as avoiding contact, the
message has the effect of being disconfirming, Acknowledgment Acknowledgment Acknowledgment of course, counterfeit listening—ambushing, stage hogging, pseudolistening, and so on—has the opposite effect of acknowledgment. More
active acknowledgment includes asking questions, paraphrasing, and reflecting. Not surprisingly, employees rate managers who solicit their suggestion. As you read in Chapter 4, reflecting the speaker's thoughts and feelings can be a powerful way to offer support when others have
problems. Endorsement Whereas acknowledgment means you are interested in another's ideas, endorsement is the strongest type of confirming message, because it communicates the highest form of valuing. The most obvious form of endorsement is agreeing. Fortunately, it isn't
surprisingly often after you look for opportunities to compliment others. Nonverbal endorsement can also enhance the quality of a relational climate. For example, women rate men who agree with them as more physically attractive than those who fail to do so.4 It's hard to overstate the importance of confirming messages. For instance, a positive
climate is the best predictor of marital satisfaction. Satisfied couples have a 5:1 ratio of positive to negative statements, whereas the ratio for dissatisfied partners is 11.6 Positive, confirming messages are just as important in families. For example, the satisfaction that siblings feel with one another drops sharply as aggressive, disconfirming messages are just as important in families.
on the other hand: from the other point of view 229 226-257 Ch07 Adler 230 2/28/05 PART TWO 9:49 AM Page 230 INTERPERSONAL COMMUNICATION for the other person either by disputing or ignoring some important part of that person's message. Disagreement can certainly be disconfirming, especially if it goes beyond disputing the other
person's ideas and attacks the speaker personally. However, disagreement is not the most damaging kind of disconfirmation. It may be tought to hear someone say, "I don't think that's a good idea," but a personal attack like "You're crazy" is even tougher to hear. Far worse than disagreements are responses that ignore others' ideas—or even their
existence. The photo on page 228 captures both confirming messages. The two office athletes are obviously enjoying each other's company while they ignore their colleague. Not all disconfirming messages. The two office athletes are obviously enjoying each other's company while they ignore their colleague. Not all disconfirming messages. The two office athletes are obviously enjoying each other's company while they ignore their colleague. Not all disconfirming messages.
It's easy to see how each of them is inherently disconfirming. As you read in Chapter 6, every message has a relational dimension along with its content. This means that, whether or not we are aware of the fact, we send TABLE 7-1 Distancing Tactics Tactic Description Avoidance Evading the other person. Deception Lying to or misleading the other
person. Degrading Treating the other person with disrespect. Detachment Acting emotionally disinterested in the other person. Discounting Disregarding or minimizing importance of what the other person says. Humoring Not taking the other person says. Humoring Not taking the other person says.
rather than a unique individual. Inattention Not paying attention to the other person. Nonimmediacy Displaying verbal or nonverbal clues that minimize interest, closeness, or availability. Reserve Being unusually quiet and uncommunicative. Restraint Curtailing normal social behaviors. Restrict topics Limiting conversation to less personal topics.
Shorten interaction Ending conversations as quickly as possible. Adapted from J.A. Hess, "Distance Regulation in Personal Relationships: The Development of a Conceptual Model and a Test of Representational Validity." Journal of Social and Personal Relationships 19 (2002): 663-683. 226-257 Ch07 Adler 2/28/05 9:49 AM Page 231 CHAPTER 7
IMPROVING INTERPERSONAL RELATIONSHIPS and receive confirming messages virtually whenever we communicate. Serious conversations about our relationships may not be communicate about one another even when we talk about everyday matters. In other words, it isn't what we communicate about
that shapes a relational climate so much as how we speak and act toward one another. It's important to note that disconfirming messages, like virtually every other kind of communication, are a matter of perception. Communication, are a matter of perception.
other hand, even messages that aren't intended to devalue the other person can be interpreted as disconfirming. Your failure to return a phone call or respond to the letter of an out-of-town friend might simply be the result of a busy schedule; but if the other person views the lack of contact as a sign that you don't value the relationship, the effect can
be powerful. 231 CULTURAL IDIOM on the other hand: from the other point of view "what goes around," expect to be treated the way you treat others "hold on": wait the "point of no return": the stage in a process after which there is no possibility of stopping or turning back How Communication Climates Develop As soon as two
people start to communicate, a relational climate begins to develop. If the messages are confirming, the climate is likely to be a positive one. If they disconfirm one another, the climate is likely to be a positive one. If they disconfirm one another, the climate is likely to be a positive one. If they disconfirm one another, the climate is likely to be a positive one. If they disconfirm one another, the climate is likely to be a positive one. If they disconfirm one another, the climate is likely to be a positive one. If they disconfirm one another, the climate is likely to be a positive one. If they disconfirm one another, the climate is likely to be a positive one. If they disconfirm one another, the climate is likely to be a positive one. If they disconfirm one another, the climate is likely to be a positive one. If they disconfirm one another, the climate is likely to be a positive one. If they disconfirm one another, the climate is likely to be a positive one. If they disconfirm one another, the climate is likely to be a positive one. If they disconfirm one another, the climate is likely to be a positive one. If they disconfirm one another, the climate is likely to be a positive one. If they disconfirm one another, the climate is likely to be a positive one. If they disconfirm one another is likely to be a positive one. If they disconfirm one another is likely to be a positive one. If they disconfirm one another is likely to be a positive one. If they disconfirm one another is likely to be a positive one. If they disconfirm one another is likely to be a positive one. If they disconfirm one another is likely to be a positive one. If they disconfirm one another is likely to be a positive one. If they disconfirm one another is likely to be a positive one. If they disconfirm one another is likely to be a positive one. If they disconfirm one another is likely to be a positive one. If they disconfirm one another is likely to be a positive one. If they disconfirm one another is likely to be a positive one. If th
act of approaching others is confirming, whereas avoiding them can be disconfirming. Smiles or frowns, the presence or absence of eye contact, tone of voice, the use of personal space—all these and other cues send messages about how the parties feel toward one another. After a climate is formed, it can take on a life of its own and grow in a
selfperpetuating spiral: a reciprocating communication pattern in which each person's message reinforces the other esponse from the other person. This positive spirals, one partner's confirming message leads to a similar response from the other person. This positive spirals are just as powerful, though they
leave the partners feeling worse about themselves and each other. Research shows how spirals operate in relationships to reinforce the principle that "what goes around comes around." In one study of married couples, each spouse's response in conflict situations was similar to the other's statement.12 Conciliatory statements (for example,
supporting, accepting responsibilities, agreeing) were likely to be followed by conciliatory responses. Confrontational acts (such as criticism, hostile questions, and faultfinding) were likely to trigger aggressive responses. The same pattern held for other kinds of messages: Avoidance begat avoidance, analysis begat analysis, and so on. Escalatory
conflict spirals are the most visible way that disconfirming messages reinforce one another until a skirmish escalatory conflict spirals can also be destructive. 14 Rather than fighting, the parties slowly lessen their dependence on one another, withdraw
and become less invested in the relationship. Spirals rarely go on indefinitely. Most relationships pass through cycles of progression and regression. If the spiral is negative, partners may find the exchange growing so unpleasant that they switch from negative to positive messages without discussing the matter. In other cases they may engage in
metacommunication. "Hold on," one might say. "This is getting us nowhere." In some cases, however, partners pass the "point of no return," leading to the breakup of a relationship. Even The worst sin towards our fellow creatures is not to hate them, but to be indifferent to them; that's the essence of inhumanity. George Bernard Shaw 226-
257 Ch07 Adler 232 2/28/05 PART TWO 9:49 AM Page 232 INTERPERSONAL COMMUNICATION positive spirals have their limit: Even the best relationships go through periods of conflict and withdrawal, although a combination of time and communication skills can eventually bring the partners back into greater harmony. Creating Positive
Communication Climates It's easy to see how disconfirming messages can pollute a communication climate. But what are some alternative ways of communication climate a communication climate are some alternative ways of communication climate. But what are some alternative ways of communication climate are some alternative ways of communication climate.
years, Gibb was able to isolate six types of defense-arousing communication and six contrasting behaviors that seemed to reduce the level of threat and defensive ones will increase the odds of creating and maintaining positive
communication climates in your relationships. EVALUATION VERSUS DESCRIPTION The first type of defense-provoking behavior Gibb noted was evaluative communication. Most people become irritated at judgmental statements, which are likely to be interpreted as indicating a lack of regard. Evaluative language has often been described as "you"
language because most such statements contain an accusatory use of that word. For example, 🔳 🖿 You don't know what you're talking about. You're not doing your best. You smoke too much. Unlike evaluative "you'language, descriptive communication focuses on the speaker's thoughts and feelings instead of judging the listener. One form of
descriptive communication is "I" language.16 Instead of putting the emphasis on judging another's behavior, the descriptive communicator would say, "When you don't give me a chance to say what's on my mind, I get
frustrated." Notice that statements such as this inTABLE 7-2 The Gibb Categories of Defensive and clude an account of the speaker and a description of the speaker an
Problem Orientation 3. Strategy 3. Spontaneity 4. Neutrality 4. Empathy 5. Superiority 5. Equality 6. Certainty 6. Provisionalism CONTROL VERSUS PROBLEM ORIENTATION A second defense-provoking message involves some attempt to control the other person. A controlling message occurs when a sender seems to be imposing a solution on the
receiver with little regard for the receiver's needs or interests. The control can range from relatively small matters (where to eat dinner or what TV show to spend a large sum of money). 226-257 Ch07 Adler 2/28/05 9:49 AM Page 233 CHAPTER 7 IMPROVING INTERPERSONAL
RELATIONSHIPS 233 A COMPARISON OF DIALOGUE AND DEBATE People will always have disagreements. The way they handle them both creates and reflects relational climates. The following list contrasts the very different types of communication that characterize dialogue and debate. As you review them, consider how dialogue confirms the
other person, even in the face of disagreement, whereas debate is fundamentally disconfirming. 

| Image: Bola border bo
debate, winning is the goal. Dialogue enlarges and possibly changes the participants' own points of view. 

Debate affirms the participants' own points of view. Dialogue reveals assumptions for reevaluation. Debate affirms the participants' own points of view.
positions. Dialogue opens the possibility of reaching a better solution than any of the original ones. Debate defends one's own positions as the best and excludes other positions. Dialogue involves a genuine concern for the other positions as the best and excludes other positions.
relationships and often belittles or deprecates the other position. Whatever the situation, people who act in controlling ways create a defensive climate. Researchers have found that the communication of abusive couples was characterized by opposition to one another's viewpoints. 17 The unspoken message such behavior communicates is "I known that the communication of abusive couples was characterized by opposition to one another's viewpoints. 17 The unspoken message such behavior communicates is "I known that the communication of abusive couples was characterized by opposition to one another's viewpoints. 17 The unspoken message such behavior communicates is "I known that the communication of abusive couples was characterized by opposition to one another's viewpoints. 18 The unspoken message such behavior communicates is "I known that the communication of abusive couples was characterized by opposition to one another that the communication of abusive couples was characterized by opposition to one another that the communication of abusive couples was characterized by opposition to one another that the communication of abusive couples was characterized by opposition to one another than the communication of abusive couples was characterized by opposition to one another than the communication of abusive couples was characterized by opposition to one another than the communication of abusive couples was characterized by opposition to one another than the communication of abusive couples was characterized by opposition to one another than the communication of abusive couples was characterized by opposition to one another than the communication of abusive couples was characterized by opposition to one another than the communication of abusive couples was characterized by opposition to one another than the communication of abusive couples was characterized by opposition to one another than the communication of abusive couples was characterized by the communication of abusive couples was characterized by the couple of t
sidebar "A Comparison of Dialogue and Debate" above shows several important differences between controlling and problem-oriented communication. The last section of this chapter has a great deal to say about "win-win" problem solving as a way to find problem-oriented solutions. STRATEGY VERSUS SPONTANEITY The third communication
behavior that Gibb identified as creating a poor communication climate is strategy. A more accurate term to describe this type of behavior is manipulation. Manipulation explains why most people defensive is to get caugh
trying to manipulate them. Nobody likes to be a guinea pig or a sucker, and even well-meant manipulation can cause bad feelings. Spontaneity is the label Gibb used as a contrast to strategy. A better term might be honesty. Despite the misleading label, spontaneous communication needn't be blurted out as soon as an idea comes to you. You might
want to plan the wording of your message may not always get what you want, but in the long run it's likely to pay dividends in a positive relational climate. CULTURAL IDIOM to be a guinea pig or a sucker: to be taken advantage of in the
long run: over an extended period of time 226-257_Ch07_Adler 234 2/28/05 PART TWO 9:49 AM Page 234 INTERPERSONAL COMMUNICATION CULTURAL IDIOM mind is already made up: will not waiver from one's opinion NEUTRALITY VERSUS EMPATHY Gibb used the term neutrality to describe a fourth behavior that arouses defensiveness
Probably a more descriptive term would be indifference. A neutral attitude is disconfirming because it communicates a lack of concern for the welfare of another and implies that the other person isn't very important to you. The damaging effects of neutrality become apparent when you consider the hostility that most people have for the
large,impersonal organizations with which they have to deal: "They think of me as a number instead of a person"; "I felt as if I were being handled by computers and not human beings." These two common statements reflect reactions to being handled by computers and not human beings." These two common statements reflect reactions to being handled by computers and not human beings." These two common statements reflect reactions to being handled by computers and not human beings." These two common statements reflect reactions to being handled by computers and not human beings."
means accepting another's feelings, putting yourself in another's place. This doesn't mean you need to agree with that person. Gibb noted the importance of nonverbal messages in communicating empathy. He found that facial and bodily expressions of concern are often more important to the receiver than the words used. SUPERIORITY VERSUS
EQUALITY Superiority is a fifth type of communication that creates a defensive climate. When it seems that people believe they are better than ours. But your own experiences will tell you that it isn't necessary for these people to project an
attitude of superiority. Gibb found ample evidence that, although they may have greater talent in certain areas, they see others as having just as much worth as human beings. CERTAINTY VERSUS PROVISIONALISM Dogmatism
is another term for the behavior Gibb calls certainty. Messages that suggest the speaker's mind is already made up are likely to generate defensiveness. In contrast to dogmatic communication is provisionalism, in which people may have strong opinions but are willing to acknowledge that they don't have a corner on the truth and will change their
stand if another position seems more reasonable. There is no guarantee that using Gibb's supportive, confirming approach to communication will build a positive climate. But the chances for a constructive relationship will be greatest when communication will build a positive climate. But the chances for a constructive relationship will be greatest when communication will build a positive climate. But the chances for a constructive relationship will be greatest when communication will be greatest when communication will build a positive climate. Syndicate. 226-257_Ch07_Adler 2/28/05 9:49 AM Page 235 CHAPTER 7 IMPROVING INTERPERSONAL RELATIONSHIPS structive approach described here. Besides boosting the odds of getting a positive response from others, supportive communication can leave you feeling better in a variety of ways: more in control of your relationships, more
comfortable, and more positive toward others. 235 CULTURAL IDIOM boosting the odds of: increasing the chances of success to wind up in: to end up being in MANAGING INTERPERSONAL CONFLICT Even the most supportive communication climate won't guarantee complete harmony. Regardless of what we may wish for or dream about, a
conflict-free world just doesn't exist. Even the best communicators, the luckiest people, are bound to wind up in situations when their needs don't match the needs of others. Money, time, power, sex, humor, aesthetic taste, as well as a thousand other issues, arise and keep us from living in a state of perpetual agreement. For many people the
inevitability of conflict is a depressing fact. They think that the existence of ongoing conflict means that there's little chance for happy relationships with others. Effective communicators know differently, however. They realize that although it's impossible to eliminate conflict, there are ways to manage it effectively. And those effective communicators
know the subject of this chapter—that managing conflict skillfully can open the door to healthier, stronger, and more satisfying relationships. open the door to: remove barriers to dirty look: facial expression indicating displeasure The Nature of Conflict Whatever forms they may take, all interpersonal conflicts share certain similarities. Joyce Frost and
William Wilmot provide a thorough definition of conflict. They state that conflict is an expressed struggle between at least two interdependent parties who perceive incompatible goals, scarce rewards, and interference from the other parties who perceive incompatible goals. 19 A closer look at the various parts of this definition helps to develop a clearer idea of
how conflicts operate. EXPRESSED STRUGGLE A conflict doesn't exist unless both parties know that some disagreement exists. You may be upset for months because a neighbor's loud stereo keeps you from getting to sleep at night, but no conflict exists between the two of you until the neighbor learns about your problem. Of course, the expressed
struggle doesn't have to be verbal. You can show your displeasure with somebody without saying a dirty look, using the silent treatment, and avoiding the other person are all ways of expressing yourself. But one way or another, both parties must know that a problem exists before they're in conflict. PERCEIVED INCOMPATIBLE GOALS
Conflicts often look as if one party's gain will be another's loss. For instance, consider the neighbor whose music keeps you awake at night. Does somebody have to lose? A neighbor who turns down the noise loses the enjoyment of hearing the music at full volume; but if the neighbor whose music keeps you awake and unhappy. But the
goals in this situation really aren't completely incompatible—solutions do exist that allow both parties to get what they want. For instance, you could The history of man is replete with mechanisms and attempts to control aggression. People have tried to pray it away, wish it away, or play it away. More recently they have tried to psychoanalyze it away
But it does not seem to go away. George Bach and Herb Goldberg Creative Aggression 226-257 Ch07 Adler 236 2/28/05 PART TWO 9:49 AM Page 236 INTERPERSONAL COMMUNICATION achieve peace and quiet by closing your windows and getting the neighbor to do the same. You might use a pair of earplugs. Or perhaps the neighbor could get a
set of headphones and listen to the music at full volume without bothering anyone. If any of these solutions proves workable, then the conflict disappears. Unfortunately, people often fail to see mutually exclusive, they create a self-fulfilling prophecy in which
the conflict is very real. PERCEIVEDSCARCEREWARDS in a conflict, people believe there isn't enough of some resource to go around. The most obvious example of a scarce resource is money—a cause of many conflicts. If a person asks for a raise in pay and the boss would rather keep the money or use it to expand the business, then the
two parties are in conflict. Time is another scarce commodity. As authors and family men, both of us are constantly in the middle of struggles about how to use the limited time we have to spend. Should we work on this book? Visit with our wives? Spend time we have to spend struggles about how to use the limited time we have to spend. Should we work on this book? Visit with our wives? Spend time with our kids? Enjoy the luxury of being alone? With only twenty-four hours in a day we're
bound to end up in conflicts with our families, editors, students, and friends—all of whom want more of our time than we have available to give. INTERDEPENDENCE However antagonistic they might feel toward each other, the parties in a conflict are usually dependent on each other. The welfare and satisfaction of one depend on the actions of
another. If this weren't true, then even in the face of scarce resources and incompatible goals there would be no need for conflict. Interdependence exists between conflicting nations, social groups, organizations, friends, and lovers. In each case, if the two parties didn't need each other to solve the problem, both would go their separate ways. In fact
people can act when their needs are not met. Each one has very different characteristics. NONASSERTION Nonassertion is the inability or unwillingness to express thoughts or feelings in a conflict. Sometimes nonassertion is the inability or unwillingness to express thoughts or feelings in a conflict.
Sometimes people know how to communicate in a straightforward way but choose to behave nonassertively. For example, women are less likely to clearly refuse an unwanted request for physical intimacy from a dating partner who they would like to see in the future than one whom they don't want to see again.21 Nonassertion is a surprisingly
257_Ch07_Adler 2/28/05 9:49 AM Page 237 CHAPTER 7 TABLE 7-3 IMPROVING INTERPERSONAL RELATIONSHIPS 237 Individual Styles of Conflict Nonassertive Directly Aggressive Passive Aggressive Passive Aggressive Passive Aggressive Passive Aggressive Passive Aggressive Indirect Assertive Approach to Others I'm not okay, you're not okay, you're not okay, you're not okay. I'm okay, you're not okay.
manipulation Gains unwitting compliance of others Attempts "win-win" solutions Adapted with permission from The Assertive Woman © 1970, 1987, and 2000, by Stanlee Phelps and Nancy Austin, San Luis Obispo, CA: Impact, 1975, p. 11; and Gerald Piaget, American Orthopsychiatric Association, 1975. Further reproduction prohibited
Accommodation is another type of nonassertive response. Accommodators deal with conflict by giving in, putting the other's needs ahead of their own. Despite the obvious drawbacks of nonassertion, there are situations when accommodating or avoiding is a sensible approach. Avoidance may be the best course if a conflict is minor and short-lived. For
example, you might let a friend's annoying grumpiness pass without saying anything, knowing that he is having one of his rare bad days. Likewise, you might not complain to a neighbor whose lawn sprinklers occars in an unimportant relationship, as the conflict occurs in an unimportant relationship occurs in a conflict occ
with an acquaintance whose language you find offensive but whom you don't see often. Finally, you might choose to keep quiet if the risk of speaking up is too great: CULTURAL IDIOM steering clear of: avoiding to face the problem head-on: to confront the problem directly 226-257_Ch07_Adler 238 2/28/05 PART TWO 9:49 AM Page 238
INTERPERSONAL COMMUNICATION getting fired from a job you can't afford to lose, being humiliated in public, or even risking physical harm. DIRECT AGGRESSION Whereas nonasserters avoid conflicts, communicators who use direct aggression embrace them. A directly aggressive message confronts the other person in a way that attacks his or
her position—and even the dignity of the receiver. Many directly aggressive responses are easy to spot: "You don't know what you're talking about." "That was a stupid thing to do." "What's the matter with you?" Other forms of direct aggression come more from nonverbal messages than from words. It's easy to imagine a hostile way of expressing
statements like "What is it now?" or "I need some peace and quiet." Verbal aggressiveness may get you what you want in the short run. Yelling "Shut up" might stop the other person from talking, and saying "Get it yourself" may save you from some exertion; but the relational damage of this approach probably isn't worth the cost. Direct aggression
can be hurtful, and the consequences for the relationship can be long-lasting.23 PASSIVE AGGRESSION Passive aggression is far more subtle than its directly aggressive cousin. It occurs when a communicator expresses hostility in an obscure way. Psychologist George Bach terms this behavior "crazymaking"24 and identifies several varieties. For
example, "pseudoaccommodators" pretend to agree with you ("I'll be on time from now on") but don't comply with your request for change, "Guiltmakers" try to gain control by making you feel responsible for change with your request for change with your feel responsible feel res
("Where's your sense of humor?") when you object. "Trivial tyrannizers" do small things to drive you crazy instead of confronting you with their partners by keeping back something valuable, such as courtesy, affection, or humor
CULTURAL IDIOM in the short run: over a brief period of time to save face: to protect one's dignity INDIRECT COMMUNICATION The clearest communication is not necessarily the best approach. Indirect communication lacks thereof to save face for the recipient.25 Although indirect communication lacks thereof to save face for the recipient and indirect communication lacks thereof to save face for the recipient and indirect communication lacks thereof to save face for the recipient and indirect communication lacks thereof to save face for the recipient and indirect communication lacks thereof to save face for the recipient and indirect communication lacks thereof to save face for the recipient and indirect communication lacks thereof to save face for the recipient and indirect communication lacks thereof to save face for the recipient and indirect communication lacks thereof to save face for the recipient and indirect communication lacks thereof the recipient and indirect communication lacks the recipient and indirect communic
clarity of an aggressive or assertive message, it involves more initiative than nonassertion. It also has none of the hostility of passive-aggressive crazymaking. The goal is to get what you want without arousing the hostility of passive-aggressive crazymaking. The goal is to get what you want without arousing the hostility of passive-aggressive crazymaking. The goal is to get what you want without arousing the hostility of passive-aggressive crazymaking.
conversation with the owners and ask if anything you are doing is too noisy for them, hoping they would get the hint. Because it saves face for the other party, indirect communication is often kinder than blunt honesty. If your guests are staying too long, it's probably kinder to yawn and hint about your big day tomorrow than to bluntly ask them to
leave.Likewise, 226-257_Ch07_Adler 2/28/05 9:49 AM Page 239 CHAPTER 7 IMPROVING INTERPERSONAL RELATIONSHIPS if you're not interested in going out with someone who has asked you for a date, it may be more compassionate to claim that you're busy than to say "I'm not interested in seeing you." At other times we communicate
indirectly in order to protect ourselves. You might, for example, test the waters by hinting instead of directly asking the boss for a raise, or by letting your partner know indirectly that you could use some affection instead of asking outright. At times like these, an oblique approach may get the message across while softening the blow of a negative
response. The advantages of protecting oneself and saving face for others help explain why indirect message, of course, is that the other party will misunderstand you or fail to get the message at all. There are also times when the importance of an idea is so great
that hinting lacks the necessary punch. When clarity and directness are your goals, an assertive approach is in order. ASSERTION Assertive people handle conflicts by expressing their needs, thoughts, and feelings clearly and directness are your goals, an assertive approach is in order.
problems to everyone's satisfaction. Possessing this attitude and the skills to bring it about doesn't guarantee that assertive communicators will always get what they want, but it does give them the best chance of doing so. An additional benefit of such an approach is that whether or not it satisfies a particular need, it maintains the self-respect of both
the assertors and those with whom they interact. As a result, people who manage their conflicts assertiveness or aggression. ETHICAL
CHALLENGE CHOOSING AN ETHICAL CONFLICT STYLE 239 CULTURAL IDIOM test the waters: try oblique: evasive, indirect softening the blow of: easing the effect of punch: force or effectiveness Not everything that is faced can be changed, but nothing can be changed until it is faced. James Baldwin At first glance, assertiveness seems like the
most ethical communication style to use when you are faced with a conflict. The matter might not be so clear, however. Find out for yourself by following these steps. 1. Decide for yourself whether it is ever justifiable to use each of the other conflict styles: nonassertion, direct aggression, passive aggression, and indirect communication. Support yourself by following these steps. 1.
position on each style with examples from your own experience. 2. Explain your answer to classmates who disagree, and listen to their arguments. 3. After hearing positions that differ from yours, work with your classmates to develop a code of ethics for expressing conflict messages. Characteristics of an Assertive Message Knowing about assertive
messages isn't the same as being able to express them. The next few pages will describe a method for communicating assertively. It works for a variety of messages: your hopes, problems, complaints, and appreciations. Besides giving you a way to express yourself directly, this format also 226-257 Ch07 Adler PART TWO 9:49 AM Page 240
INTERPERSONAL COMMUNICATION Source: CATHY © 2004 Cathy Guisewite. Reprinted with permission of UNIVERSAL PRESS SYNDICATE. All rights reserved. 240 2/28/05 makes it easier for others to understand you. A complete assertive message has five parts: 1. BEHAVIORAL DESCRIPTION As you learned in Chapter 3, a behavioral
description is an objective picture of the behavior in question, without any judging or editorializing. Put in terms of Gibb's categories, it uses descriptive rather than evaluative language. Notice the difference between a behavioral descriptive rather than evaluative language.
for: trying to get another to say what one wants to hear Behavioral description: "You asked me to tell you what I really thought about your idea, and then when I gave it to you, you told me I was too critical." Evaluative judgment: "Don't be so touchy! It's hypocritical to ask for my opinion and then get mad when I give it to you." Judgmental words like
"touchy" and "hypocritical" invite a defensive reaction. The target of your accusation can reply "I'm not touchy or hypocritical!"It's harder to argue with the facts stated in an objective, behavioral description. Furthermore, the neutral language reduces the chances of a defensive reaction. 2. YOUR INTERPRETATION OF THE OTHER PERSON'S
BEHAVIOR After describing the behavior in question, an assertive message expresses the communicator's interpretation. This is where you can use the perception checking skill out- 226-257_Ch07_Adler 2/28/05 9:49 AM Page 241 CHAPTER 7 IMPROVING INTERPERSONAL RELATIONSHIPS lined in Chapter 2 (pages 46-48). Remember that a
complete perception check includes two possible interpretation A: "Maybe you reacted defensively because my criticism sounded too detailed—because my standards seemed too high." Interpretation B: "Your reaction made me think that you really didn't want to know my opinion: You were just fishing for a
compliment when you asked my opinion." Whether you offer two interpretations (as in the previous list) or just one (as in the examples that follow), the key is to label your hunches as such instead of suggesting that you are positive about what the other person's behavior means. 3. A DESCRIPTION OF YOUR FEELINGS Expressing your feelings addsorption.
a new dimension to a message. For example, consider the difference between these two responses: 

"When you kiss me and nibble on my ear while we're watching television [behavior], I think you probably want to make love [interpretation], and I feel excited." "When you kiss me and nibble on my ear while we're watching television [behavior], I think you probably want to make love [interpretation], and I feel excited." "When you kiss me and nibble on my ear while we're watching television [behavior], I think you probably want to make love [interpretation], and I feel excited." "When you kiss me and nibble on my ear while we're watching television [behavior], I think you probably want to make love [interpretation], and I feel excited." "When you kiss me and nibble on my ear while we're watching television [behavior], I think you probably want to make love [interpretation], and I feel excited." "When you kiss me and nibble on my ear while we're watching television [behavior], I think you probably want to make love [interpretation], and I feel excited." "When you kiss me and nibble on my ear while we're watching television [behavior], I think you probably want to make love [interpretation], and I feel excited." "When you kiss me and nibble on my ear while we're watching television [behavior], I think you probably want to make love [interpretation], and I feel excited." "When you kiss me and nibble on my ear while we're watching television [behavior], I think you probably want to make love [interpretation], and I feel excited." "When you kiss me and nibble on my ear while we're watching television [behavior], I think you probably want to make love [interpretation], and I feel excited." "When you kiss me and nibble on my ear while we're watching television [behavior], I think you probably want to make love [interpretation], and I feel excited." "When you kiss me and nibble on my ear while we're watching television [behavior], I feel excited." "When you kiss me and nibble on my ear while we're watching television [behav
think you probably want to make love [interpretation], and I feel disgusted." Likewise, adding feelings to the situation we have been examining makes the assertive message more clear: | "When you said I was too critical after you asked me for my honest opinion [behavior], it seemed to me that you really didn't want to hear a critical remark
[interpretation], and I felt stupid for being honest [feeling]." 4. A DESCRIPTION OF THE CONSEQUENCES A consequence statement explains what happens as a result of the behavior you have described, your interpretation, and the ensuing feeling. There are three kinds of consequences:
me the phone message yesterday [behavior], I didn't know that my doctor's appointment was delayed, and I wound up sitting in the office for an hour when I could have been studying or working [consequences]. It seems to me that you don't care enough about how busy I am to even write a simple note [interpretation], and that's why I got so mad.
[feeling]." "I appreciate [feeling] the help you've given me on my term paper [behavior]. It tells me you think I'm on the right track [interpretation], and this gives me a boost to keep working on the idea [consequences]."
[behavior], you start to act strange: You make crude jokes that offend everybody, and on the way home you drive poorly [consequences]. I don't think you realize how differently you act [interpretation], and I'm worried [feeling] about what will happen if you don't drink less."
hear her cry [interpretation], but when you rehearse your lines for the play without closing the doors [behavior], the baby can't sleep [consequence]. I'm especially concerned [feeling] about her because she's had a cold lately." 241 226-257_Ch07_Adler 242 2/28/05 PART TWO 9:49 AM Page 242 INTERPERSONAL COMMUNICATION "I thought you'd
want to know [interpretation] that when you kid Bob about his height [behavior], he gets embarrassed [feeling] and usually quiets down or leaves [consequences]." A consequence statement for our ongoing example might sound like this:
really didn't want to hear a critical remark [interpretation]. I felt stupid for being honest [feeling]. Now I'm not sure whether I should tell you what I'm really thinking the next time you ask [consequence]." 5. A STATEMENT OF YOUR INTENTIONS Intention statements are the final element in the assertive format. They can communicate three kinds of
messages: Where you stand on an issue: "When you call us 'girls' after I've told you we want to be called 'women' [behavior], I get the idea you don't appreciate how important the difference is to us [interpretation] and how demeaning it feels [feeling]. Now I'm in an awkward spot: Either I have to keep bringing the subject up, or else drop it and
feel bad [consequence]. I want you to know how much this bothers me [intention]. "I'm really grateful [feeling] to you for speaking up for me in front of the boss yesterday [behavior]. That must have taken a lot of confidence [consequence], and I want you to know how much like bothers me a lot of confidence [consequence].
appreciate your support [intention]." 

Requests of others: "When you didn't call last night [behavior] I thought you were mad at me [interpretation]. I'd like to know whether you are angry [intention]." 

Requests of others: "When you didn't call last night [behavior], and I'm glad you were mad at me [interpretation]." 

Requests of others: "When you didn't call last night [behavior] I thought you were mad at me [interpretation]." 

Requests of others: "When you didn't call last night [behavior] I thought you were mad at me [interpretation]." 

Requests of others: "When you didn't call last night [behavior] I thought you were mad at me [interpretation]." 

Requests of others: "When you didn't call last night [behavior] I thought you were mad at me [interpretation]." 

Requests of others: "When you didn't call last night [behavior] I thought you were mad at me [interpretation]." 

Requests of others: "When you didn't call last night [behavior] I thought you were mad at me [interpretation]." 

Requests of others: "When you didn't call last night [behavior] I thought you were mad at me [interpretation]." 

Requests of others: "When you didn't call last night [behavior] I thought you were mad at me [interpretation]." 

Requests of others: "When you didn't call last night [behavior] I thought you were mad at me [interpretation]." 

Requests of others: "When you didn't call last night [behavior] I thought you were mad at me [interpretation]." 

Requests of others: "When you didn't call last night [behavior] I thought you were mad at me [interpretation]." 

Requests of others: "When you didn't call last night [behavior] I thought you were mad at me [interpretation]." 

Requests of others: "When you didn't call last night [behavior] I thought you were mad at me [interpretation]." 

Requests of others: "When you didn't call last night you were mad at me [interpretation]." 

Requests of others: "When you didn't call last night you were mad at me [interpretation]." 

Requests of others: "When you didn't call last night y
had a good time, too [interpretation]. I hope you'll come again [intention]." 

Descriptions of how you plan to act in the future: "I've asked you to repay the twenty-five dollars I lent you three times now [behavior]. I'm getting the idea that you've been avoiding me [interpretation], and I'm pretty angry about it [feeling]. I want you to know that unless
Thanks for the invitation, but I really should study Saturday night." (Does the speaker want to be asked out again, or is he indirectly suggesting that he doesn't ever want to go out with you?) "To tell you the truth, I was asleep when you came by, but I should have been up anyway." (Is the speaker saying that it's okay to come by in the future, or
is she hinting that she doesn't appreciate unannounced visitors?) You can see from these examples that it's often hard to make a clear interpretation of another person's ideas without a direct statement of intention. Notice how much more direct statement of intention. Notice how much more direct statement of intention of another person's ideas without a direct statement of intention. Notice how much more direct statement of intention of another person's ideas without a direct statement of intention.
Page 243 CHAPTER 7 Im IMPROVING INTERPERSONAL RELATIONSHIPS "Thanks for the invitation, but I really should study Saturday night. I hope you'll ask me again soon." "To tell you the truth, I was asleep when you came by, but I should have been up anyway. Maybe the next time you should phone before dropping in so I'll be sure to be
awake." In our ongoing example, adding an intention statement would complete the assertive message: 

"When you said I was too critical after you asked me for my honest opinion [behavior], it seemed to me that you really didn't want to hear a critical remark [interpretation]. That made me feel stupid for being honest [feeling]. Now I'm not sure
whether I should tell you what I'm really thinking the next time you ask [consequence]. I'd like to get it clear right now: Do you really want me to tell you what I think or not [intention]?" Before you try to deliver messages using the assertive format outlined here, there are a few points to remember. First, it isn't necessary or even wise always to put the
elements in the order described here. As you can see from reviewing the examples on the preceding your feelings. In other cases, you can start by sharing your intentions or interpretations or by describing consequences. You also ought to word your message in a way that suits your style of speaking
Instead of saying, "I interpret your behavior to mean," you might choose to say, "I think . . . "or "It seems to me . . . "It's important that you get your message across, but you should do it in a
way that sounds and feels genuine to you. Realize that there are some cases in which you can combine two elements in a single phrase. For instance, the statement "... and ever since then I've been wanting to talk to you" expresses both a consequence and an intention. In the same way, saying, ". . . and after you said that, I felt confused" expresses a
consequence and a feeling. Whether you combine elements or state them separately, the important point is to be sure that each one is present in your statement. Finally, you need to realize that it isn't always possible to deliver messages such as the ones here all at one time, wrapped up in neat paragraphs. It will often be necessary to repeat or restate
one part many times before your receiver truly understands what you're saying. As you've already read, there are many types of psychological and physical noise that make it difficult for us to understands everything you've said. In
competitive, whereas females are more cooperative, or at least less directly aggressive. Studies of children from preschool to early adolescence have shown that boys typically try to get their way by ordering one another around: "Lie down." "Get off my steps." "Gimme your arm." By contrast, girls are more likely to make proposals for action, beginning
with the word "Let's.""Let's go find some.""Let's go find some.""Let's go find some.""Let's more commonly ask each other what role to take in pretend play ("Come on, be a doctor"), girls more commonly ask each other
what role they want ("Will you be the patient for a few minutes?") or make a joint proposal ("We can both be doctors"). Furthermore, boys often make demands without offering an explanation ("We gotta clean 'em first . . .'cause they got
germs"). When girls do have conflicts and disagreements, they are more likely to handle them via indirect aggression such as excluding someone from peer groups and complaining to others. 28 Gender isn't the only variable that determines how children will handle conflict. For example, girls are more likely to assert themself with boys when their
friends are also present.29 Differences like these often persist into adulthood. One survey of college students revealed that men and women viewed conflicts in contrasting ways.30 Regardless of their cultural background, female students revealed that men and women viewed conflicts in contrasting ways.30 Regardless of their cultural background, female students revealed that men and women viewed conflicts in contrasting ways.30 Regardless of their cultural background, female students revealed that men and women viewed conflicts in contrasting ways.30 Regardless of their cultural background, female students revealed that men and women viewed conflicts in contrasting ways.30 Regardless of their cultural background, female students revealed that men and women viewed conflicts in contrasting ways.30 Regardless of their cultural background, female students revealed that men and women viewed conflicts in contrasting ways.30 Regardless of their cultural background, female students revealed that men and women viewed conflicts in contrasting ways.30 Regardless of their cultural background, female students revealed that men and women viewed conflicts in contrasting ways.30 Regardless of their cultural background, female students revealed that men and women viewed conflicts in contrasting ways.30 Regardless of their cultural background ways.30 Regardless of their c
better listeners"; "Women try to solve problems without controlling the other person"; and "Females are more concerned with others' feelings." Research confirms some of these reports.31 Limited evidence suggests that women are more likely to
compromise and give in to maintain relational harmony. Men, by contrast, are more likely to use aggression to get their way. 226-257 Ch07 Adler 2/28/05 9:49 AM Page 245 CHAPTER 7 IMPROVING INTERPERSONAL RELATIONSHIPS After a relational conflict begins, men are often more likely to use aggression to get their way.
the status quo, they protect their situation by withdrawing. To understand this "demand-withdraw" dynamic, consider a stereotypical housekeeping situation in which the woman's plight for the better, whereas avoiding the discussion enables the man
to maintain his situation. Differences like these don't mean that men are incapable of forming good relationships. Instead, the stereotypical male notion of what a good relationship is differs from the stereotypical female notion. For some men, friendship and aggression aren't mutually exclusive. In fact, many strong male relationships are built around
differences in conflict style is socialization. 34 Some social scientists have proposed that a "threshold of assertive way up to a point, but no further. Because women, allowing them to behave in an assertive way up to a point, but no further. Because women, allowing them to behave in an assertive way up to a point, but no further. Because women, allowing them to behave in an assertive way up to a point, but no further.
reaching this threshold sooner than men, at which time they would back off. Because men have been expected to be more assertive—or even aggressive—they find it more comfortable to persist in seeking to meet their needs. As sex-role stereotyping becomes less common, it is likely that the differences between male and female conflict styles may
become smaller. Cultural Influences on Conflict The ways in which people communicate during conflicts vary widely from one culture, in traditional African-American culture, another. The kind of rational, straight-talking, calm yet assertive approach that characterizes Euro-American disagreements is not the norm in other cultures. For example, in traditional African-American culture, and the norm in other cultures approach that characterizes Euro-American disagreements is not the norm in other cultures.
conflict is characterized by a greater tolerance for expressions of intense emotions than is the rational, calm model taught in mainstream U.S. culture.36 Ethnicity isn't the only factor that shapes a communicator's preferred conflict style: The degree of assimilation also plays an important role. For example, Latino Americans with strong cultural
identities tend to seek accommodation and compromise more than those with weaker cultural ties.37 Not surprisingly, people from different regions often manage conflict quite differently. In individualistic cultural ties.37 Not surprisingly, people from different regions often manage conflict quite differently. In individualistic cultural ties. 37 Not surprisingly, people from different regions often manage conflict quite differently. In individualistic cultures like that of the United States, the goals, rights, and needs of each person are considered important, and most people would agree that it is
an individual's right to stand up for himself or herself. By contrast, collectivist cultures (more common in Latin America and Asia) consider the concerns of the group to be more important than those of any individual. In these cultures, the kind of assertive behavior that might seem perfectly appropriate to a North American would seem rude and
insensitive. 245 CULTURAL IDIOM back off: stop, quit what they are doing 226-257 Ch07_Adler 246 2/28/05 PART TWO 9:49 AM Page 246 INTERPERSONAL COMMUNICATION CULTURAL IDIOM preserving and honoring the face: protecting and respecting the other's dignity. "beating around the bush": approaching something in an indirect way
CRITICAL THINKING PROBE VALUING DIVERSITY IN CONFLICT STYLES Another factor that distinguishes the assertiveness that is so valued by North Americans and northern Europeans from other cultures is the difference between high- and low-context cultural styles.38 Low-context cultures like that of the United States place a premium on
being direct and literal. By contrast, highcontext cultures like that of Japan value self-restraint and avoid confrontation. Communicators in these cultures derive meaning from a variety of unspoken rules, such as the context, social conventions, and hints. Preserving and honoring the face of the other person are prime goals, and communicators go to
great lengths to avoid any communication that might risk embarrassing a conversational partner. For this reason, what seems like "beating around the bush" to an American would be too straightforward. 39 A more indirect statement like "it is somewhat cold
today" would be more appropriate. To take a more important example, Japanese are reluctant to simply say "no"to a request. A more likely answer would be "Let me think about it for a while," which anyone familiar with Japanese culture would recognize as a refusal. When indirect communication is a cultural norm, it is unreasonable to expect more
straightforward approaches to succeed. It isn't necessary to look at Eastern cultures to encounter cultures to
Greece, for example, often think they are witnessing an argument when they are overhearing a friendly conversation. 40 A comparative study of American and Italian nursery school children showed that one of the Italian children's favorite pastimes was a kind of heated debating that Italians call discussione, which Americans would regard as arguing
Likewise, research has shown that working-class Jewish speakers of eastern European origin used arguments as a means of being sociable. Within the United States, the ethnic background of communicators also plays a role in their ideas about conflict. When African-American, Mexican-American, and white American college students were asked about
their views regarding conflict, some important differences emerged.41 For example, white Americans describe the short- and long-term dangers of disagreeing. Whites' willingness to experience conflicts may be part of their individualistic, low-context
communication style of speaking directly and avoiding uncertainty. It's not surprising that people from more collective, high-context cultures that emphasize harmony among people with close relationships tend to handle conflicts in less direct ways. With differences like these, it's easy to imagine how two friends, lovers, or fellow workers from
different cultural backgrounds might have trouble finding a conflict style that is comfortable for them both. The preceding section made it clear that conflict styles are shaped by social and cultural influences. Choose a conflict style different from yours—by virtue of gender or culture—and identify the assumptions on which it is based. Next, suggest
how people with different styles can adapt their assumptions and behaviors to communicate in a more satisfying manner. 226-257 Ch07 Adler 2/28/05 9:49 AM Page 247 CHAPTER 7 IMPROVING INTERPERSONAL RELATIONSHIPS Methods of Conflict Resolution No matter what the relational style, gender, or culture of the participants, every
conflict is a struggle to have one's goals met. Sometimes that struggle succeeds, and at other times it fails. In the remainder of this chapter we'll look at various approaches to resolving conflicts and see which ones are most promising. Source: © The New Yorker Collection 1997 J. B. Handelsman from cartoonbank.com. All Rights Reserved. WIN-LOSE
Win-lose conflicts are ones in which one party achieves its goal at the expense of the other. People resort to this method of resolving disputes when they perceive a situation as being an "either-or" one: Either I get what I want, or you get your way. The most clear-cut examples of win-lose situations are certain games, such as baseball or poker, in
which the rules require a winner and a loser. Some interpersonal issues seem to fit into this win-lose framework: two coworkers seeking a promotion to the same job, for instance, or a couple who disagree on how to spend their limited money. Power is the distinguishing characteristic in win-lose problem solving, because it is necessary to defeat an
opponent to get what you want. The most obvious kind of power is physical. Some parents threaten their children with warnings such as "Stop misbehaving, or I'll send you to your room." Adults who use physical power to deal with each other usually aren't so blunt, but the legal system is the implied threat: "Follow the rules, or we'll lock you up." 247
226-257 Ch07 Adler 248 2/28/05 PART TWO 9:49 AM Page 248 INTERPERSONAL COMMUNICATION CULTURAL IDIOM "it takes two to tango": it takes two people to cause disagreement The Navajo definition of conflict resolution is to restore harmony. Their experience has convinced them that if one ends a dispute by having a winner and a loser,
one dispute may have been ended but another dispute surely will have been started because harmony will not have been restored. Behind this is the Navajo recognition that coercion works only as long as one is willing and able to
continue the coercion. When the coercion stops, people generally revert to their prior ways, the only real difference being that by then they will have become angry and resentful. Coercion is a short-term, not a long-term answer. Anne Kaas The Better Way: Navajo Peacemaking Real or implied force isn't the only kind of power used in conflicts. People
who rely on authority of many types engage in win-lose methods without ever threatening physical coercion. In most jobs, supervisors have the power to fire an unsatisfactory employee. Teachers can use the power of
grades to coerce students to act in desired ways. Even the usually admired democratic principle of majority rule is a win-lose method of resolving conflicts. However fair it may be, this system results in one group's getting its way and another group's being unsatisfied. There are some circumstances when win-lose problem solving may be necessary,
such as when there are truly scarce resources and where only one party can achieve satisfaction. For instance, if two suitors want to marry the same person, only one can succeed. And to return to an earlier example, it's often true that only one applicant can be hired for a job. But don't be too willing to assume that your conflicts are necessarily win-
lose: As you'll soon read, many situations that seem to require a loser can be resolved to everyone's satisfaction. There is a second kind of situation when win-lose is the best method. Even when cooperation is possible, if the other person insists on trying to defeat you, then the most logical response might be to defend yourself by fighting back."It
takes two to tango," the old cliché goes, and it also often takes two to cooperate. A final and much less frequent justification for trying to defeat another person is the only way to stop the wrongful behavior. Few people would deny the importance of
restraining a person who is deliberately harming others even if the aggressor's freedom is sacrificed in the process. Forcing wrongdoers to behave themselves is dangerous because of the wide difference in opinion between people about who is right. Given this difference, it would seem justifiable to coerce others into behaving as we
think they should only in the most extreme circumstances. LOSE-LOSE In lose-lose problem solving, neither side is satisfied with the outcome. Although the name of this approach is so discouraging that it's hard to imagine how anyone could willingly use it, in truth lose-lose is a fairly common way to handle conflicts. In many instances the parties will
both strive to be winners, but as a result of the struggle, both end up losers. On the interpart and a damaged national consciousness hasn't truly won much. On an interpersonal level the same principle holds true.
Most of us have seen battles of pride in which both parties at least some of what they wanted, though both sacrifice part of their goals. People usually settle for compromises when they see partial satisfaction as the best they can hope for. Although a
compromise may be better than losing everything, this approach hardly seems to deserve the positive image it has with some people. In his valuable book on conflict resolution, management consultant Albert Filley makes an interesting observation about our attitudes toward this approach. 42 Why is it, he asks, that if someone says, "I will compromise my
values," we view the action unfavorably, yet we talk admiringly about parties in a con- 226-257 Ch07 Adler 2/28/05 9:49 AM Page 249 CHAPTER 7 IMPROVING INTERPERSONAL RELATIONSHIPS flict who compromise to reach a solution? Although compromises may be the best obtainable result in some conflicts, it's important to realize that both
people in a dispute can often work together to find much better solutions. In such cases compromise is a negative word. Most of us are surrounded by the results of bad compromises. Consider a common example: the conflict between one person's desire to smoke cigarettes and another's need to breathe clean air. The win-lose outcomes of this conflict
are obvious: Either the smoker abstains, or the nonsmoker gets to enjoy only a rare cigarette or must retreat outdoors and in which the smoker gets to enjoy only a rare cigarette or must retreat outdoors and in which the smoker gets to enjoy only a rare cigarette or must retreat outdoors and in which the smoker gets to enjoy only a rare cigarette or must retreat outdoors and in which the smoker gets to enjoy only a rare cigarette or must retreat outdoors and in which the smoker gets to enjoy only a rare cigarette or must retreat outdoors and in which the smoker gets to enjoy only a rare cigarette or must retreat outdoors and in which the smoker gets to enjoy only a rare cigarette or must retreat outdoors and in which the smoker gets to enjoy only a rare cigarette or must retreat outdoors and in which the smoker gets to enjoy only a rare cigarette or must retreat outdoors and in which the smoker gets to enjoy only a rare cigarette or must retreat outdoors and in which the smoker gets to enjoy only a rare cigarette or must retreat outdoors and in which the smoker gets to enjoy only a rare cigarette or must retreat outdoors and in which the smoker gets to enjoy only a rare cigarette or must retreat outdoors and in which the smoker gets to enjoy only a rare cigarette or must retreat outdoors.
comfort and goodwill. Of course, the costs involved in other compromises are even greater. For example, if a divorced couple compromise on child care by haggling over custody and then finally grudgingly agree to split the time with their children, it's hard to say that anybody has won. CULTURAL IDIOM haggling over: arguing about WIN-WIN In
win-win problem solving, the goal is to find a solution that satisfies the needs of everyone involved. Not only do the parties avoid trying to win at the other's expense, but also they believe that by working together it is possible to find a solution that allows both to reach their goals. Source: CALVIN and HOBBES © 1995 Watterson. Distributed by
UNIVERSAL PRESS SYNDICATE. Reprinted with permission. All Rights Reserved. 249 226-257 Ch07 Adler 250 2/28/05 PART TWO 9:49 AM Page 250 INTERPERSONAL COMMUNICATION Some compromises approach this win-win ideal. You and the seller might settle on a price for a used car that is between what the seller was asking and what you
wanted to pay. Although neither of you got everything you wanted, the outcome would still leave both of you in order to spend an evening together. As long as everyone is satisfied with an outcome, it's accurate to describe it as a win-win
solution. Although compromises can be a type of win-win outcome, the best solutions are ones in which all the parties get everything they want. Although a win-win approach to take when facing a conflict. There will
certainly be times when compromising is the most sensible approach. You will even encounter instances when pushing for your own solution is reasonable. Even more surprisingly, you will probably discover that there are times when it makes sense to willingly accept the loser's role. Steps in Win-Win Problem Solving Although win-win problem solving
is often the most desirable approach to managing conflicts, it is also one of the hardest to achieve. In spite of the challenge, it is definitely possible to become better at resolving conflicts in a win-win manner, so that both you and others have your
needs met. As you learn to use this approach, you should find that more and more of your conflicts end up with win-win solutions. And even when total satisfaction isn't possible, this approach, you should find that more and more of your conflicts end up with win-win problem solving is a highly structured activity. After you have practiced the approach
a number of times, this style of managing conflict will become almost second nature to you. You'll then be able to approach your conflicts without the need to follow the step-by-step approach. But for the 226-257 Ch07 Adler 2/28/05 9:49 AM Page 251 CHAPTER 7 IMPROVING INTERPERSONAL RELATIONSHIPS time being, try to be patient, and
trust the value of the following pattern. As you read on, imagine yourself applying it to a problem that is causing conflict is yours. Whether you want to
return an unsatisfactory piece of merchandise, complain to noisy neighbors because your sleep is being disturbed, or request a change in working conditions from your employer, the problem is yours. Why? Because in each case you are the person who is dissatisfied. You are the one who has paid for the defective article; the merchant who sold it to you
has the use of your good money. You are the one who is losing sleep as a result of your neighbors' activities; they are content to go on as before. You, not your boss, are the one who is unhappy with your working conditions. Realizing that the problem is yours will make a big difference when the time comes to approach your partner. Instead of feeling
and acting in an evaluative way, you'll be more likely to share your problem in a descriptive way, which will not only be more accurate but also will reduce the chance of a defensive reaction. After you realize that the problem is yours, the next step is to identify the unmet needs that leave you feeling dissatisfied. Sometimes a relational need underlies
the content of the issue at hand. Consider these cases: I rolling in: possessing large amounts of Let us begin anew, remembering on both sides that civility is not a sign of weakness. John F. Kennedy A friend hasn't returned some money you lent long ago. Your apparent need in this situation might be to get the cash back. But a little thought will
probably show that this isn't the only, or even the main, thing you want. Even if you were rolling in money, you'd probably want the loan repaid because of your friend's taking advantage of your friend's taking advantage of your most important need: to avoid feeling victimized by your friend's taking advantage of your most important need: to avoid feeling victimized by your friend's taking advantage of your friend's taking advantage of your most important need: to avoid feeling victimized by your friend's taking advantage of your most important need: to avoid feeling victimized by your friend's taking advantage of your most important need: to avoid feeling victimized by your friend's taking advantage of your most important need: to avoid feeling victimized by your friend's taking advantage of your most important need: to avoid feeling victimized by your friend's taking advantage of your most important need: to avoid feeling victimized by your friend's taking advantage of your most important need: to avoid feeling victimized by your friend's taking advantage of your most important need: to avoid feeling victimized by your friend's taking advantage of your most important need: to avoid feeling victimized by your friend's taking advantage of your most important need: to avoid feeling victimized by your friend's taking advantage of your most important need: to avoid feeling victimized by your friend's taking advantage of your most important need: to avoid feeling victimized by your friend's taking advantage of your most important need: to avoid feeling victimized by your friend's taking advantage of your most important need: to avoid feeling victimized by your friend's taking advantage of your most important need: to avoid feeling victimized by your friend's taking advantage of your most important need: to avoid feeling victimized by your friend's taking advantage of your most important need: to avoid feeling victimized by your friend's taking advantage of your most important need: to avoid feeling victimized by yo
When the issue is not important enough to negotiate at length When the other person is not willing to seek a win-win outcome 3. Consider competing:
long-term relationship between you and the other person is important When the other person is willing to cooperate 226-257 Ch07 Adler 252 2/28/05 PART TWO 9:49 AM Page 252 INTERPERSONAL COMMUNICATION CULTURAL IDIOM frame of mind: mood, mental state to "jump": to attack 
Someone you care about who lives in a distant city
has failed to respond to several letters. Your apparent need may be to get answers to the questions you've written about, but it's likely that there's another, more fundamental need: the reassurance that you're still important enough to deserve a response. As you'll soon see, the ability to identify your real needs plays a key role in solving interpersonal
problems. For now, the point to remember is that before you voice your problem to your partner, you ought to be clear about which of your needs aren't being met. MAKE A DATE Unconstructive fights often start because the initiator confronts a partner who isn't ready. There are many times when a person isn't in the right frame of mind to face a
```

conflict: perhaps owing to fatigue, being in too much of a hurry to take the necessary time, upset over another problem. If you do persist, you'll probably have an ugly fight on your hands. After you have a clear idea of

```
the problem, approach your partner with a request to try to solve it. For example: "Something's been bothering me. Can we talk about it?" If the answer is "yes", then you're ready to go further. If it isn't the right time to confront your partner can't
possibly meet your needs without knowing why you're upset and what you want. Therefore, it's up to you to describe your problem as specifically as possible. When you do so, it's important to use terms that aren't overly vague or abstract. Recall our discussion of behavioral descriptions in Chapter 3 when clarifying your problem and needs. PARTNER
CHECKS BACK After you've shared your problem and described what you need, it's important to make sure that your partner has understood what you've said. As you can remember from the discussion of listening in Chapter 4, there's a good chance—especially in a stressful conflict situation—of your words being misinterpreted. It's usually
unrealistic to insist that your partner paraphrase your problem statement, and fortunately there are more tactful and subtle ways to make sure you've been understood. For instance, you might try saying, "I'm not sure I expressed myself very well just now—maybe you should tell me what you heard me say so I can be sure I got it right." In any case, be
absolutely sure that your partner understands your whole message before going any further. Legitimate agreements are tough enough, but there's no point in getting upset about a conflict that doesn't even exist. SOLICIT PARTNER'S NEEDS After you've made your position clear, it's time to find out what your partner needs in order to feel satisfied
about this issue. There are two reasons why it's important to discover your partner's needs. First, it's fair. After all, the other person has just as much right as you to feel satisfied, and if you expect help in meeting your needs, then it's reasonable that you behave in the same way. Second, just as an unhappy partner will make it hard for you to become
satisfied, a happy one will be more likely to cooperate in letting you reach 226-257 Ch07 Adler 2/28/05 9:49 AM Page 253 CHAPTER 7 IMPROVING INTERPERSONAL RELATIONSHIPS your partner's needs simply by asking about them: "Now
I've told you what I want and why. Tell me what you need to feel okay about this." After your partner begins to talk, your job is to use the listening skills discussed earlier in this book to make sure you understand. 253 CULTURAL IDIOM to keep on top of: to be in control of CHECK YOUR UNDERSTANDING OF PARTNER'S NEEDS Paraphrase or ask
questions about your partner's needs until you're certain you understand them. The surest way to accomplish this is to use the paraphrasing skills you learned in Chapter 4. NEGOTIATE A SOLUTION Now that you and your partner understand each other's needs, the goal becomes finding a way to meet them. This is done by trying to develop as many
potential solutions as possible and then evaluating them to decide which one best meets the needs of both. The following steps can help communicators develop a mutually satisfying solution. 1. Identify and Define the Conflict. We've discussed this process in the preceding pages. It consists of discovering each person's problem and needs, setting the
stage for meeting all of them. 2. Generate a Number of Possible Solutions. In this step the partners work together to think of as many means as possible to reach their stated ends. The key word here is quantity: It's important to generate as many ideas as you can think of without worrying about which ones are good or bad. Write down every thought
that comes up, no matter how unworkable; sometimes a farfetched idea will lead to a more workable one. 3. Evaluate the Alternative Solutions. This is the time to talk about which solutions will work and which ones won't. It's important for all concerned to be honest about their willingness to accept an idea. If a solution is going to work, everyone
involved has to support it. 4. Decide on the Best Solution. Now that you've looked at all the alternatives, pick the one that looks best to everyone. It's important to be sure everybody understands the solution and is willing to try it out. Remember: Your decision doesn't have to be final, but it should look potentially successful. FOLLOW UP ON THE
SOLUTION You can't be sure the solution will work until you try it out. After you've tested it for a while, it's a good idea to set aside some time to talk over how things are going. You may find that you need to make some time to talk over how things are going. You may find that you need to make some time to talk over how things are going. You may find that you need to make some time to talk over how things are going. You may find that you need to make some changes or even rethink the whole problem. The idea is to keep on top of the problem, to keep using creativity to solve it. Win-win.
solutions aren't always possible. There will be times when even the best-intentioned people simply won't be able to find a way of meeting all their needs. In cases like this, the process of negotiation has to include some compromising. But even then the preceding steps haven't been wasted. The genuine desire to learn what the other person wants and
to try to satisfy those desires will build a climate of goodwill that can help you find the best solution to the preceding method of handling conflicts is "This is a helpful thing sometimes, but it's so rational! Sometimes I'm We struggled
together, knowing. We prattled, pretended, fought bitterly, laughed, wept over sad books or old movies, nagged, supported, gave, took, demanded, forgave, resented— hating the ugliness in each other, yet cherishing that which we were. . . . Will I ever find someone to battle with as we battled, love as we loved, share with as we shared, challenge as
we challenged, forgive as we forgave? You used to say that I saved up all of my feelings so that I could spew forth when I got home. The anger I experienced in school I could not vent there. How many times have I heard you chuckle as you remembered the day I would come home from school and share with you all of the feelings I had kept in. "If
anyone had been listening they would have thought you were punishing me, striking out at me. I always survived and you always knew that I would still be with you when you were through." There was an honesty about our relationship that may never exist again. Vian Catrell 226-257 Ch07_Adler 254 2/28/05 PART TWO 9:49 AM Page 254
INTERPERSONAL COMMUNICATION CULTURAL IDIOM uptight: anxious get it off my chest: talk about something or anything . . . I just want to yell and get it off my chest!" When you feel like this, it's almost
impossible to be rational. At times like these, probably the most therapeutic thing to do is to get your feelings off your chest in what Bach calls a "Vesuvius"—an uncontrolled, spontaneous explosion. A Vesuvius can be a terrific way of blowing off steam, and after you do so, it's often much easier to figure out a rational solution to your problem. So we
encourage you to have a Vesuvius with the following qualifications: Be sure your partner understands what you're doing and realizes that whatever you say doesn't call for a response. He or she should let you rant and rave for as long as you want without getting defensive or "tying in." Then, when your eruption subsides, you can take steps to work
through whatever still troubles you. SUMMARY This chapter explored several factors that help make interpersonal relationship as it is expressed in the messages being sent and received. We examined factors that contribute to positive and
negative climates, learning that the underlying factor is the degree to which a person feels valued by others. We examined types of confirming and disconfirming and disconfirming messages, and then looked in detail at Gibb's categories of defensiveness-arousing and supportive behaviors. The second half of the chapter dealt with interpersonal conflict. We saw that
conflict is a fact of life in every relationship and that the way conflicts are handled plays a major role in the quality of a relationship. There are five ways people can behave when faced with a conflict:nonassertive, directly aggressive, passive aggressive, and assertive. Each of these approaches can be appropriate at times, but the chapter
focused on assertive communication skills because of their value and novelty for most communicators. We saw that conflicts end culture. There are four outcomes are often possible, if the parties possess the proper attitudes and skills. There are four outcomes to conflicts end culture.
final section of the chapter outlined the steps in win-win problem solving. KEY TERMS assertion 239 certainty 234 communication 238 disconfirming response
229 empathy 234 equality 234 escalatory conflict spiral 231 evaluative communication 232 Gibb categories 232 "I" language 232 indirect communication 238 provisionalism 234 spiral 231 spontaneity 233 strategy 233 superiority 234 win-
lose conflicts 247 win-win problem solving 249 "you" language 232 226-257 Ch07 Adler 2/28/05 9:49 AM Page 255 CHAPTER 7 IMPROVING INTERPERSONAL RELATIONSHIPS 25 ACTIVITIES 2. A friend hasn't repaid the twenty dollars she borrowed two weeks ago. 1. Your Confirming and Disconfirming Messages You can gain an understanding
of how confirming and disconfirming messages create communication spirals by trying the following exercise. 3. Your boss made what sounded like a sarcastic remark about the way you put school before work. 1. Identify the communication climate of an important personal relationship. Using weather metaphors (sunny, gloomy, calm) may help. 2.
Describe several confirming or disconfirming or disconfirming messages that have helped create and maintain the climate. Be sure to identified have created either escalatory conflict spirals. Describe how these spirals reach limits and what events cause them to stabilize
or reverse. 4. Describe what you can do to either maintain the existing climate (if positive) or change it (if negative). Again, list both verbal and nonverbal behaviors. 2. Constructing Supportive behavior. You will find that you can
communicate in a constructive way—even in conflict situations. 1. Begin by recalling at least two situations in which you replace the defense-
arousing behaviors with the supportive alternatives outlined by Gibb. 4. If it seems appropriate, you may choose to approach the other people in each of the situations you have described here and attempt to replay the exchanges. 3.
Constructing Assertive Messages Develop your skill at expressing assertive messages by composing responses for each of the following situations: 1. A neighbor's barking dog is keeping you awake at night. 4. An out-of-town friend phones at the last minute to cancel the weekend you planned to spend together. Now develop two assertive messages
you could send to a real person in your life. Discuss how you could express these messages in a way that is appropriate for the situation and that fits your personal style. 4. Problem Solving in Your Life 1. Recall as many conflicts as possible that you have had in one relationship. Identify which approach best characterizes each one: win-lose, lose-lose
compromise, or win-win. 2. For each conflict, describe the consequences (for both you and the other person) of this approach. 3. Based on your analysis, decide for yourself how successful you and the other person) of this approach that would result in more satisfying outcomes. Discuss what steps you and
your partner could take to make these changes. 2001. A thorough survey of the nature of interpersonal conflict and how it can be resolved. This is an ideal second step for readers who want to explore the subject in further detail. Knapp, Mark L., and John A. Daly. Handbook of Interpersonal Communication, 3rd ed. Thousand Oaks, CA: Sage, 2002. Leading scholars contribute chapters to
fundamental issues that involve better relationships including conflict, the role of emotions, culture, personality, and interpersonal influence. Kohn, Alfie. No Contest: The Case against Competition is inherently destructive, both in society at large and in
personal relationships. He goes on to demonstrate how cooperation can make people happier, more productive, and secure. Stone, Douglas, Bruce Patton, and Sheila Heen. Difficult Conversations: How to Discuss What Matters Most. New York: Penguin, 2000. This outstanding book was developed by members of the famous Harvard Negotiation
Project. It offers a comprehensive, readable, and (most importantly) effective approach to understanding the potential dangers of unproductive conf licts and how to avoid them. Examples are drawn from a variety of contexts, including work, family, and friendships. Tannen, Deborah. The Argument Culture. New York: Random House, 1998
Sociolinguist Tannen argues (note the combative metaphor) that our culture is suffused with an orientation toward combat that often pushes personal relationships away from cooperation and toward combat that often pushes personal relationships away from cooperation and toward combat that often pushes personal relationships away from cooperation and toward combat that often pushes personal relationships away from cooperation and toward combat that often pushes personal relationships away from cooperation and toward combat that often pushes personal relationships away from cooperation and toward combat that often pushes personal relationships away from cooperation and toward combat that often pushes personal relationships away from cooperation and toward combat that often pushes personal relationships away from cooperation and toward combat that often pushes personal relationships away from cooperation and toward combat that often pushes personal relationships away from cooperation and toward combat that often pushes personal relationships away from cooperation and toward combat that often pushes personal relationships away from cooperation and toward combat that often pushes personal relationships away from cooperation and toward combat that often pushes personal relationships away from cooperation and toward combat that of the pushes personal relationships away from the pushes personal relationships away fro
collaborative approaches toward managing differences. Feature Films For descriptions of each film below and descriptions of other movies that illustrate interpersonal relationships, see the CD-ROM that came with this book, and the Understanding Human Communication Web site at www.oup.com/us/uhc. Confirming and Disconfirming Behavior
Antwone Fisher (2002). Rated PG-13. A shipboard fight lands sailor Antwone Fisher (Derek Luke) in the office of base psychiatrist Jerome Davenport (Denzel Washington). After several sessions of stubborn silence, Antwone reveals that he was abandoned at birth by his imprisoned mother. He also never knew his father, who was murdered two months
before he was born. Raised by a cruel foster family, Antwone feels rootless and angry at the world. Davenport becomes a father figure to Antwone, assuring him of his value. The film, based on a true story, is a powerful example of how being ignored is the ultimate form of disconfirmation. The ending offers hope for turning around a tough life through
the confirmation and love of people who care. Stolen Summer (2002). Rated PG. Second-grader Pete O'Malley (Adi Stein) is worried about getting into heaven. His parochial school upbringing (and some advice from his brother) convinces him that he needs to help Jews believe in Jesus to save their souls, which in turn will ensure his own salvation. As
a result, he sets up a lemonade stand in front of a local synagogue with the goal of spreading the gospel. It's easy to see how Rabbi Jacobson (Keven Pollak) could become defensive at such proselytizing. Instead, he treats Pete and his mission with dignity and respect, and the two of them engage in a series of open-minded dialogues. The supportive
communication climate they create together allows them to exchange differing ideas without feeling threatened. In contrast, Pete's father, Joe O'Malley (Aidan Quinn), gets quite defensive when he imagines that Rabbi Jacobson is condescending to him. By movie's end, Joe and the rest of the characters learn some important lessons about breaking
down religious barriers and communicating supporrtively in the midst of differences. 226-257_Ch07_Adler 2/28/05 9:49 AM Page 257 CHAPTER 7 IMPROVING INTERPERSONAL RELATIONSHIPS 257 Dysfunctional Conflict Culture and Carolyn
Burnham (Kevin Spacey and Annette Bening) look like the perfect couple: attractive, with good jobs and an immaculate suburban home. But we soon learn that life isn't as good as it seems. The Burnhams' relationship with their daughter Jane (Thora Birch) is superficial. Carolyn is in denial about Lester's crisis, and she ignores his pleas to recapture
their lost love. As the film relentlessly moves toward a stunning conclusion, we are presented with a portrait of American family members who alternate between avoidance and aggression without demonstrating any apparent skill at managing the serious conflicts that face them. The Joy Luck Club is not one story but many, told in film through
flashbacks, narrations, and gripping portrayals. The mothers all flee difficult situations in China to start new lives in the United States, where they raise their daughters with a mixture of Chinese and American styles. Many of the movie's conflicts arise out of differing cultural values
The mothers were raised in the high-context, collectivist environment of China, where open conflict is discouraged and individual needs (particularly of women) were submerged for the larger good. To achieve their goals, the mothers use a variety of indirect and passive-aggressive methods. Their daughters, raised in the United States, adopt a more
lowcontext, direct form of communication. They are also more assertive and aggressive in their conflict styles, particularly when dealing with their mothers. Several of the outcomes are positive. The women in The Joy Luck Club
learn to both embrace and reject aspects of their cultural heritage as they attempt to manage their conflicts effectively. The War of the Roses (Michael Douglas and Kathleen Turner) are a couple whose
 "perfect marriage" falls apart when they encounter their respective midlife crises. Their decision to divorce is not nearly as depressing as their escalating hostility: Oliver and Barbara would rather die than sacrifice either their egos or their possessions. The Roses' battles soon escalate to the point of absurdity, but anyone who has seen the self-
defeating lengths to which some people will go in a dysfunctional conflict will find the film's theme sadly familiar. A civil divorce is hardly the goal to which any couple aspires, but after viewing the mutual destruction that arises from situations like the Roses', couples who can handle their breakups decently seem as deserving of admiration as
sympathy. PART THREE 258-287 Ch08 Adler 3/1/05 7:59 AM Page 258 CASE STUDY For the last three years you have been a volunteer at the local food bank, which distributes meals to less-fortunate neighbors in your community. Until now, the food bank has managed to meet the community's needs with donations from local businesses, but an
influx of poor and hungry residents makes it necessary to raise at least $20,000 to balance the coming year's budget. Impressed with your dedication and aware of the skills you've develop 3-5 realistic options for raising the necessary funds.
This is a big responsibility—more than you've ever had before. You try to pass along the job of chairing the committee, but the director expresses confidence in you and implores you to accept this important job. "Remember," she says, "several volunteers have already signed up for the committee, so you won't have to go out and recruit anybody. And
you don't have to actually raise the FOOD BANK TASK FORCE money. What we need from your committee is a list of options that the board of directors can choose to raise the $20,000. Just be sure that the approaches you present will support them." With a nervous lump in your throat, you agree to chair the
committee. Your first step is to review the list of people who have signed up to work with you. Grace Smith is a longtime volunteer. She is independently wealthy, a longtime supporter of the food bank, has plenty of free time, and an endless amount of energy. At first you thought she should chair the group, but the director diplomatically reminded you
that Grace is both a chatterbox and somewhat disorganized. Over the years you have thought that Grace is at least as interested in socializing as helping needy community members. Todd McManus is a selfmade man—a local restaurant owner who built his business from scratch; he has good ties to the business community. He is smart and dedicated
but he is very opin- ionated and has little patience with people he calls "time wasters." His passion is helping disadvantaged people become self-supporting. Todd is single and has a reputation as a Romeo who is studying at the local
university. She is a practicing Buddhist with a strong social conscience. You know she is extremely smart, but she is very quiet and avoids confrontation at almost any cost. Carlos Soares is a well-known musician who immigrated to this country from Portugal as a young man. He is passionate about the arts, and loves to perform. You suspect he will try
to steer the group toward some sort of concert. Your committee has four weeks to develop a set of recommendations for the food bank's board of directors. The director has told you that the committee members are ready to get started as soon as they receive direction from you. 258-287_Ch08_Adler 3/1/05 7:59 AM Page 259 CHAPTER 8 CHAPTER 9
1. What can you speculate are the individual goals of group members? Which of these goals do you expect members will share, and which might operate as hidden agendas? How might those individual goals don't interfere with the group's
goal? 1. How can you use the structured problem-solving approach outlined on pages 297-300 to develop an effective fundraising plan? 2. What procedural and task norms will help this group's task, which of the functional roles described on pages 273-275
do you think are most important to the success of your group? What role-related problems might occur if the roles you listed remain unfilled? 4. How might the cultural background of members affect the group to
experience as it develops its options? How can awareness of these steps make working together less troublesome and more rewarding? 3. What types of power (described on pages 308-311) can you expect group members to have and use? How could those types of power (described on pages 308-311) can you expect group members to have and use? How could those types of power (described on pages 308-311) can you expect group members to have and use? How could those types of power (described on pages 308-311) can you expect group members to have and use? How could those types of power (described on pages 308-311) can you expect group members to have and use? How could those types of power (described on pages 308-311) can you expect group members to have and use? How could those types of power (described on pages 308-311) can you expect group members to have and use? How could those types of power (described on pages 308-311) can you expect group members to have and use? How could those types of power (described on pages 308-311) can you expect group members to have and use? advice on pages 305-307 to build cohesiveness as you work on the list of options? 5. Choose either the styles or situational approach to leadership on pages 311-315 and describe how you would use your chosen style to be an effective leader. COMMUNICATION IN GROUPS As you read the chapters in this unit, consider the following: 258-
287_Ch08_Adler 3/1/05 7:59 AM Page 260 AFTER STUDYING THE MATERIAL IN THIS CHAPTER . . . You should understand: 1. The characteristics that distinguish groups from other collections of people. 2. The types of goals that operate in groups. 3. The various types of groups. 4. The characteristics of groups described in this chapter. 5. The
advantages and disadvantages of the decision-making methods introduced in this chapter. 6. The cultural influences that shape communication in groups you presently belong to and those you are likely to join in the future. 2. List the personal and group goals in groups you observe or belong to. 3. Identify
the norms, roles, and interaction patterns in groups you observe or belong to. 4. Choose the most effective decisionmaking methods for a group task. 258-287 Ch08 Adler 3/1/05 7:59 AM Page 261 CHAPTER HIGHLIGHTS Group communication possesses several important characteristics.
has its own operating style. A true group's interaction, interdependence, size, and length of time distinguish it from a less well-defined collection of individuals.
learning, personal growth, and problem solving. A group's rules, norms, roles, patterns of interaction, and methods of making decisions can shape the way members interact as well as their productivity and satisfaction.
287_Ch08_Adler 262_3/1/05_PART THREE_7:59 AM Page 262_COMMUNICATION IN GROUPS Most of the decisions that affect our lives are not made by individuals, but by small groups of people in executive boardrooms, faculty meetings, town councils, quality circles, dormitory rooms, kitchens, locker rooms, and a host of other meeting places. In a
democracy, the small group is the most basic way to get work done. Arthur Jensen How important are groups? You can answer this question for yourself by trying a simple experiment. Start by thinking of all the groups you belong to now and have belonged to in the past: the family you grew up with, the classes you have attended, the companies you
have learned, the benefits you have gained—even your very identity have all come from group membership. On the job, groups are the setting in which most work effectively as
downright miserable. Sometimes it is easy to see why a group succeeds or fails, but in other cases matters aren't so clear. It will go on to examine the reasons why people qualifies. It will go on to examine the reasons why people qualifies.
form groups and then look at several types of groups. Finally, it will conclude by looking at some communication. Which of the following would you identify as groups?
word in a special way that excludes each of the preceding examples. What are we talking about when we use the word group? For our purposes a group consists of a small collection of people who interact with each other, usually face to face, over time in order to reach goals. A closer examination of this definition will show why none of the collection
of people described in the preceding quiz qualifies as a group. Interaction CULTURAL IDIOM gawking at: staring at Without interaction, a collection of people isn't a group. Consider, for example, the onlookers at a fire. Though they all occupy the same area at a given time, they have virtually nothing to do with each other. Of course, if they should be
without communicating with one another. For example, students who passively listen to a lecture don't technically constitute a group until they begin to exchange messages with each other and their instructor. (This explains why some students feel isolated even though they spend so much time on a crowded campus. Despite being surrounded by
others, they really don't belong to any groups.) As you read in Chapters 3 and 5, there are two types of interaction that go on in any communication setting. The most obvious type is verbal, in which group members exchange words either orally or in writing. But people needn't talk to each other in order to communicate as a group: Nonverbal channels words either orally or in writing.
can do the job, too. We can see how by thinking again about a hypothetical classroom. Imagine that the course is in its tenth week and that the instructor has been lecturing nonstop for the entire time. During the first few meetings there was very little interaction of any kind: Students were too busy scribbling notes and wondering how they would
survive the course with grade-point averages and sanity intact. But as they became more used to the class, the students began to share their feelings with each other. Now there's a great amount of eye rolling and groaning as the same tired jokes for the second and another.
third time. Thus, even though there's no verbal exchange of sentiments, the class has become a group—interestingly, in this sense a group—interestingly in this sense a gr
to face-to-face teams in at least two ways. First, getting together is fast and easy. A virtual team can meet whenever necessary, even if the members are widely separated. This ease of interaction isn't just useful in the business world. For most groups of students working on class projects, finding a convenient time to meet can be a major
headache. Virtual groups don't face the same challenges. A second advantage of virtual teams is the leveling of status differences. When people connect via computer networks, rank is much less prominent than when groups meet face to face. 6 Because fear of authority figures can squelch creative thinking, virtual teams are a good device for making
sure groups find the best solutions to problems. Interdependence In groups, members don't just interact: Their members are interdependent. The behavior of one person affects all the others in what can be called a "ripple effect." 8 Consider your own experience in family and work groups: When one member behaves poorly, his or her actions shape
the way the entire group functions. The ripple effect can be positive as well as negative: Beneficial actions by some members help everyone. THE NATURE OF GROUPS CULTURAL IDIOM eye rolling: nonverbally expressing discontent 263 258-287 Ch08 Adler 264 3/1/05 PART THREE 7:59 AM Page 264 COMMUNICATION IN GROUPS
UNDERSTANDING COMMUNICATION TECHNOLOGY COMMUNI
virtual team at no charge, providing a surprising array of services. You and your groupmates can 🔳 🔳 Send and receive email messages Upload and download files Create and use your own private chat for real-time conferencing
events and reminders on a group calendar Create a roster of group members, complete with personal profiles Sometimes there is no good substitute for face-to-face meetings. But you may be surprised how quick, easy, and effective it can be for a group to work online. Time A collection of people who interact for a short while doesn't qualify as a
group. As you'll soon read, groups who work together for any length of time begin to evolve, and the way individuals feel about each other begins to affect their behavior toward the group's task and toward each other
According to this criterion, onlookers at a fire might have trouble qualifying as a group even if they briefly cooperated with one another to help out in the emergency. The element of time clearly excludes temporary gatherings such as the passengers gathered around the airline ticket counter. Situations like this simply don't follow many of the
principles you'll be reading about in the next two chapters. Size Our definition of groups included the word small. Most experts in the field set the lower limit of group size at three members. This decision isn't arbitrary, because there are some significant differences between two- and three-person communication. For example, the only ways two
people can resolve a conflict are to change one another's minds, give in, or compromise; in a larger group, however, there's a possibility of members or to outvote them. There is less agreement about when a group stops being small.9 Though no expert would call a five
hundred-member army battalion a group in our sense of the word (it would be labeled an organization), most experts are reluctant to set an arbitrary upper limit. Probably the best description of smallness is the ability for each member to be able to know and react to every other member. It's sufficient to say that our focus in these pages will be on
collections of people ranging in size from three to between seven and twenty. 3/1/05 7:59 AM Page 265 CHAPTER 8 In task-oriented groups, bigger usually isn't better. Research suggests that the optimal size for a group is the smallest number of people capable of performing the task at hand effectively. 10 This definition makes it clear that there is no
magic number or formula for choosing the best group size. The optimal number will change according to the task, as well as contextual factors such as politics, legal requirements, and institutional norms. 11 But generally speaking, as a group becomes larger, it is harder to schedule meetings, the members have less access to important information
and they have fewer chances to participate—three ingredients in a recipe for dissatisfaction. Goals Group members and most prison inmates will testify. But whether or not people choose to join groups, they usually hope to achieve one or more goals. At first the goal-related nature of group
membership seems simple and obvious. In truth, however, there are several types of goals, which we will examine in the following pages. GOALS OF GROUPS AND THEIR MEMBERS We can talk about two types of goals when we examine groups. The first type involves individual goals—the motives of individual members—whereas the second involves are talk about two types of goals.
group goals—the outcome the group seeks to accomplish. Individual Goals The most obvious type of individual soin groups is to meet their personal needs. Task orientation—getting the job done—is the most obvious type of individual soin groups is to meet their personal needs.
Sometimes a member's task-related goals will have little to do with a group's stated purpose. Many merchants, for example, join service clubs such as Kiwanis, Rotary, or Lions primarily because doing so is good for business. The fact that these groups help achieve worthy goals such as helping the blind or disabled is fine, of course, but for many people
it is not the prime motive for belonging.12 What about groups with no specifically defined purpose? Consider, for instance, gatherings of regulars at the beach on sunny weekends or a group of friends whose members eat lunch together several times a week. Collections such as these meet the other criteria for being groups: They interact, meet over
time, THE NATURE OF GROUPS 265 Source: THE FAR SIDE © 1987 FARWORKS, INC. Used by permission. All Rights Reserved. 258-287_Ch08_Adler 258-287_Ch08_Adler 266 3/1/05 PART THREE 7:59 AM Page 266 COMMUNICATION IN GROUPS and have the right number of members. But what are the members' reasons for belonging? In our
examples here, the goals can't be sunbathing or eating because these activities could be carried out alone. The answer to our question introduces social orientation. In many cases people join together in order to seek a sense of belonging, to exercise influence over others, and to gain the liking of others. Notice that none of these factors necessarily has
much to do with the task: It's possible to get social needs met without getting the job done. Likewise, a group can be efficient—at least for a short while—without meeting the social needs of its members. We join many, if not most, groups in order to accomplish both task and social goals. School becomes a place both to learn important information and
to meet desirable friends. Our work becomes a means of putting food on the table and getting recognition for being competent. The value of making a distinction between task and social goals comes from recognizing that the latter are usually important but often not stated or even recognized by group members. Thus, asking yourself whether social
goals are being met can be one way of identifying and overcoming blocks to group effectiveness. Group Goals So far we have discussed the forces that motivate individual group members. In addition to these individual forces, there also exist group goals. For example, athletic teams exist to compete with each other, and academic classes strive to
transmit knowledge. Sometimes there is a close relationship between group and individual members a close relationship between group succeed. If you think about it for a moment, however, you'll see that the individual members have other goals as well: improving their physical ability,
having a good time, overcoming the personal challenges of competition, 258-287 Ch08 Adler 3/1/05 7:59 AM Page 267 CHAPTER 8 and often gaining the social benefits that come from being an athlete. The difference between individual and group goals is even more pronounced when the two are incompatible. Consider, for instance, the case of an
athletic team that has one player more interested in being a "star" (satisfying personal needs for recognition) than in helping the team win. Or recall classes you have known in which a lack of student enthusiasm made the personal goal of many students—getting by with the smallest possible amount of work—hardly consistent with the stated group
goal of conveying information. Sometimes the gap between individual and group goals is public, whereas at other times an individual's goal becomes a hidden agenda. In either case, this discrepancy can be dangerous for the well-being of the group and needs to be dealt with. We'll have more to say about this subject in Chapter 9. As long as the
members'individual goals match those of the group, no conflicts are likely to arise. But when there is a clash between what members seek for themselves and what the group's is especially great when there is less need for interdependence
John Krakauer captures this situation clearly in his account of a team of climbers seeking to reach the peak of Mount Everest: There were more than fifty people camped on the Col that night, huddled in shelters pitched side by side, yet an odd feeling of isolation hung in the air. We were a team in name only, I'd sadly come to realize. Although in a few
hours we would leave camp as a group, we would ascend as individuals, linked to one another by neither rope nor any deep sense of loyalty. Each client was in it for himself or herself, pretty much. And I was no different: I sincerely hoped Doug got to the top, for instance, yet I would do everything in my power to keep pushing on if he turned
around.13 TYPES OF GROUPS So far we have seen that groups fulfill a variety of goals. Another way of examining groups is to look at some of the functions they serve. Learning groups is to look at some of the functions they serve. Learning groups is to look at some of the functions they serve. Learning groups is to look at some of the functions they serve.
ones. Members of a scuba-diving class, friends who form a Bible study group, and members of a League of Women Voters chapter all belong to learning groups is to increase the knowledge or skill of each member. Problem-Solving Groups Problem-solving groups work to resolve a mutual
raising drive are focusing on external problems. THE NATURE OF GROUPS 267 258-287_Ch08_Adler 268 3/1/05 PART THREE 7:59 AM Page 268 COMMUNICATION IN GROUPS UNDERSTANDING COMMUNICATION TECHNOLOGY WAIFS ON THE WEB: ANOREXIC TEENS JOIN DANGEROUS ONLINE SUPPORT GROUPS For three days Abbey
18, subsisted mostly on water. When hunger pangs began to plague her, she simply gulped a little more liquid. Although the 56, 115-pound college freshman was achieving her goal—to lose weight as quickly as possible-her body was clearly suffering. On the third day, Abbey (who didn't want her full name used) lay awake in the middle of the night
Disorder Society's Web site at around midnight. "Has anyone ever experienced these effects, and will they go away?" The response came hours later. "Yeah, I get that sometimes when I've been fasting," wrote someone seemingly well-versed in hunger. "The best thing to do is eat an apple, drink a glass of water and go to sleep. Your body is a little
exhausted, that's all." Reassured, Abbey never sought medical attention, nor did she tell anyone else about her scare. "The apple comment made me feel like someone who is fasting, a speeding heart can be a sign of real danger
Severe fasting and dehydration can cause abnormal heart patterns and even cardiac arrest, a condition responsible for many of the anorexia-related deaths each year. Abbey's body was telling her it was in trouble, but her online cheerleaders were telling her it was in trouble, but her online cheerleaders were telling her it was in trouble, but her online cheerleaders were telling her she was doing fine—and that's who Abbey believed. It's the dynamic that has eating-disorder
experts worried about the recent popularity of secretive, girl-run "thinspirational" Web sites and e-groups. Catering to "Anas" (after America's estimated 8 million who suffer from anorexia and other eating disorders), the sites are havens where girls cybergather to hash out their problems or listen in on discussions about body obsessions and the best
ways to avoid prying family members. "What I do to hide it . . . is complain about my teeth being too sore [because of my braces]," writes Sally The Veggie Stick when asked how she disguises the disease from her mother. "Hi, I'm new to the list," chimes in one participant in the e-group Never Thin Enough. "I am almost 510 and I weigh 115. Of course
... my goal is to weigh around 88." From there, it's on to discussions of how well laxatives and over-the-counter weight-loss supplements work, sign-ups for group fasts, advice on how to curb hunger (one poster recommends looking at photos of dead, bloody animals) and tips such as eating cotton sprinkled with salt instead of food. In one posting a
girl details her exercise schedule for the day—aerobics at 9 A.M., Pilates at 10 A.M., and running in the evening—and urges others to work as hard. Many sites also post something called the Anorexic Creed: "... I believe in calorie counters as the inspired word of God and memorize them accordingly. I believe in bathroom scales as an indicator of my
daily successes and failures . . . " "With the pro-anorexia sites, you don't feel like people are going to be judging you," says Liz, a high school senior from Oak Park, Ill. "There are people who just want to lose weight, and there are people who just want to lose weight, and there are people who just want to lose weight, and there are people who just want to lose weight, and there are people who just want to lose weight, and there are people who just want to lose weight, and there are people who just want to lose weight, and there are people who just want to lose weight, and there are people who just want to lose weight, and there are people who just want to lose weight, and there are people who just want to lose weight, and there are people who just want to lose weight, and there are people who just want to lose weight, and there are people who just want to lose weight, and there are people who just want to lose weight, and there are people who just want to lose weight, and there are people who just want to lose weight, and there are people who just want to lose weight, and there are people who just want to lose weight, and there are people who just want to lose weight, and there are people who just want to lose weight, and there are people who just want to lose weight want to lose 
anorexia-recovery sites but left because she felt pressured to, well, recover. "[The sites] make me feel pretty helpless," admits Daniel le Grange, Ph.D., director of the University of Chicago's Eating Disorders Program, adding that their covert nature "just reinforces the secretive tendency of anorexics," leaving therapists and doctors at a loss to help
patients they can't even find, let alone talk to. Abbey in Texas knows that anorexia is taking over her life and that she's on the verge of a serious illness. Unfortunately, knowing that doesn't necessarily mean stopping the behavior. She still turns to the Anas for advice, but unlike others on the sites who chat like old friends, she makes no pretense
about the kinds of relationships she is forming there. "I've met some nice girls, but they're not my friends," Abbey says. "These people are helping me starve. I was talking to this one girl and I said something like, 'It's weird that we're basically helping each other starve.' She was like, 'Yeah, I know.' They call it fasting and they use all these PC terms
but it's really starving." Dawn Mackeen 258-287_Ch08 Adler 3/1/05 7:59 AM Page 269 CHAPTER 8 THE NATURE OF GROUPS 269 Problem-solving groups can take part in many activities: One type is gathering information, as when several students compile a report for a class assignment. At other times, a group makes policy—a club's deciding
whether or not to admit the public to its meetings being an example. Some groups make individual decisions; an interview committee who decides which candidate to hire is fulfilling this function. Social Groups we have already mentioned that some groups serve strictly to satisfy the social needs of their participants. Some social groups are organized
whereas others are informal. In either case, the inclusion, control, and affection that such groups provide are reason enough for belonging. Groups don't always fall neatly into just one category. For example: Besides becoming more
knowledgeable about communication, many of the students in your class are probably satisfying social needs by making new friends. Some are probably growing personally by applying the principles to their own lives. Groups of students—fellow employees or teammates, for instance—may even take the class together to focus on solving a collective
problem. Despite the multiplicity of goals, it's usually possible to characterize a group as primarily focused on learning groups, in which the subject matter is external to the members, growth groups focus on teaching the members more about themselves. Consciousness-raising
groups, marriage encounter workshops, counseling, and group therapy are all types of growth groups. These are unlike most other types of groups in that there is no real collective goal: The entire purpose of the group is to help the members identify and deal with their personal concerns. As the "Understanding Communication Technology" box on
page 268 shows, not all support groups operate in the best interests of their members. ETHICAL CHALLENGE MOTIVES FOR GROUP MEMBERSHIP Members often join a group for reasons unrelated to the group's stated purpose for existing. For example, some people belong to growth groups to achieve social needs, and others speak out in task
oriented groups to satisfy their egos more than to help solve the stated problem. Develop a set of ethical guidelines that describes when you believe it is and is not ethical to participate in groups have certain characteristics in common
members should behave. In a classroom, these rules include how absences will be treated, whether papers must be typed or may be handwritten, and so on. Alongside the official rules, an equally powerful set of standards also operates, often without ever being discussed. Sociologists call these unstated rules norms. Norms are shared
values, beliefs, behaviors, and procedures that govern a group's operation. For instance, you probably won't find a description of what jokes are and aren't acceptable? How much, and what types? What
about religious jokes? How much kidding of other members is proper? Matters such as these vary from one group to another, according to the norms of each one.14 TABLE 8-1 Typical Rules (Explicit) If If you don't do the chores, you don't get your allowance. If you're going to be more than a
half-hour late, phone home so the others don't worry about you. If the gas gauge reads "empty," fill up the tank before bringing the car home. Don't make plans for Sunday nights. That's time for the family to spend together. Daniel gets to watch Sesame Street from 5 to 6 P.M. Norms (Unstated)
problems. Don't talk about Sheila's divorce. It's okay to tease Lupe about being short, but don't make comments about What they do with their friends. At family gatherings, try to change the subject when Uncle Max brings up politics. On-the-
Job Meetings Rules (Explicit) 🔳 🔳 Regular meetings are held every Monday morning at 9 A.M. The job of keeping minutes rotates from person. Meetings to take phone calls except in emergencies. Norms (Unstated) 🔳 🔳 Use first names. It's okay to question the boss's ideas,
but if she doesn't concede after the first remark, don't continue to object. Tell jokes at the beginning of the meeting, but avoid sexual or ethnic topics. CHAPTER 8 THE NATURE OF GROUPS "RULES ARE THE ONLY THING WE'VE GOT" "What are we? Humans? Or animals? Or savages? What's grownups going to think? Going off—hunting pigs—letting fires out—and now!" A shadow fronted him tempestuously. "You shut up, you fat slug!" There was a moment's struggle and the glimmering conch
jigged up and down. Ralph leapt to his feet. "Jack! Jack! You haven't got the conch! Let him speak." Jack's face swam near him. "And you shut up! Who are you, anyway? Sitting there telling people what to do. You can't hunt, you can't make any
sense—" "Piggy's got the conch." "That's right—favor Piggy as you always do—" "Jack!" Jack!" "The rules!" shouted Ralph. "You're breaking the rules!" "Who cares?" Ralph summoned his wits. "Because the rules are the only thing we've got!" William Golding Lord of the Flies There are three categories of
                         rocedural, and task. Social norms govern the relationship of members to each other. How honest and direct will members be with one another? What emotions will and won't be expressed, and in what ways? Matters such as these are handled by the establishment of social norms, usually implicit ones. Procedural norms outlined to the contract will member and the contract will membe an expectation of the contract will member and the contract will member and the contract will member and the contract will membe an expectation of the contract will member and the contract will member and the contract will member and the contract will membe an expectation of the contract will be an expectat
how the group should operate. Will the group make decisions by accepting the vote of the majority, or will discussion be leaderless? Task norms focus on how the job itself should be handled. Will the group keep working on a problem until everyone agrees that
its solution is the best one possible, or will members settle for an adequate, if imperfect, solution? The answer to this question results in a task-related norms. Table 8-1 lists some typical rules and norms that operate in familiar
groups. It is important to realize that the actual rules and norms that govern a group don't always match the idealized ones that embody cultural standards. Consider the matter of punctuality, for example. A cultural norm in our society is that meetings should begin at the scheduled time, yet some groups soon generate the usually unstated agreement
that the real business won't commence until ten or so minutes later. On a more serious level, one cultural norm is that other people should be treated politely and with respect, but in some groups failure to listen, sarcasm, and even outright hostility make the principle of civility a sham. It is important to understand a group's norms. Following them is
one way to gain acceptance into the group, and sometimes recognizing norms that cause problems can be a way to help the group operate more effectively. For instance, in some groups a norm is to discourage new ideas by criticism, sarcasm, or indifference. Pointing this out to members might be a way to change the unwritten rules and thereby
improve the group's work. If norms are rarely stated, how is it possible to identify them? There are two sets of clues that can help you pin down norms. First, look for behaviors that occur of CULTURAL IDIOM pin down: identify specifically 271 258-287 Ch08 Adler 272 3/1/05 PART THREE 7:59 AM Page 272 COMMUNICATION IN GROUPS ten.15 For
instance, notice what time meetings begin. Observe the amount of work members are willing to contribute to the group. See what kinds of humor are and aren't used. Habitual behaviors like these suggest the unspoken rules that the group lives by. Second, look for clues that members are being punished for violating norms. Most punishments are
subtle, of course: pained expressions from other members when a speaker talks too much, no laughter following an inappropriate joke, and so on. Roles Whereas norms define acceptable group standards, roles define patterns of behavior expected of members. Just like norms, some roles are officially recognized. These formal roles are assigned by an
organization or group partly to establish order. Formal roles usually come with a label, such as "assistant coach," "treasurer," or "customer service representative." Unlike these formal classifications, informal roles (sometimes called "functional roles in the most common informal roles in the most common info
task-oriented groups. As the list shows, informal roles describe the functions members can fill rather than their formal positions. You can probably think of many groups in which some members were clearly leaders and others followers. Informal roles are
not formally assigned to members. In fact, they are rarely even recognized as existing. Many of the roles may be filled by more than one member, and some of the informal roles must be filled by someone. Notice that the informal roles listed in
Table 8-2 fall into two categories: task and maintenance. Task roles help the group accomplish its goals, and social roles are constructive. Table 8-3 lists several dysfunctional roles that prevent a group from working effectively. Research suggests
that the presence of positive social roles and the absence of dysfunctional ones are key ingredients in the effectiveness of groups.17 What is the optimal balance between task and social functions? According to Robert Bales, one of the earliest and most influential researchers in the area, the ideal ratio is 21, with task-related behavior dominating.18
This ratio allows the group to get its work done while at the same time taking care of the personal needs and concerns of the members aren't aware of the existence of informal roles. You will rarely find members saying things like "You ask most of the questions, I'll give opinions, and she
can be the summarizer." Yet it's fairly obvious that over time certain members do begin to fulfill specific roles. How does this process occur? There are two answers to this question. One factor in role differentiation is certainly the personal characteristics of each member. But by themselves, personal 258-287 Ch08 Adler 3/1/05 7:59 AM Page 273

Behaviors Examples 10. Energizer Prods the group to action. "Come on, guys.We've been wasting time. Let's get down to business." 11. Procedure Developer Handles routine tasks such as seating arrangements, obtaining equipment, and handing out pertinent papers. "I'll volunteer to see that the forms are printed and distributed." "I'd be happy to
check on which of those dates are free." 12. Secretary Keeps notes on the group's progress. "Just for the record, I'll put these decisions in the memo and get copies to everyone in the group's accomplishments according to some set of standards; checks to see that consensus has been reached.
"Look, we said we only had two weeks, and this proposal will take at least three. Does that mean that it's out of the running, or do we need to change our original guidelines?" 1. Supporter/Encourager Praises, agrees with, and accepts the contributions of others; offers warmth, solidarity, and recognition. "I really like that idea, John." "Priscilla's
suggestion sounds good to me. Could we discuss it further?" 2. Harmonizer Reconciles disagreements; mediates differences; reduces tensions by giving group members a chance to explore their differences; reduces tensions by giving group members a chance to explore their differences. "I don't think you two are as far apart as you think. Henry, are you saying? Benson, you seem to be saying. Is that what you mean?" 3. Tension
Reliever Jokes or in some other way reduces the group members. "Let's take a break . . . maybe have a drink." "You're a tough cookie, Bob. I'm glad you're on our side!" 4. Conciliator Offers new options when his or her own ideas are involved in a conflict; willing to admit errors so as to maintain group cohesion.
"Looks like our solution is halfway between you and me, John. Can we look at the middle ground?" 5. Gatekeeper Keeps communication channels open; encourages and facilitates interaction from those members who are usually silent. "Susan, you haven't said anything about this yet. I know you've been studying the problem. What do you think about
?" 6. Feeling Expresser Makes explicit the feelings, moods, and relationships in the group; shares own feelings with others. "I'm really glad we cleared things up today." The feelings with the movement of the group passively, accepting the ideas of others, sometimes
serving as an audience. "I agree.Yes, I see what you mean. If that's what the group wants to do, I'll go along." Social/Maintenance Roles 258-287 Ch08 Adler 3/1/05 7:59 AM Page 275 CHAPTER 8 TABLE 8-3 THE NATURE OF GROUPS 275 Dysfunctional Roles of Group Members Dysfunctional Roles Typical Behaviors Examples 1. Blocker Interferes
with progress by rejecting ideas or taking a negative stand on any and all issues; refuses to cooperate. "Wait a minute! That's not right! That idea is absurd." "You can talk all day, but my mind is made up." 2. Aggressor Struggles for status by deflating the status of others; boasts, criticizes. "Wow, that's really swell! You turkeys have botched things
again." "Your constant bickering is responsible for this mess. Let me tell you how you ought to do it." 3. Deserter Withdraws in some way; remains indifferent, aloof, sometimes formal; daydreams; wanders from the subject, engages in irrelevant side conversations. "I suppose that's right . . . I really don't care." 4. Dominator Interrupts and embarks on
long monologues; is authoritative; tries to monopolize the group's time. "Bill, you're just off base. What we should do is this. First . . ." 5. Recognition Seeker Attempts to gain attention in an exaggerated manner; usually boasts about past accomplishments; relates irrelevant personal experiences, usually in an attempt to gain sympathy. "That reminds
me of a guy I used to know . . . "Let me tell you how I handled old Marris . . . "6. Joker Displays a lack of involvement in the group through inappropriate humor, horseplay, or cynicism. "Why try to convince these guys? Let's just get the mob to snuff them out." "Hey, Carla, wanna be my roommate at the sales conference?" 7. Cynic Discounts chances
for group's success. "Sure, we could try that idea, but it probably won't solve the problem. Nothing we've tried so far has worked." Source: "Functional Roles of Group Members" and Participation in Decision-Making Groups by Gerald Wilson and Michael
Hanna, pp. 144-146. © 1986. Reprinted by permission of McGraw-Hill Companies, Inc. skills and traits aren't enough to earn a member acceptance as possessor of a role, especially in newly formed groups where no formal leader exists. The process of role emergence has been studied extensively by communication scholar Ernest Bormann, who has
identified a predictable series of stages groups go through in role designation. 19 (Remember that this process is almost never discussed and is rarely performed consciously.) At first, members will make bids for certain roles. A particularly analytical communicator might audition for the role of critic by pointing out flaws in a proposal, 258-
287 Ch08 Adler 276 3/1/05 PART THREE 7:59 AM Page 276 COMMUNICATION IN GROUPS CULTURAL IDIOM occupying their pet position: playing their favorite just the ticket: the right thing for example. In order for this role to "take," the group members must endorse the bid by acknowledging and accepting it verbally and nonverbally—giving
the would-be critic their attention and making positive comments about the observations. If the group does not support the first few initial bids, a sensitive member is likely to try another role. ROLE-RELATED PROBLEMS AND SOLUTIONS Groups can suffer from at least three role-related problems. The first occurs when one or more important
informal roles—either task or social—go unfilled. For instance, there may be no information giver to provide vital knowledge or no harmonizer to smooth things over when members disagree. There are other cases when the problem isn't an absence of candidates to fill certain roles, but rather an overabundance of them. This situation can lead to
unstated competition between members, which gets in the way of group effectiveness. You have probably seen group's job done. Even when
there's no competition over roles, a group's effectiveness can be threatened when one or more members suffer from "role fixation"—acting out a specific role whether or not the situation requires it.20 As you learned in Chapter 1, a key ingredient of communication competence is flexibility—the ability to choose the right behavior for a given situation
Members who always take the same role—even a constructive one—lack competence, and they hinder the group. As in other areas of life, too much of a good thing can be a problem. You can overcome the potential role-related problems,
use the list in Table 8-2 as a kind of checklist to diagnose what roles might be unfilled. Make sure unfilled, Make sure unfilled roles are filled. After you have identified unfilled roles, you may be able to help the group's work.
offer to play secretary and take notes. Even if you are not suited by skill or temperament to a job, you can often encourage others to fill it. Avoid role fixation. Don't fall into familiar roles if they aren't needed. In most cases
your natural inclination to be a supporter might be just the ticket to help a group succeed; but if you find yourself in a group where the members don't need or want this sort of support, your encouragement might become a nuisance. Avoid dysfunctional roles. Some of these roles can be personally gratifying, especially when you are frustrated with a
group; but they do nothing to help the group succeed, and they can damage your reputation as a team player. Nobody needs a blocker, a joker, or any other of the dysfunctional roles listed in Table 8-3. Resist the temptation to indulge yourself by taking on any of them. 258-287 Ch08 Adler 3/1/05 7:59 AM Page 277 CHAPTER 8 CRITICAL THINKING
PROBE FUNCTIONAL AND DYSFUNCTIONAL ROLES THE NATURE OF GROUPS 277 Identify the functional and dysfunctional group (e.g., an athletic team or class group), a group who can be observed (e.g., city council, faculty senate), or even a fictional group (such as those
described in the books and films listed at the end of this chapter). How do the roles in the group you are analyzing contribute to the group more effective? Patterns of Interaction In Chapter 1 we said that communication involves the exchange of information
```

between and among people. It almost goes without saying that this exchange needs to be complete and efficient for the communicators to reach their goals. In interpersonal and public speaking settings, information exchange is relatively uncomplicated, taking basically two routes: either between the two individuals in an interpersonal dyad or between

```
the speaker and the audience in a public speaking situation. (Actually, this is a slight oversimplification. In public speaking situations, members of an audience also exchange messages with one another with their laughter, restless movements, and so on. It's still fair to say, however, that the exchange of information is basically two-way.) In groups and the speaking situations are speaking situations.
however, things aren't so simple. The mathematical formula that identifies the number of members in a group. Thus, in even a relatively small five-member group, there are ten possible multiperson conversations and seventy-five possible multiperson conversations and seventy-five possible multiperson conversations.
interactions. Besides the sheer quantity of information exchanged, the more complex structure of groups affects the flow of inA formation in other ways, too. A look at Figure 8-1 (usually called a sociogram) will suggest the number and complexity of interactions that B can occur in a group. Arrows connecting members indicate remarks shared
between them. Two-headed arrows E represent two-way conversations, whereas one-headed arrows earnest that did not arouse a response. Arrows directed to the center of the circle indicate remarks made to the group as a whole. A network analysis of this sort can reveal both the amount of participation by each member and the recipients
of every member's remarks. As such, it provides a graphic look at who seems C to be making the most significant contributions (at least in terms of their quantity), as well as who is not contributions (at least in terms of their quantity), as well as who is not contributions. In the group pictured in Figure 8-1, person E appears to be connected to the group only through a relationship with person A; E never addressed any
other members, Figure 8-1 Patterns of Interaction in a Five-Person Group 258-287 Ch08 Adler 278 3/1/05 PART THREE 7:59 AM Page 278 COMMUNICATION IN GROUPS nor did they address E. Also notice that person A is the most active and bestconnected member. A addressed remarks to the group as a whole and to every other member and was
the object of remarks from three individuals as well. Sociograms don't tell the whole story, because they do not indicate the quality of the messages being exchanged. Nonetheless, they are a useful tool in diagnosing group communication. Physical arrangement influences communication in groups. It's obviously easier to interact with someone you
can see well. Lack of visibility isn't a serious problem in dyadic settings, but it can be troublesome in groups. For example, group members seated in a circle are more likely to talk with persons across from them than with twelve-
person juries showed that those sitting at either end of rectangular tables participated more in discussions and were viewed by other members as having more influence on the decision-making process.22 Rectangular tables showed that
as distance between two persons increased, other members always stayed together and shared every piece of information with one another, their interaction would resemble the pattern in Figure 8-2—what communication theorists have
called an all-channel network. But not all groups meet face to face. The crew who waits tables and prepares the food at a restaurant and the group of nurses, aids, and technicians who staff an eight- or ten-hour hospital shift rarely sit down together to discuss their work. When group members aren't in immediate contact with one another, information
can flow through a variety of other networks (see Figure 8-2). Some follow a chain network, moving sequentially from one member to another. Chains are an efficient way to deliver simple verbal messages or to circulate written information when members can't manage to attend a meeting at one time. You might use this approach to route an
important message to members of a team at work, asking each All-Channel Network Wheel Network Wheel Network Figure 8-2 Small Group Communication Networks 258-287 Ch08 Adler 3/1/05 7:59 AM Page 279 CHAPTER 8 person to initial a memo and pass it along to the next person on a routing slip. Chain networks are not very reliable for
lengthy or complex verbal messages, because the content of the message can change as it passes from one person to another. Another communication pattern is the wheel network, in which one person acts as a clearinghouse, receiving and relaying messages to all other members. Like chains, wheel networks are sometimes a practical choice
especially if one member is available to communicate with others all or most of the time. In a class group, you might use a wheel network if one of your members is usually near a telephone. This person can become the informational hub who keeps track of messages and people. Groups sometimes use wheel networks when relationships are strained
between two or more members. In cases like this, the central member can serve as a mediator or facilitator who manages messages as they flow between others. The success of a wheel network depends heavily on the skill of the gatekeeper—the person through whom information flows. If he or she is a skilled communicator, these mediated messages as they flow between others.
may help the group function effectively. But if the gatekeeper consciously or unconsciously distorts messages to suit personal goals or plays members off against one another, the group is likely to suffer. THE NATURE OF GROUPS 279 CULTURAL IDIOM hashed out: discussed thoroughly Decision-Making Methods Another way to classify groups is
according to the approach they use to make decisions. There are several approaches a group can use to make decisions. We'll look at each of them now, examining their advantages and disadvantages are obvious: Full participation can
increase the quality of the decision as well as the commitment of the members to support it. Consensus is especially important in decisions on critical or complex matters; in such cases, methods using less input can diminish the quality of or enthusiasm for a decision. Despite its advantages, consensus also has its disadvantages. It takes a great deal of
time, which makes it unsuitable for emergencies. In addition, it is often very frustrating: Emotions can run high on important matters, and patience in the face of such pressures is difficult. Because of the need to deal with these emotional pressures is difficult. Because of the need to deal with these emotional pressures is difficult.
things in life, consensus has high rewards, which come at a proportionately high cost. MAJORITY CONTROL A naive belief of many people (perhaps coming from overzealous high rewards, which come at a proportionately high cost. isn't necessary, but in more important matters it is risky. Remember that even if a 51 percent majority of the members favors a plan, 49 percent majority rule often are of a
quality inferior to that of decisions hashed out by a group until the members reach consensus.25 Under majority rule, members who recognize During a [second-grade] science project . . . one of the 7-year-olds wondered out loud whether the baby squirrel they had in class was a boy or a girl. After pondering the issue for a few minutes, one budding
scientist offered the suggestion that they have a class discussion about it and then take a vote. Cal Downs, Wil Linkugel, and David M. Berg 258-287 Ch08 Adler 280 3/1/05 PART THREE 7:59 AM Page 280 COMMUNICATION IN GROUPS Source: DILBERT © by Scott Adams; reprinted by permission of United Feature Syndicate, Inc. that they are
outvoted often participate less, and the deliberations usually end after a majority opinion has formed—even though minority viewpoints might be worthwhile. EXPERT OPINION Sometimes one group member will be defined as an expert and, as such, will be given the power to make decisions. This method can work well when that person's judgment is
truly superior. For example, if a group of friends is backpacking in the wilderness, and one becomes injured, it would probably be foolish to argue with the advice of a doctor in the group. In most cases, however, matters aren't so simple. Who is the expert? There is often disagreement on this question. Sometimes a member might think he or she is the
best qualified to make a decision, but others will disagree. In a case like this, the group probably won't support that person's advice, even if it is sound. MINORITY CONTROL Sometimes a few members of a group will decide matters. This approach works well with noncritical questions that would waste the whole group's time. In the form of a
committee, a minority of members also can study an issue in greater detail than can the entire group. When an issue is so important that it needs the support of everyone, it's best at least to have the approach most often used by autocratic leaders (see
Chapter 8). Though it sounds dictatorial, there are times when such an approach has its advantages. This method is quick: There are cases when there simply isn't time for a group to decide what to do. The approach is also perfectly acceptable with routine matters that don't require discussion in order to gain approval. When overused, however, this
approach causes problems. As Chapter 8 will show, much of the time group decisions are of higher quality and gain more support from members than those made by an individual. Thus, 258-287 Ch08 Adler 3/1/05 7:59 AM Page 281 CHAPTER 8 failure to consult with members can lead to a decrease of effectiveness even when the leader's decision is
reasonable one. When the person in authority consults members before making a decision, the results gain some of the quality and commitment that come from group interaction while also enjoying the speed that comes from avoiding extensive discussion. This approach has its disadvantages, however. In some cases other group members will be
tempted to tell the leader what they think he or she wants to hear, and in other cases they will compete to impress the decision maker. Which of these decision-making approaches is best? The answer can vary from one culture to another. In Japan, consensus is highly valued. British and Dutch businesspeople also value the "team must be aboard"
approach. On the other hand, Germans, French, and Spanish communicators depend more on the decision of a strong leader and view a desire for consensus as somewhat wishy-washy. 26 Culture notwithstanding, the most effective approach in a given situation depends on the circumstances:
made by an expert, whereas others will benefit from involving the entire group. The importance of the decision is relatively unimportant, it's probably require the participation, and ideally the buy-in, of all members. Time available If time is short, it
may not be possible to assemble the entire group for deliberations. 27 When choosing a decision-making approach, weigh the pros and cons of each before you decide which one has the best chance of success in the situation your groups in the United
States and Canada were ethnically and culturally homogenous. People could expect to work, study, and play with others who were fundamentally similar to themselves. Social forces have changed society dramatically. Over the next two decades, former minority groups will account for more than half of the population in California, Hawaii, New
Mexico, and Texas and almost 50 percent in other states, including New York, New Jersey, and Maryland.28 Changes like these make it more and more likely that we will find ourselves in groups with people from backgrounds different than ours. Fortunately, the growing body of research about communicating across diversity offers encouraging news
about what happens when people from different backgrounds get together. 31 One ingedient in working effectively in diverse groups is understanding the often subtle cultural factors that
shape communication. After surveying over 160,000 members of organizations in sixty countries, Geert Hofstede identified five cultural forces that shape the attitudes and behaviors of groups and individuals. 32 We will examine each of them in the following pages. THE NATURE OF GROUPS CULTURAL IDIOM wishy-washy: lacking decisiveness buy-
in: support 281 258-287_Ch08_Adler 282 3/1/05 PART THREE 8:00 AM Page 282 COMMUNICATION IN GROUPS UNDERSTANDING DIVERSITY BASEBALL IN JAPAN AND THE USA The concept and practice of group harmony or wa is what most dramatically differentiates Japanese baseball from the American game. It is the connecting thread
running through all Japanese life and sports. While "Let It All Hang Out" and "Do Your Own Thing" are mottoes of contemporary American society, the Japanese have their own credo in the well-worn proverb, "The Nail That Sticks Up Shall Be Hammered Down." It is practically a national slogan. Holdouts, for example, are rare in Japane. A player
usually takes what the club deigns to give him and that's that. Demanding more money is evidence that a player is putting his own interests before those of the team. In the pressure-cooker world of U.S. pro sports, temper outbursts are considered acceptable, and at times even regarded as a salutary show of spirit. In Japan, however, a player's
behavior is often considered as important as his batting average. Batting slumps are usually accompanied by embarrassed smiles. Temper tantrums—along with practical joking, bickering, complaining, and other norms of American clubhouse life—are viewed in Japan as unwelcome incursions into the team's collective peace of mind. When [Tokyo]
Giants top pitcher Takashi Nishimoto ignored the instructions of a coach in practice one summer day in 1985, the coach punched him between the eyes. Nishimoto was also forced to apologize and pay a one-hundred thousand yen fine for insubordination. Moreover, untoward behavior is also seen as a sign of character weakness and a "small heart,"
as well as being detrimental to the team's image overall. In Japan, a "real man" is one who keeps his emotions to himself and thinks of others' feelings. Robert Whiting You Gotta Have Wa Individualism versus Collectivism Some cultures value the individual, whereas others value the group. As Table 8-4 shows, the United States is one of the world's
more individualistic societies, along with Canada, Australia, and Britain. By contrast, Latin American and Asian societies are generally more collectivistic. CULTURAL IDIOM holdouts: those who refuse to participate until they receive a satisfactory contract offer 258-287_Ch08_Adler 3/1/05 8:00 AM Page 283 CHAPTER 8 Members of individualistic
cultures view their primary responsibility as being to themselves, whereas members of collectivistic societies feel loyalties and obligations to the groups of which they are members of individualistic societies gain most of their identity and selfesteem from
their own accomplishments, whereas members of collectivistic societies are identified with the groups to which they belong. Individualistic cultures are more attentive to and concerned with the opinions of significant others.33 Individualistic cultures are more attentive to and concerned with the opinions of significant others.
cultures have very different approaches to communication. For example, individualistic cultures are relatively tolerant of conflicts, using a direct, solution-oriented approach. By contrast, members of collectivistic cultures are less direct, solution-oriented approach. By contrast, members of collectivistic cultures are less direct, solution-oriented approach.
communication. Members of collectivistic cultures are more likely to be team players, whereas members of individualistic cultures, North Americans often need to control their desires to dominate group discussions and to "win" in problem-solving situations
Consensus may be a desirable outcome, but it doesn't always come easily to individualists. By contrast, members of collectivistic cultures need to consider when speaking out—even if it means disagreeing—is in the best interests of the group. Power Distance TABLE 8-4 THE NATURE OF GROUPS 283 Cultural Values in Selected Countries (Countries

And what other subject could understand the nature of the little proposition (right stuff/death) they were all dealing with the nature of the little proposition (right stuff/death) they were all dealing with the nature of the little proposition (right stuff/death) they were all dealing with the nature of the little proposition (right stuff/death) they were all dealing with the nature of the little proposition (right stuff/death) they were all dealing with the nature of the little proposition (right stuff/death) they were all dealing with the nature of the little proposition (right stuff/death) they were all dealing with the nature of the little proposition (right stuff/death) they were all deali
words death, danger, bravery, fear were not to be uttered except in the occasional specific instance or for ironic effect. Nevertheless, the subject could be adumbrated in code or by example . . . They diced that righteous stuff up into little bits, bowed ironically to it, stumbled blindfolded around it, groped, lurched, belched, staggered, bawled, sang,
roared, and feinted at it with selfdeprecating humor. Nevertheless!— they never mentioned it by name. Tom Wolfe The Right Stuff Page 284 need a leader or that people who do occupy that role automatically deserve unquestioning obedience. Supervisors, bosses, teachers, and so on certainly have the respect of the members they lead in cultures where
low power distance is the norm—but mostly because they earn it. In low power distance cultures, group members expect leaders to be more considerate of their interests and needs. "After all," they assume, "we're basically equal." Uncertainty Avoidance Some cultures accept—and even welcome—risk, uncertainty, and change 36 Others, characterized
by uncertainty avoidance, are uncomfortable with these unavoidable trends. Instead, they favor stability and tradition. Geography offers no clue to a culture's tolerance of uncertainty. Countries whose members tend to avoid surprises include Greece, Portugal, Turkey, Mexico, and Israel. Among those who are more comfortable with change are
Denmark, Hong Kong, Ireland, and India. It should come as no surprise that uncertainty avoidance affects the way members of groups communicate. They worry more about the future, are more loyal to employers, and accept seniority as the basis for leadership. They view
conflict as undesirable and are also less willing to compromise when disagreements arise. By contrast, members of groups who come from cultures with a higher tolerance for uncertainty are more willing to take risks, more accepting of change, and more willing to break rules for pragmatic reasons. They accept conflict as natural and are willing to
compromise when disagreements occur. Task versus Social Orientation The categories of task and social orientation were originally labeled "masculine" and "feminine," based on traditional views that men are assertive and results orientation were originally labeled "masculine" and "feminine," based on traditional views that men are assertive and results orientation were originally labeled "masculine" and "feminine," based on traditional views that men are assertive and results orientation were originally labeled "masculine" and "feminine," based on traditional views that men are assertive and results orientation were originally labeled "masculine" and "feminine," based on traditional views that men are assertive and results orientation were originally labeled "masculine" and "feminine," based on traditional views that men are assertive and results orientation were originally labeled "masculine" and "feminine," based on traditional views that men are assertive and results orientation were originally labeled "masculine" and "feminine," based on traditional views that men are assertive and results orientation were originally labeled "masculine" and "feminine," based on traditional views that men are assertive and results orientation were originally labeled "masculine" and "feminine," based on traditional views that men are assertive and traditional views
misleading, so we have substituted different labels. Groups in societies with a strong task orientation (Japan, Austria, Switzerland, and Mexico are examples) focus heavily on getting the job done. By contrast, groups in societies with a high degree of social orientation (including all the Scandinavian countries, Chile, Portugal, and Thailand) are more
likely to be concerned about the feelings of members and their smooth functioning as a team. When compared to other countries, the United States falls slightly toward the taskoriented end of the spectrum, and Canada is almost exactly in the middle, balanced between task and social concerns. 37 Task-oriented societies are characterized by a focus or
making the team more competent through training and the use of up-to-date methods. In taskoriented societies members are highly concerned with individual success: advancing to more responsible jobs, better training, and so on. By contrast, groups in socially oriented societies focus more on collective concerns:cooperative problem solving, a
friendly atmosphere, and good physical working conditions. Members may still be interested in solving the problem at hand, but they are reluctant to do so if the personal costs to members—in stress and hard feelings— may be high. 258-287 Ch08 Adler 3/1/05 8:00 AM Page 285 CHAPTER 8 Short- versus Long-Term Orientation Groups play an
important role in many areas of our lives—families, education, employment, and friendships, to name a few. Groups possess several characteristics that distinguish them from other communication contexts. They involve interaction and interdependence over time among a small number of participants with the purpose of achieving one or more goals
Groups have their own goals, as do individual members. Member goals fall into two categories: taskrelated and social. Sometimes individual and group goals are compatible, and social. All these types of groups share certain characteristics
the existence of group norms, individual roles for members, patterns of interaction that are shaped by the group's structure, and the choice of one or more ways of reaching decisions. Groups don't work in a vacuum. The culture in which they work influences the way members communicate with one another. The chapter examined five ways in which
culture influences interaction: individualism versus collectivism, power distance, uncertainty avoidance, task versus social orientation, and short- versus long-term goals. 285 CULTURAL IDIOM Members of some cultures look for quick payoffs, whereas members of other cultures are willing to defer gratification in pursuit of long-range goals. The
willingness to work hard today for a future payoff is especially common in East Asian cultures, including China, Japan, and South Korea. Western industrialized cultures are much more focused on short-term results. As long as all group members share the same orientation toward payoffs, the chances for harmony are good. When some people push for a
quick fix, while others urge patience, conflicts are likely to arise. It's easy to see how a society's orientation toward short- or long-term goals, task or social aspects of groups, uncertainty, individuality, and power distance can make a tremendous difference in how a group operates. Whether the group is an athletic team, a military unit, a working group, or
a family, the principle is the same. Cultural values shape what groups communicate about and how they interact. Cultural differences don't account for every difference in group functioning, of course, but they do provide a common set of assumptions that exerts a subtle yet powerful effect on communication. Understanding Human Communication Web site at www.oup.com/us/uhc. Frey, Lawrence R., ed. Handbook of Group Communication scholars provide state-of-the-art reviews on a variety of grouprelated topics, including influence, creativity, technology, and
socialization. 1. A group of classmates formed to develop and present a class research project Keyton, Joann, and Lawrence R. Frey, ed., New Directions in Group Communication. Thousand Oaks, CA: Sage, 2002. 2. A group of neighbors who is meeting for the first
time to persuade the city to install a stop sign at a dangerous intersection This research-based chapter details the influence of individual personality styles on a group of fellow employees who will be sharing new office space 4. Choosing the Best Decision-
Making Approach Describe which of the decision-making approaches listed on pages 279-281 would be most appropriate in each of the following situations. Explain why your recommended approach is the best one for this situation. Larson, Carl E., and Frank M.J.LaFusto. Team Work: What Must Go Right/What Can Go Wrong. Newbury Park, CA: Sage
1989. Larson and LaFusto interviewed members of a variety of successful teams: cardiac surgeons, members of a Mount Everest climbing expedition, a championship football team, and the developers of the IBM personal computer. Based on their findings, the authors offer a list of the principles that are essential for successful teams. 258-
287 Ch08 Adler 3/1/05 8:00 AM Page 287 CHAPTER 8 Rothwell, J. Dan. In Mixed Company, 5th ed. Belmont, CA:Wadsworth, 2004. This is a readable, comprehensive look at the process of communication in small groups. The book does an excellent job of summarizing literally hundreds of research studies in a manner that makes their value in
everyday interaction clear. This book is ideal for readers looking for more information on group communication. Zorn, Theodore E., Jr., and George H. Tompson. "Comm unication. Thousand Oaks, CA: Sage, 2002. For career-minded readers
this essay offers insights into the communication skills of high-level managers. Feature Films For descriptions of each film below and descriptions of other movies that illustrate group interactions, see the CD-ROM that came with this book, and the Understanding Human Communication Web site at www.oup.com/us/uhc. Group and Individual Goals
Remember the Titans (2000). Rated PG. In 1971 a formerly all-white Virginia high school is integrated, and few members of the football team are happy. Herman Boone (Denzel Washington) is hired by the school board to create a cohesive team out of two basically hostile and racially isolated groups. The drama captures the tension between players'
individual goals (to achieve stardom and stick with members of their own ethnic group) and the collective need to win. Wizard of Oz (1939). Rated G. This much-loved story illustrates how group members can achieve their personal goals by working together toward a common purpose. The Tin Man seeks a heart, the Cowardly Lion wants courage, the
Scarecrow wants a brain, and Dorothy wants to go home to Kansas. All the adventurers realize that helping one another famous band of adventurers realize that helping one another famous band of adventurers realize that helping one another famous band of adventurers.
Nest (1975). Rated R. R. P. McMurphy (Jack Nicholson) is a perfectly sane convict who is sent to a mental institution as a punishment for troublemaking. As he begins to rally the patients' self-confidence, cohesiveness, and assertiveness, the control-hungry Nurse Ratched (Louise Fletcher) recognizes McMurphy is a threat to her dominion. Conflict in
Groups Almost Famous (2000). Rated R. Young journalist William Miller's eyes, we get a picture of the forces that affect the band as it goes on tour. For example, the group's vocalist and the lead guitarist, each of whom wants maximum recognition, illustrate the clash between
individual and group goals. Group Norms Dangerous Minds (1995). Rated R. Louanne Johnson (Michelle Pfeiffer) takes over as English teacher for a class of tough inner-city students excited about literature and
learning. Although the focus is on Johnson's role in this transformation, the shift in the class's norms nicely illustrates how groups have their own standards of what counts as appropriate behavior. The Right Stuff (1983). Rated PG. This film (like Tom Wolfe's book, upon which it was based) chronicles the history of the original seven U.S. astronauts in
the early days of America's space exploration program. More than detailing the astronauts' physical accomplishments, the film examines the attitudes that led them to risk death and their reactions to being treated as heroes. It contains many examples of the unspoken norms that these men developed to govern their approach to their jobs, one
another, and the world at large. 288-323 Ch09 Adler 3/1/05 8:00 AM Page 288 AFTER STUDYING THE MATERIAL IN THIS CHAPTER . . . You should understand: 1. The advantages of solving problems in groups and drawbacks of several common discussion formats. 3. The advantages and drawbacks of several common discussion formats.
computer-mediated groups. 4. The steps in the rational problemsolving method. 5. The developmental stages in a problem-solving group. 6. The factors that contribute to better informed members, balanced participation, and freedom from
excessive conformity. You should be able to: 1. Use the problem-solving steps outlined in this chapter in solving a group task. 2. Decide when to hold face-to-face group meetings, and know when a computermediated format would be more efficient and effective. 3. Suggest ways to build the cohesiveness and participation in a group. 4. Analyze the
sources of leadership and power in a group. 5. Suggest the most effective leadership approach for a specific group and suggest more-effective ways of communicating. 288-323_Ch09_Adler 3/1/05 8:00 AM Page 289 CHAPTER HIGHLIGHTS In this chapter we will discuss solving
problems in groups, including: When to use (and not use) groups for solving problems while groups can solve problems in many different ways, the most successful groups: The pros and cons of computer-mediated groups while groups can solve problems are best for different ways, the most successful groups: The pros and cons of computer-mediated groups can solve problems are best for different ways, the most successful groups:
Understand the stages groups experience while working on a problem Maintain positive relationships and an optimal level of cohesiveness You will see that leadership and team member influence comes in many forms: There are many
different leadership styles, which are effective in different circumstances Finally, we'll look at the dangers to effective problems in Groups 288-323_Ch09_Adler 290 COMMUNICATION IN GROUPS CULTURAL IDIOM Muzak: bland instrumental arrangements arrangement for the dangers to effective problems in Groups 288-323_Ch09_Adler 290 COMMUNICATION IN GROUPS CULTURAL IDIOM Muzak: bland instrumental arrangements for the dangers to effective problems in Groups 288-323_Ch09_Adler 290 COMMUNICATION IN GROUPS CULTURAL IDIOM Muzak: bland instrumental arrangements for the dangers to effective problems in Groups 288-323_Ch09_Adler 290 COMMUNICATION IN GROUPS CULTURAL IDIOM Muzak: bland instrumental arrangements for the dangers are also become a supplication of the d
of popular songs which are often played in elevators, stores, and restaurants Twinkies: a cream-filled snack cake ditty: a short, simple poem wind up with: have on the other hand: from another point of view Chapter 8 described various types of groups—learning, growth, social, and problem-solving groups. Of all these, problem-solving groups have
been studied most intensively by social scientists. After we understand the nature of problems, as we define it here, doesn't refer only to situations where something is wrong. Perhaps meeting challenges and performing tasks are better terms. After you recognize this fact, you can see that problem
solving occupies a major part of working life. The figures from just one company illustrate the scope of group problem solving: At 3M Corporation, managers spend a total of 4.4 million hours per year in meetings, at a cost to the company of $78.8 million in salaries. I Away from work, groups also meet to solve problems: Nonprofit organizations plan
of leadership, defining that important term and suggesting how groups can be led most effectively. Finally, it will list several common problems task-oriented groups can encounter and describe how to overcome them. PROBLEM SOLVING IN GROUPS: WHEN AND WHY To many people, groups are to communication what Muzak is to music or
Twinkies are to food—a joke. The snide remark, "A camel is a horse designed by a committee," reflects this attitude, as does this ditty: Search all your parks in all your par
wasted in groups. On the other hand, it's unfair to view all groups as bad, especially when this accusation implies that other types of communication are by nature superior. After all, we also have wasted time listening to boring lectures, reading worthless books, and making trivial conversation. So what's the truth? Is group problem solving a waste of
effort, or is it the best way to manage a task? As with most matters, the truth falls somewhere between these two extremes. Groups do have their shortcomings, which we will discuss in a few pages. But extensive research has shown that when these shortcomings, which we will discuss in a few pages. But extensive research has shown that when these shortcomings, which we will discuss in a few pages. But extensive research has shown that when these shortcomings can be avoided, groups are clearly the most effective way to handle many tasks.
Advantages of Group Problem Solving Research over fifty years that has compared problem solving by groups to that by individuals shows that, in most cases, groups can produce more solutions to a problem than individuals shows that, in most cases, groups can produce more solutions to a problem than individuals shows that, in most cases, groups can produce more solutions to a problem than individuals working alone—and that the solutions will be of higher quality.3 Groups have proved superior at a wide range of tasks—
everything from assembling jigsaw puzzles to solving complex reasoning problems. There are several reasons why groups are effective. 4 288-323 Ch09 Adler 3/1/05 8:00 AM Page 291 CHAPTER 9 SOLVING PROBLEMS IN GROUPS 291 ONCE UPON A SEPTEMBER DAY—Another meeting! One after another without coming up with a proposal that
would fly. This one took place in early September and (not surprisingly) only a few people showed up—12, to be precise. And so they talked for some days and finally came up with a plan for still another meeting, eight months hence. It was not finally came up with a plan for still another meeting, eight months hence. It was not finally came up with a plan for still another meeting, eight months hence. It was not finally came up with a plan for still another meeting, eight months hence. It was not finally came up with a plan for still another meeting, eight months hence. It was not finally came up with a plan for still another meeting, eight months hence. It was not finally came up with a plan for still another meeting, eight months hence. It was not finally came up with a plan for still another meeting, eight months hence up with a plan for still another meeting, eight months hence. It was not finally came up with a plan for still another meeting, eight months hence up with a plan for still another meeting, eight months hence up with a plan for still another meeting, eight months hence up with a plan for still another meeting, eight months hence up with a plan for still another meeting, eight months hence up with a plan for still another meeting, eight months hence up with a plan for still another meeting and the plan for s
that the September site had been unpleasant—on the contrary, the facilities were quite good—but variety in meeting places might induce more individuals to attend. Of the 74 invitees, 55 showed up. But they didn't all come at once. They were supposed to convene on Monday, May 14, but it wasn't until Friday, May 25, that enough were present to
conduct business. They decided to work diligently from that day on until they finished their proposal. They even agreed to put a lid on their deliberations. They were a relatively young group; the average age was 42. The youngest was 30 and the oldest 82 and prone to nod during long meetings. Although some were lackluster in ability, most were able
and would later move to high executive positions. They were together for 116 days, taking off only Sundays and 12 other days. And you might have guessed it: During a very hot summer they were without air conditioning. In addition to the formal sessions of the entire group, much of their work was done in committee and after hours. The formal
sessions sometimes got out of hand. One faction had come with a proposal that was almost the reverse of an outline offered by another group. The advocates of each seemed unwilling to bend, and by the end of June tempers were flaring so much that the oldest participant suggested beginning each session with an invocation. By early June, they got
wind of a way out of their impasse: Adopt a portion of each plan. By compromising, they might be better able to sell their product to a broad market. Yet even this task of drawing the line between two extremes was not easy, and so some decided to go home or back to their offices. It simply was not worth the effort. Even among those who remained
there was still criticism of the final proposal. It was much too short, some argued—only 4,000 words! It was scarcely enough to fill a few sheets of paper. But 39 of them felt it was the best they could come up with. It was good enough to sign, which they did on the 17th day of September, 1787. And they
called their proposal the Constitution of the United States. Thomas V. DiBacco RESOURCES For many tasks, groups possess a greater collection of resources than do most individuals. Sometimes the resources are physical. For example, three or four people can put up a tent or dig a ditch better than a lone person. But on other problems the pooled
resources lead to qualitatively better solutions. Think, for instance, about times when you have studied with other students for a test, and you will remember how much better the group was at preparing for all the questions that might be asked and at developing answers to them. (This, of course, assumes that the study group members cared enough
about the exam to have studied for it before the group meeting.) Groups not only have more resources than individuals, but also through interaction among the members they are better able to mobilize them. Talking about an upcoming test with others can jog your memory about items you might not have thought of if you had been working alone.
CULTURAL IDIOM to put a lid on: to limit the time spent to nod: to fall asleep out of hand: out of control ACCURACY Another benefit of group work is the increased likelihood of catching errors. At one time or another, we all make stupid mistakes, like the man who built a boat in his basement and then wasn't able to get it out the door. Working in a
group increases the chance that foolish errors like this won't slip by. Some- got wind of: learned about jog your memory: remind yourself 288-323_Ch09_Adler 292 3/1/05 PART THREE 8:00 AM Page 292 COMMUNICATION IN GROUPS times, of course, errors aren't so obvious, which makes groups even more valuable as an error-checking
mechanism. Another side to the error-detecting story is the risk that group members will support each other in a bad idea. We'll discuss this problem later in this chapter when we focus on conformity. COMMITMENT Besides coming up with superior solutions, groups also generate a higher commitment to carrying them out. Members are most likely to
accept solutions they have helped create, and they will work harder to carry out those solutions. This is an especially important principle for those in authority, such as supervisors, teachers, and parents. As professors, we have
seen the difference between the sullen compliance of students who have been forced to accept a policy with which they disagree and the much more willing cooperation of students who have been forced to accept a policy with which they disagree and the much more willing cooperation of students who have been forced to accept a policy with which they disagree and the much more willing cooperation of students who have been forced to accept a policy with which they disagree and the much more willing cooperation of students who have been forced to accept a policy with which they disagree and the much more willing cooperation of students who have been forced to accept a policy with which they disagree and the much more willing cooperation of students who have been forced to accept a policy with which they disagree and the much more willing cooperation of students who have been forced to accept a policy with which they disagree and the much more willing cooperation of students who have been forced to accept a policy with which they disagree and the much more willing cooperation of students who have been forced to accept a policy with which they disagree and the much more willing cooperation of students who have been forced to accept a policy with which they disagree and the much more will be a policy with the much 
approach of imposing a decision without discussion is most effective. We will discuss this question on leadership later in this chapter. When to be democratic and when to be directive in the section on leadership later in this chapter. When to Use Groups for Problem.
information than a single person possesses or can gather. For example, a group of friends planning a large New Year's party will probably have a better event if they pool their ideas than CULTURAL IDIOM jog your memory: remind yourself 288-323 Ch09 Adler 3/1/05 8:00 AM Page 293 CHAPTER 9 if one person tries to think of everything. Some
jobs also require more time and energy than one person can spare. Putting on the New Year's party could involve a variety of tasks: inviting the guests, hiring a band, finding a place large enough to hold the party, buying food and drinks, and so on. It's both unrealistic and unfair to expect one or two people to do all this work. ARE INDIVIDUALS
TASKS INTERDEPENDENT? Remember that a group is more than a collection of individuals working side by side. The best tasks for groups are ones where the individuals can help one another in some way. Think of a group of disgruntled renters considering how to protest unfair landlords. In order to get anywhere, they realize that they have to
assign areas of responsibility to each members, publicizing their complaints, and so on. It's easy to see that these jobs are all interdependent: Getting new members, for example, will require publicizing their complaints will involve showing how the renters' legal rights are being violated. One manager
let employees know how valuable they are with the following memo: YOU ARX A KXY PXRSON Xvxn though my typxwritxr is an old modxl, it works vxry wxll—xxcxpt for onx kxy out of whack sxxms to ruin thx wholx xffort.
You may say to yoursxlf—Wxll I'm only onx pxrson. No onx will noticx if I don't do my bxst. But it doxs makx a diffxrxncx bxcausx to bx xffxctivx an organization nxxds activx participation by xvxry onx to thx bxst of his or hxr ability. So thx nxxt timx you think you arx not important, rxmxmbxr my old typxwritxr. You arx a kxy pxrson. Even when
everyone is working on the same job, there can be interdependence if different members fulfill the various functional roles described in Chapter 8. Some people might be better at task-related roles like information giving, diagnosing, and summarizing. Others might contribute by filling social roles such as harmonizing, supporting, or relieving tension
People working independently simply don't have the breadth of resources to fill all these functions. IS THERE MORE THAN ONE DECISION OR SOLUTION? Groups are best suited to tackling problems that have no single, cut-and-dried answer: What's the best way to boost membership in a campus organization? How can funds be raised for a
charity? What topic should the group choose for a class project? Gaining the perspectives of every member boosts the odds of finding high-quality answers to questions like these. By contrast, a problem with only one solution won't take full advantage of a group's talents. For example, phoning merchants to get price quotes and looking up a series of
books in the library don't require much creative thinking. Jobs like these can be handled by one or two people working alone. Of course, it may take a group meeting to decide how to divide the work to get the job done most efficiently. SOLVING PROBLEMS IN GROUPS 293 CULTURAL IDIOM cut-and-dried: the usual thing boosts of odds of: increases
destination, schedule, and budget would be asking for trouble, because their decisions would almost certainly disappoint at least some of the people who weren't consulted. It would be far smarter to involve everyone in the most important decisions, even if doing so took more time. After the key decisions were settled, it might be fine to delegate
relatively minor issues to one or two people. GROUP PROBLEM-SOLVING FORMATS Groups meet to solve problems in a variety of settings and for a wide range of reasons. The formats they use are also varied. Some groups meet to solve problems in a variety of settings and for a wide range of reasons. The formats they use are also varied.
the citizens who attend a typical city council meeting or voters who attend a candidates' debate. In other cases, the audience members are simply interested spectators, as occurs in televised discussions such as Meet the Press and Face the Nation. Types of Problem-Solving Groups This list of problem-solving formats and approaches is not exhaustive,
but it provides a sense of how a group's structure can shape its ability to come up with high-quality solutions. CULTURAL IDIOM to put a lid on: to limit the time spent to nod: to fall asleep out of hand: out of control got wind of: learned about 1. Buzz groups When the number of members is too large for effective discussion, buzz groups can be used to
maximize effective participation. In this approach, subgroups (usually consisting of five to seven members) simultaneously address an issue and then report back to the group at large. The best ideas of each buzz group are then assembled to form a high-quality decision. 2. Problem census This approach is useful when groups want to identify
person who contributed each item isn't listed, issues are separated from personalities. As similar items are read and posted, the leader and members consolidate similar items into a number of ideas that the group needs to address. 3. Focus group Focus groups are used as a
market research tool to enable sponsoring organizations to learn how potential users or the public at large regards a new product or idea. Unlike other groups discussed here, focus groups don't include decision makers to figure out how people
PROBLEMS IN GROUPS Some Communication Factors Associated with Group Productivity The group contains the smallest number of members are clear about and accept their roles, which match the abilities of each member. Group norms encourage
high performance, quality, success, and innovation. The group members have sufficient time together to develop a mature working unit and accomplish its goals. The group is highly cohesive and cooperative. The group is highly cohesive and decisions it must make. Periods of conflict are frequent but brief,
Dynamics and Productivity," Small Group Research 29 (1998): 371-393. erence book for parliamentary procedure is the revised edition of Robert's Rules of Order. Although the parliamentary rules may seem stilted and cumbersome, when well used, they do keep a discussion on track and protect the rights of the minority against domination by the
majority. 5. Panel discussion Another common problem-solving format is the panel discussion, in which the participants talk over the topic informally, much as they would in an ordinary conversation. A leader (called a "moderator" in public discussions) may help the discussion along by encouraging the comments of some members, cutting off overly
talkative ones, and seeking consensus when the time comes for making a decision. 6. Symposium In a symposium In a symposium In a symposium the participants divide the topic in a manner that allows each member to deliver in-depth information without interruption. Although this format lends itself to good explanations of each person's decision, the one-person-at-a-time nature of
a symposium won't lead to a group decision. The contributions of the members must be followed by the give-andtake of an open discussion. 7. Forum A forum allows nonmembers to add their opinions to the group's deliberations before the group makes a decision. This approach is commonly used by public agencies to encourage the participation of
citizens in the decisions that affect them. 295 288-323 Ch09 Adler 296 3/1/05 PART THREE 8:00 AM Page 296 COMMUNICATION IN GROUPS Computer-Mediated Groups Face-to-face meetings can be difficult. Just scheduling a session can be maddening: Almost every date or time that one person suggests doesn't work for someone else. If the
participants come from different locations, the time and cost of a meeting can be significant. Challenges don't end after a meeting time is finally arranged. Some members may be late. Others have to leave early. And during the meeting distractions are common: Members are sidetracked by off-the-topic digressions and other distractions. One or more
people dominate the conversation, whereas others rarely speak. Given the drawbacks of meeting in person, the idea of using technology to create other ways of working together has strong appeal. One approach is teleconferencing: a multiway phone call in which members from several locations can collaborate. Other approaches involve compute
conferencing, in which members exchange messages over digital networks. In a synchronous—chat room-computer conference members com
                                                                                                                                                                          municate in real time as if they were talking over the phone or meeting in person. Asynchronous discussions resemble e-mail: Group members don't have to be online on at the same time. They can log on to the
network at their convenience, check messages others have sent, and contribute their own ideas for other team members to read later. In the 1990s, communication researchers began to sort out the advantages and disadvantages of computer conferencing
does have several advantages. Most obviously, it is much easier to schedule and "meet" online, because group members can log on at their convenience, independent of other participants. Furthermore, computermediated
sessions encourage more balanced participation: Members who might have kept quiet in face-to-face sessions are more comfortable "speaking out" online. Also, online meetings generate a permanent record of the proceedings, which can be convenient. Despite their advantages, computer-mediated groups aren't a panacea. The lack of nonverbal cues
makes it difficult to convey and understand members'emotions and attitudes. Mediated meetings may be more convenient, but groups working at a distance take more time and effort than speaking, messages conveyed via computer can lack the detail of spoken
ones. In some cases, members may not even bother to type out a message online that they would have shared in person. Finally, the string of separate messages that is generated in a computerized medium can be hard to track, sort out, and synthesize in a meaningful way. Research comparing the quality of decisions made by face-to-face and online
groups is mixed. Some studies have found no significant differences. Others have found that computer-mediated groups generate more ideas than people meeting in person, although they take longer to reach agreement on which are best. The growing body of research suggests that certain types of mediated communication work better than others
For example, asynchronous groups seem to make better decisions than those functioning in a "chat" mode. Groups who have special decision-support software perform better than ones operating without this advantage. Having a moderator also improves the effectiveness of online groups. 288-323_Ch09_Adler 3/1/05 8:00 AM Page 297 CHAPTER 9
SOLVING PROBLEMS IN GROUPS 297 UNDERSTANDING COMMUNICATION TECHNOLOGY FOR VIRTUAL MEETINGS When a group can't or doesn't need to meet in person, an abundance of affordable tools can make virutal meetings easy to set up and conduct. For teleconferences, most phone companies provide a reasonably
priced service for connecting three or more people. Your phone company can provide details. For the most simple (and free) type of computer conferencing, use one of the common and popular. A number of fee-based
services offer more elaborate tools for conducting computer conferences that include video, PowerPoint, and other types of multimedia. Participants can add their own comments. Webex can be combined with a teleconference so participants can speak to one another as well
as view a shared computer environment. Another service is Microsoft Live Meeting, formerly called PlaceWare (www.main.placeware.com). It presents a "virtual meeting room" that permits voice and computer sharing, and includes a "white board" where participants can sketch out items for others to see. What use does this information have for
groups who want to decide how to meet? Perhaps the most valuable lesson is that online meetings should not replace face-to-face ones, but they can be a supplement to in-person sessions. Combining the two forms of interaction can help groups may
have the potential to solve problems effectively, but they don't always live up to this potential. What makes some groups succeed and others fail? Researchers spent much of the twentieth century asking this question. Two useful answers emerged from their work. A Structured Problem-Solving Approach Although we often pride ourselves on facing
problems rationally, social scientists have discovered that much of the time logic and reason play little part in the way we make decisions. The tendency to use nonrational approaches a problem rationally and
systematically. 9 Just as a poor blueprint or a shaky foundation can weaken a house, groups can fail by skipping one or more of the necessary steps in solving a problem. As early as 1910, John Dewey introduced his famous "reflective thinking" method as a systematic method for solving problems. 10 Since then, other experts have suggested
modifications of Dewey's approach. Some emphasize answering key questions, whereas others seek "ideal solutions" that meet the needs of all members. Research comparing various methods has clearly shown CULTURAL IDIOM the give-and-take: sharing live up to: fulfill expectations 288-323 Ch09 Adler 298 3/1/05 PART THREE 8:00 AM Page 298
COMMUNICATION IN GROUPS CULTURAL IDIOM freewheeling: unrestricted thinking that, although no single approach is best for all situations, a structured procedure produces better results than "no pattern" discussions.11 The following problem-solving model contains the elements common to most structured approaches developed in the last
eighty years: 1. Identify the problem a. What are the group's goals? b. What are individual members' goals? 2. Analyze the problem a. Word the pro
criticism at this stage b. Encourage "freewheeling" ideas c. Develop a large number of ideas d. Combine two or more individual ideas 4. Evaluate the solutions by asking which solution: a. Will best produce the desired changes b. Is most achievable c. Contains the fewest serious disadvantages 5. Implement the plan a. Identify specific tasks b.
Determine necessary resources c. Define individual responsibilities d. Provide for emergencies 6. Follow up on the solution a. Meet to evaluate progress b. Revise approach as necessary IDENTIFY THE PROBLEM Sometimes a group's problem is easy to identify. The crew of a sinking ship, for example, doesn't need to conduct a discussion to
understand that its goal is to avoid drowning or being eaten by a large fish. There are many times, however, when the problems facing a group aren't so clear. As an example, think of an athletic team stuck deep in last place well into the season. At first the problems facing a group aren't so clear. As an example, think of an athletic team stuck deep in last place well into the season. At first the problems facing a group aren't so clear. IN GROUPS 299 letes, not to mention the simple goal of having fun—of playing in the recreational sense of the word. You can probably see that if the coach or team members took a simplistic view of the situation, looking only at the team's win-lose record, analyzing player errors, training methods, and so on, some important problems would probably go
overlooked. In this situation, the team's performance could probably be best improved by working on the basic problems—the frustration of the players about having their personal needs unmet. What's the moral here? That the way to start understanding a group's problem is to identify the concerns of each member. What about groups who don't have
problems? Several friends planning a surprise birthday party and a family deciding where to go for its vacation don't seem to be in the dire straits of a losing athletic team: They simply want to have fun. In cases like these, it may be helpful to substitute the word challenge for the more gloomy word problem. However we express it, the same principle
applies to all task-oriented groups: The best place to start work is to identify what each member seeks as a result of belonging to the group, you are ready to look at the problem in more detail. There are several steps you can follow to accomplish
this important job. Word the Problem as a Probative Question If you have ever seen a formal debate, you know that the issue under discussion is worded as a proposition: "The United States should reduce its foreign aid expenditures," for example. Many problemsolving groups define their task in much the same way. "We ought to spend our vacation
in the mountains, "suggests one family member. The problem with phrasing problems as propositions is that such wording invites people to take sides. Though this approach is fine for formal debates (which are contests rather like football or card games), premature side taking creates unnecessary conflict in most problem-solving groups. A far better
approach is to state the problem as a question. Note that this should be a probative question—an open one that encourages exploratory thinking. Asking, "Should we vacation in the mountains or at the beach?" still forces members to choose sides. A far better approach involves asking a question to help define the general goals that came out during the
problem-identification stage: "What do we want our vacation to accomplish?" (that is, "relaxation," adventure, ""low cost," and so on). Notice that this guestion is truly exploratory. It encourages the family members to work cooperatively, not forcing them to make a choice and then defend it. This absence of an either-or situation boosts the odds that
members will listen openly to one another rather than listening selectively in defense of their own positions. There is even a chance that the cooperative, exploratory climate that comes from wording the question probatively will help the family arrive at consensus about where to vacation, eliminating the need to discuss the matter any further. Gather
Relevant Information Groups often need to know important facts before they can make decisions or even understand the problem. We remember one group of students who determined to do well on a class presentation. One of their goals, then, was "to get an A grade." They knew that, to do so, they would have to CULTURAL IDIOM dire straits:
extremely difficult situation boosts the odds: increases the chances of success 288-323 Ch09 Adler 300 3/1/05 PART THREE 8:00 AM COMMUNICATION IN GROUPS CULTURAL IDIOM damper on: something that reduces or restricts A problem half solved. Charles Kettering Page 300 present a topic that interested both the
instructor and the students in the audience. Their first job, then, was to do a bit of background research to find out what subjects would be well received. They interviewed the instructor, asking what topics had been successes and failures in previous semesters. They tested some possible subjects on a few classmates and noted their reactions. From this topic semesters are to find out what topics had been successes and failures in previous semesters.
research they were able to modify their original probative question—"How can we choose and develop a topic that will earn us an A grade?"—into a more specific one— "How can we choose and develop a topic that contains practical
information that will improve either the audience's social life, academic standing, or financial condition?" Identify Impelling and Restraining Forces After members understand what they are seeking, the next step is to see what forces stand between the group and its goals. One useful tool for this approach is the force field analysis—a list of the forces
that help and hinder the group.12 By returning to our earlier example of the troubled team, we can see how the force field operates. Suppose the team defined its problem-question as "How can we (1) have more fun and (2) grow closer as friends?" One restraining force in Area (1) was clearly the team's losing record. But, more interestingly, discussion
revealed that another damper on enjoyment came from the coach's obsession with winning and his infectiously gloomy behavior when the team failed. The main restraining force in Area (2) proved to be the lack of socializing among team members in nongame situations. The helping forces in Area (2) proved to be the lack of socializing among team members in nongame situations.
members and the confession by most players that winning wasn't nearly as important to them as everyone had suspected. The helping force in Area 2 was the desire of all team members to become better friends. In addition, the fact that members shared many interests was an important plus. It's important to realize that most problems have many
impelling and restraining forces, all of which need to be identified during this stage. This may call for another round of research. After the group is ready to move on to the next step—namely, deciding how to strengthen the impelling forces and weaken the restraining ones. DEVELOP CREATIVE SOLUTIONS After the group
has set up a list of criteria for success, the next job is to develop a number of ways to reach its goal. Considering more than one solution is important, because the first solution may not be the best one. During this development stage, creativity is essential. 13 The biggest danger is the tendency of members to defend their own idea and criticize
others'. This kind of behavior leads to two problems. First, evaluative criticism almost guarantees a defensive reaction from members whose ideas have been attacked. Second, evaluative criticism stifles creativity. People who have just heard an idea rebuked—however politely—will find it hard even to think of more alternatives, let alone share them
openly and risk possible criticism. The following strategies can keep groups creative and maintain a positive climate. 288-323 Ch09 Adler 3/1/05 8:00 AM Page 301 CHAPTER 9 SOLVING PROBLEMS IN GROUPS CREATIVITY KILLERS IN GROUP DISCUSSION Nothing squelches creativity like criticism. Although evaluating ideas is an important part
of problem solving, judging suggestions too early can discourage members from sharing potentially valuable ideas. Here is a list of creativity-stopping statements that people should avoid making in the development phase of group work. "That's ridiculous." "It'll never work." "You're wrong." "What a crazy idea!" "We tried it before, and it didn't
work." "It's too expensive." "There's no point in talking about it." "It's too big a job." "We could look like fools." "It's too big a job." "We could never do that." "It's too risky." "You don't know what you're talking about." Brainstorm Probably the best-known strategy for encouraging creativity and avoiding the dangers just described is
brainstorming.14 There are four important rules connected with this strategy: 1. Criticism Is Forbidden. As we have already said, nothing will stop the flow of ideas more quickly than negative evaluation. 2. "Freewheeling" Is Encouraged. Sometimes even the most outlandish ideas prove workable, and even an impractical suggestion might trigger a
workable idea. 3. Quantity Is Sought. The more ideas generated, the better the chance of coming up with a good one. 4. Combination and Improvement Are Desirable. Members are encouraged to "piggyback" by modifying ideas already suggested and to combine previous suggestions. Although brainstorming is a popular creativity booster, it isn't a
guaranteed strategy for developing novel and high-quality ideas. In some experiments, individuals working alone were able to come up with a greater number of highquality ideas than were small groups.15 Use the Nominal Group Technique Because people in groups often can't resist the tendency to criticize one another's ideas, the nominal group
technique was developed to let members present ideas without being attacked but at the same time to retain the key elements of brainstorming. As the following steps show, the pattern involves alternating cycles of individual work followed by discussion. 1. Each member works alone to develop a list of possible solutions. 2. In round-robin fashion
each member in turn offers one item from his or her list. The item is listed on a chart visible to everyone. Other members may ask questions to clarify an idea, but no evaluation is allowed during this step. 3. Each member privately ranks his or her choice of the ideas in order, from most preferable (five points) to least preferable (one point). The rankings
are collected, and the top ideas are retained as the most promising solutions. 4. A free discussion of the top ideas is held. At this point critical thinking (though not personal criticism) is encouraged. The group continues to discuss until a decision is reached, either by majority vote or consensus. can evaluate the usefulness of each. One good way of identifying the most workable solutions is to ask three questions. 1. Will This Proposal Produce the Desired Changes? One way to find out is to see whether it successfully overcomes the restraining forces in your force field analysis. 2. Can the Proposal Be Implemented by the Group? Can the
members strengthen impelling forces and weaken restraining ones? Can they influence others to do so? If not, the plan isn't a good one. 3. Does the Proposal Contain Any Serious Disadvantages? Sometimes the cost of achieving a goal is too great. For example, one way to raise money for a group is to rob a bank. Although this plan might be workable
it raises more problems than it solves. IMPLEMENT THE PLAN Everyone who makes New Year's resolutions knows the difference between making a decision and carrying it out. There are several important steps in developing and implementing a plan of action. 1. Identify Specific Tasks to Be Accomplished. What needs to be done? Even a relatively
simple job usually involves several steps. Now is the time to anticipate all the tasks facing the group. Remember everything now, and you will avoid a last-minute rush later. 2. Determine Necessary Resources. Identify the equipment, material, and other resources the group will need in order to get the job done. 3. Define Individual Responsibilities.
Who will do what? Do all the members know their jobs? The safest plan here is to put everyone's duties in writing, including the due date. This might sound compulsive, but experience shows that it increases the chance of having jobs done on time. 4. Provide for Emergencies. Murphy's Law states, "Whatever can go wrong, will." Anyone experienced in
group work knows the truth of this law. People forget or welsh on their obligations, get sick, or quit. Machinery breaks down. (One corollary of Murphy's Law is "The copying machine will be out of order whenever it's most needed.") Whenever possible, you ought to develop contingency plans to cover foreseeable problems. Probably the single best
suggestion we can give here is to plan on having all work done well ahead of the deadline, knowing that, even with last-minute problems, your time cushion will allow you to finish on time. FOLLOW UP ON THE SOLUTION Even the best plans usually require some modifications after they're put into practice. You can improve the group's effectiveness
and minimize disappointment by following two steps. 1. Meet Periodically to Evaluate Progress. Follow-up meetings should be part of virtually every good plan. The best time to schedule these meetings is as you put the group's plan to work. At that time, a good leader or member will suggest: "Let's get together in a week (or a few days or a month,
depending on the nature of the task). We can see how things are going and take care of any problems." 2. Revise the Group's Approach as Necessary. These follow-up meetings will often go beyond simply congratulating everyone for coming up with a good solution. Problems are bound to arise, and these periodic meetings, in which the key players are
present, are the place to solve them. 288-323 Ch09 Adler 3/1/05 8:00 AM Page 303 CHAPTER 9 SOLVING PROBLEMS IN GROUPS 303 Although these steps provide a useful outline for solving problems, they are most valuable as a general set of guidelines and not as a precise formula that every group should follow. As Table 9-2 suggests, certain
parts of the model may need emphasis depending on the nature of the specific problem; the general approach will give virtually any group a useful way to consider and solve a problem. Despite its advantages, the rational, systematic problem group a useful way to consider and solve a problem.
doesn't possess creative talent, a rational and systematic approach to solving problems won't do much good. Despite its drawbacks, the rational approach does increase the problem, come up with solutions, and carry them out
better than they could probably do without a plan. Developmental Stages in Problem-Solving Groups When it comes to solving problems in groups, research shows that the shortest distance to a solution isn't always a straight line. Communication scholar Aubrey Fisher analyzed tape recordings of problem-solving groups and discovered that many
successful groups seem to follow a four-stage process when arriving at a decision. 16 As you read about his findings, visualize how they have applied to problem and one another tentatively. In some groups in your experience. In the orientation stage, members approach the problem and one another well, and even in
ones where they are well acquainted they may not know one another's position on the issue at hand. For these reasons, people are reluctant to take a stand during the orientation stage. Rather than state their own position clearly and unambiguously, they test out possible ideas cautiously and rather politely. There is little disagreement. This
cautiousness doesn't mean that members agree with one another; rather, they are sizing up the situation before asserting themselves. The orientation stage can be viewed as a calm before the strong feelings about the problem
Consider allowing a period of emotional ventilation before systematic problem solving. Task difficulty is high. Follow the structure of the problem-solving method carefully define needs of all members, and seek solutions that satisfy all needs
High level of technical quality required. Emphasize evaluation of ideas; consider inviting outside experts. IN GROUPS forcement Rein ce en rg Orientation orientat
successful group enters the conflict stage. During this stage, members take strong positions and defend them against those who oppose their viewpoint. Coalitions are likely to form, and the discussion may become polarized. The conflict needn't be personal: It can focus on the issues at hand while preserving the members' respect for one another. Even
when the climate does grow contentious, conflict seems to be a necessary stage in group development. The give-and-take of discussion tests the quality of ideas, and weaker ones may suffer a well-deserved death here. 17 After a period of conflict, effective groups move to an emergence stage. One idea might emerge as the best one, or the group might emerge as the best one, or the group might emerge as the best one idea might emerge as the best on
combine the best parts of several plans into a new solution. As they approach consensus, members back off from their dogmatic positions. Statements become more tentative again: "I guess that's a pretty good idea," I can see why you think that way." Finally, an effective group reaches the reinforcement stage. At this point not only do members
accept the group's decision, but also they endorse it. Whereas members used evidence to back up differing positions in the conflict stage, now they find evidence that will support the decision. Even if members disagree with the outcome, they do not voice their concerns. There is an unspoken drive toward consensus and harmony. Ongoing groups can
expect to move through this four-stage process with each new issue, so that their interaction takes on a cyclic pattern (see Figure 9-1). In fact, a group who deals with several issues at once might find itself in a different stage for each problem. In one series of studies, slightly less than 50 percent of the problem-solving groups examined followed this
pattern.18 The same research Conflict CULTURAL IDIOM t a ti on PART THREE 8:00 AM O rie n 304 3/1/05 D 288-323 Ch09 Adler Figure 9-1 Cyclical Stages in an Ongoing Problem-Solving Group. Source: From John K. Brilhart, Gloria J. Galanes, and Katherine Adams, Effective Group Discussion, 10th ed. (New York: McGraw-Hill, 2001), p. 289.
288-323 Ch09 Adler 3/1/05 8:00 AM Page 305 CHAPTER 9 showed that a smaller percentage of groups (about 30 percent) didn't follow a cyclical pattern. Instead, they skipped the preliminary phases and focused on the solution. What is the significance of the findings? They tell us that, like children growing toward adulthood, many groups can expect
to pass through phases. Knowing that these phases are natural and predictable can be reassuring. It can help curb you feel less threatened when the inevitable and necessary conflicts take place. Understanding the nature of emergence and reinforcement for emergence and reinforcement for
can help you know when it is time to stop arguing and seek consensus. MAINTAINING POSITIVE RELATIONSHIPS The task-related advice in the preceding pages will be little help if the members of a group don't get along. We therefore need to look at some ways to maintain good relationships among members. Many of the principles described
earlier in this book apply here. Because these principles are so important, we will review them here. Basic Skills Groups are most effective when members feel good about one another.19 Probably the most important ingredient in good personal relationships is mutual respect, and the best way to demonstrate respect for the other person is to lister
carefully. A more natural tendency, of course, is to assume you understand the other members' positions and to interrupt or ignore them. Even if you are right, however, this tendency can create a residue of ill feelings. On the other hand, careful listening can at least improve the communication climate—and it may even teach you something. Groups
are bound to disagree sooner or later. When they do, the win-win problem-solving methods outlined in Chapter 7 boost the odds of solving the immediate issue in the most constructive way. 20 As you read in Chapter 8, taking votes and letting the majority rule can often leave a sizable minority whose unhappiness can haunt the group's future work.
Consensus is harder to reach in the short term but far more beneficial in the long term. Building Cohesiveness can be defined as the totality of forces that causes members to feel themselves part of a group and makes them want to remain in that group. You might think of cohesiveness can be defined as the totality of forces that causes members to feel themselves part of a group and makes them want to remain in that group. You might think of cohesiveness can be defined as the totality of forces that causes members to feel themselves part of a group and makes them want to remain in that group. You might think of cohesiveness can be defined as the totality of forces that causes members to feel themselves part of a group and makes them want to remain in that group. You might think of cohesiveness can be defined as the totality of forces that causes members to feel themselves part of a group and makes them want to remain in that group. You might think of cohesiveness can be defined as the totality of forces that causes members to feel themselves part of a group and makes them want to remain in that group. You might think of cohesiveness can be defined as the total themselves part of a group and makes them want to remain in that group. You might think of cohesiveness can be defined as the total themselves are the part of the total themselves are the part of the part of the total themselves are the part of the part of the total themselves are the part of the part of
them a collective sense of identity. Highly cohesive groups communicate differently than less cohesive ones. Members spend more time interacting, and there are more expressions of positive feelings for one another. They report more satisfaction with the group and its work. In addition, co- SOLVING PROBLEMS IN GROUPS 305 CULTURAL IDIOM on
the other hand: from the other point of view boost the odds of: increase the chances of success 288-323_Ch09_Adler 306 COMMUNICATION IN GROUPS hesive groups have the
potential to be productive. In fact, one study revealed that cohesiveness proved to be the best predictor of a group's performance, both initially and over time. 22 Despite its advantages, cohesiveness is no guarantee of success: If the group is united in supporting unproductive norms, members will feel close but won't get the job done. For example,
consider members of a group of employees who have a boss they think is incompetent and unfair. They might grow quite cohesive in their opposition to the perceived tyranny, spending hours after (or during) work swapping complaints. They might even organize protests, work slowdowns, grievances to their union, or mass resignations. All these
responses would boost cohesiveness, but they would not necessarily make the company more successful nor help the employees. Research has disclosed a curvilinear relationship between cohesiveness and productivity: Up to a certain point, productivity increases as group members become a unified team. Beyond this point, however, the mutual
attraction members feel for one another begins to interfere with the group's efficient functioning. Members may enjoy one another's company, but this enjoyment can keep them from focusing on the job at hand. The goal, then, is to boost cohesiveness in a way that also helps get the job done. There are eight factors that can bring about these goals. 1
Shared or Compatible Goals People draw closer when they share a similar aim or when their goals can be mutually satisfied. For example, members of a conservation group might have little in common until a part of the countryside they all value is threatened by development. Some members might value the land because of its beauty; others, because
it provides a place to hunt or fish; and still others, because the nearby scenery increases the value of their property; but as long as their goals are compatible, this collection of individuals will find that a bond exists that draws them together. 2. Progress toward These Goals While a group is making progress, members feel highly cohesive; when progress
stops, cohesiveness decreases. All other things being equal, players on an athletic team feel closest when the team and less willing to identify themselves as members of the group. 3. Shared Norms and Values Although successful groups will
tolerate and even thrive on some differences in members are proper will reduce cohesiveness. If enough members hold different ideas of what behavior, wide variation in the group's definition of what behavior, wide variation in the group's definition of what behavior is acceptable, the group is likely to break up. Disagreements over values or norms can fall into many areas, such
as humor, finance, degree of candor, and proportion of time allotted to work and play. 4. Lack of Perceived Threat between Members cohesive group members see no threat to their status, dignity, and material or emotional well-being. When such interpersonal threats do occur, they can be very destructive. Often competition arises within groups, and
as a result members feel threatened. Sometimes there is a struggle over who will be the nominal leader. At other times, members view others as wanting to take over a functional role (prob- 288-323 Ch09 Adler 3/1/05 8:00 AM Page 307 CHAPTER 9 5. 6. 7. 8. lem solver, information giver, and so on), either through competition or criticism.
Sometimes the threat is real, and sometimes it's only imagined, but in either case the group must neutralize it or face the consequences of reduced cohesive when their needs can be satisfied only with the help of other members. When a job can be done just as well by one person alone, the
need for membership decreases. This factor explains the reason for food cooperatives, neighborhood yard sales, and community political campaigns. All these activities enable the group's existence or image
(groups have self-concepts, just as individuals do), they grow closer together. Almost everyone knows of a family whose members seem to fight constantly among themselves—until an outsider criticizes one of them. At this point, the internal bickering stops, and for the moment the group unites against its common enemy. The same principle often
works on a larger scale when nations bind up their internal differences in the face of external aggression. Mutual Perceived Attractiveness and Friendship are a result of the points just listed, yet groups often do become close simply
because the members like each other. Social groups are a good example of a type of group that stays together because its members enjoy one another's company. Shared Group Experience, they draw together because its members enjoy one another's company.
feel close and stay in touch for years after; it also accounts for the ordeal of fraternity pledging and other initiations. Many societies have rituals that all members share, thus increasing the group's cohesiveness. SOLVING PROBLEMS IN GROUPS 307 CULTURAL IDIOM bickering; quarreling through thick and thin: through the group's cohesiveness.
It's important to realize that the eight factors just described interact with one another, often in contradictory ways. For instance, members of many groups are good friends who have been through thick and thin together (cohesiveness builders), but they find themselves less dependent on each other than before and now struggle over playing certain
roles.In cases like this, cohesiveness can be figured as the net sum of all attracting and dividing forces. CRITICAL THINKING PROBE THE PROS AND CONS OF COHESIVENESS 1. Based on the information on pages 305-307 of this chapter and your own experiences, give examples of groups who meet each of the following descriptions: a. A level of
cohesiveness so low that it interferes with productivity b. An optimal level of cohesiveness c. A level of cohesiveness so high that it interferes with productivity 2. For your answers to a and c, offer advice on how the level of cohesiveness so high that it interferes with productivity 3. Are there ever situations where maximizing cohesiveness is more
important than maximizing productivity? Explain your answer, supporting it with examples. 288-323 Ch09 Adler 308 3/1/05 PART THREE 8:00 AM Page 308 COMMUNICATION IN GROUPS LEADERSHIP AND POWER IN GROUPS Leadership . . . power . . . influence. For most of us, being in control of events ranks not far below parenthood in the
hierarchy of values. "What are you, a leader or a follower?" we're asked, and we know which position is the better one. Even in groups without designated leaders, some members are more influential than others, and those who aren't out front at least some of the time are likely to feel frustrated. The following pages will focus on how communication
operates to establish influence. We will begin by looking at sources of power in groups, showing that not all influence rests with the person who is nominally in charge. We will then take a look at the communication behaviors that work best when one communicator is designated as the leader—or wants to acquire that role. Power in Groups We can
begin by defining power as the ability to influence others. A few examples show that influence can appear in many forms. 23 
In a tense meeting, apartment dwellers are arguing over crowded parking and late-night noise. One tenant cracks a joke and lightens up the tense atmosphere. A project team at work is trying to come up with a new
way to attract customers. The youngest member, fresh from a college advertising class, suggests a winning idea. Workers are upset after the boss passes over a popular colleague and hires a newcomer for a management position. Despite their anger, they accept the decision after the colleague and hires a newcomer for a management position.
anyhow. A teacher motivates students to meet a deadline by awarding bonus points for projects that are turned in late. These examples suggest that power comes in a variety of forms. We will examine each of them now. LEGITIMATE POWER Sometimes the ability to influence others comes from legitimate
power (sometimes called position power). Legitimate power arises from the title one holds—supervisor, parent, or professor, for example. In many cases we follow the directions of others without knowing much about their qualifications, simply because we respect the role they occupy. In church we honor the request of the minister, and in courts we
rise at judges'approach primarily because their positions confer authority on them. Social scientists use the term nominal leader to label the person who is officially designated as being in charge of a group. Realize, however, that not all legitimate power resides with nominal leaders. The men and women with orange caps and vests who direct traffic at
road repair sites are unlikely to be in charge of the project, yet they possess legitimate power in the eyes of motorists, who stop and start at their command. The easiest way to acquire legitimate power is to have it conferred upon you by an outside authority. But being appointed isn't the only path to legitimate 288-323_Ch09_Adler 3/1/05 8:00 AM
Page 309 CHAPTER 9 power: Even in groups who begin with no official leader, members can acquire legitimate power by the acknowledgment of others. Juries elect forepersons, and committees elect chairpersons. Teams choose a captain. Negotiating groups elect spokespeople. The subject of leadership emergence has been studied extensively. 24
Researchers have discovered several communicator characteristics that members who emerge as leaders possess: They speak up in group discussions without dominating others, they demonstrate their competence on the subject being discussed, they observe group norms, and they have the support of other influential members. COERCIVE POWER
Coercive power occurs when influence comes from the threat or actual imposition of some unpleasant consequences. In school, at home, on the job, and in many other settings we sometimes do what others tell us, not because of any respect for the wisdom of their decisions but rather because the results of not obeying would be unpleasant. Economic
hardship, social disapproval, undesirable work, even physical punishment—all are coercive forces that can shape behavior. There are three reasons why coercion usually isn't the most effective type of power. First, it's likely to create a negative communication climate, because nobody likes to be threatened. Second, it can produce what has been called
a "boomerang effect" in which a member who is threatened with punishment resists by doing exactly what the other members don't want. Third, coercion alone may tell others what not to do, but it doesn't tell them what you do want them to do. Telling an unproductive member, "If you can't contribute useful information, we'll kick you out of the group"
doesn't offer much advice about what would count as "useful information." Social scientists say that coercion has the best chance of success when it involves denial of an expected reward rather than the imposition of a negative consequence. 25 For example, canceling an upcoming vacation of a working group who doesn't meet its deadline is better
than reducing employees' salaries. Even under circumstances like this, however, coercion alone is not as effective as the next kind of power, which involves rewards come in a variety of forms. The most obvious are material
reinforcers:money,awards,and so on. Other rewards can be a powerful motivator. Even spending time with people you like can be reinforcing. Rewards don't come only from the official leader of a group. The goodwill of other members can sometimes be even more valuable. In a class group, for
example, having your fellow students think highly of you might be a more powerful reward than the grade you could receive from the instructor. In fact, subordinates sometimes can reward nominal leaders just as much as the other way around. A boss might work hard to accommodate employees in order to keep them happy, for example. SOLVING
PROBLEMS IN GROUPS 309 288-323 Ch09 Adler 310 3/1/05 PART THREE 8:00 AM Page 310 COMMUNICATION IN GROUPS EXPERT POWER Expert power exists when we are influenced by people because of what we believe they know or can do. For example, when a medical emergency occurs, most group members would gladly let a doctor,
nurse, or paramedic make decisions because of that person's obvious knowledge. In groups it isn't sufficient to be an expert: The other members have to view you as one. This means that it is important to make your qualifications known if you want others to give your opinions extra weight. INFORMATION POWER As its name implies, information
power comes from a member's knowledge that he or she can help the group reach its goal. Not all useful information comes from experts with special credentials. For instance, a fundraising group seeking donations from local businesses might profit from the knowledge that one member has about which merchants are hospitable to the group's cause
Likewise, a class group working on a term project might benefit from the knowledge of one student who had taken other classes from the instructor who will be grading their work. REFERENT POWER Referent power, you may be able to persuade
others to follow your lead because they believe in you or because they are willing to do you a favor. Members acquire referent power by behaving in ways others in the group admire and by being genuinely likable. The kinds of confirming to
others' ideas, honoring their contributions, and taking a win-win approach to meeting their needs lead to liking and respect. After our look at various ways members can influence one another, three important characteristics of power in groups become clearer. 26 

Power Is Group-Centered. Power isn't something an individual possesses. Instead
it is conferred by the group. You may be an expert on the subject being considered, but if the other members don't think you are qualified to talk, you won't have expert power. You might try to reward other people by praising their contributions; but if they don't value your compliments, then all the praise in the world won't influence them. Power Is
Distributed among Group Members. Power rarely belongs to just one person. Even when a group has an official leader, other members usually have the power to affect what happens. This influence can be positive, coming from information, expertise, or social reinforcement. It can also be negative, coming from punishing behaviors such as criticizing
or withholding the contributions that the group needs to succeed. You can appreciate how power is distributed among members by considering the effect just one member can have by not showing up for meetings or failing to carry out his or her part of the job. Power Isn't an Either-Or Concept. It's incorrect to assume that power is an either-or
have just examined. 288-323_Ch09_Adler 3/1/05 8:00 AM Page 311 CHAPTER 9 TABLE 9-3 SOLVING PROBLEMS IN GROUPS Methods for Acquiring Power is a comfortable and legitimate role to play. But when you do seek power, the following methods outline
specific ways to shape the way others behave and the decisions they make. Legitimate Authority 1. Become an authority figure. If possible, get yourself appointed or elected to a position of leadership. Do so by following Steps 2-5. 2. Speak up without dominating others. Power comes from visibility, but don't antagonize others by shutting them out. 3.
Demonstrate competence on the subject. Enhance legitimate authority by demonstrating information and expertise power. 4. Follow group norms. Show that you respect the group's customs. 5. Gain support of other members. Information Power 1
Provide useful but scarce or restricted information. Show others that you possess information that isn't available elsewhere. 2. Be certain the information is accurate. One piece of mistaken information that isn't available elsewhere. 2. Be certain the information is accurate. One piece of mistaken information that isn't available elsewhere. 2. Be certain the information is accurate. One piece of mistaken information that isn't available elsewhere. 2. Be certain the information is accurate. One piece of mistaken information is accurate to the piece of mis
members are aware of your qualifications. Let others know that you have expertise in the area being discussed. 2. Don't act superior. You will squander your expertise makes you superior to others. Use your knowledge for the good of the group, not ego building. Reward and Coercive Power 1. Try to use rewards as a first
resort and punishment as a last resort. People respond better to pleasant consequences than unpleasant ones, so take a positive approach first. 2. Make rewards and punishments clear in advance. Let others know that you recognize their
desirable behavior. Referent Power 1. Enhance your attractiveness to group members. Do whatever you can to gain the liking and respect of other members without compromising your principles. 2. Company: Small Group Communication, 3rd ed. (Fort Worth, TX: Harcourt Brace, 1998), pp. 252-272. Reprinted with permission of Wadsworth, an imprint of the Wadsworth Group, a division of Thomson Learning. Fax 800-730-2215. What Makes Leaders Effective? Even though power is distributed among members of a group, it is still important to
explore the special role played by the nominal leader. In the next few pages we will describe the communication-related factors that contribute to leader effectiveness. 311 288-323 Ch09 Adler 312 3/1/05 PART THREE Page 312 COMMUNICATION IN GROUPS A leader is best When people barely know that he exists, Not so good when people obey
and acclaim him, Worse when they despise him. "Fail to honor people, They fail to honor you"; But of a good leader who talks little, When his work is done, his aim fulfilled, They will say, "We did it ourselves." Lao-tzu 8:00 AM TRAIT ANALYSIS Over two thousand years ago, Aristotle proclaimed, "From the hour of their birth some are marked out for
mixed.Yet, as Table 9-4 shows, a number of distinguishing characteristics did emerge in several categories involved social skills. For example, leaders also possess goal-related skills that help groups
perform their tasks. They are somewhat more intelligent, possess more task-relevant information, and are more dependable than other members. Just as important, leaders want the role and act in ways that will help them achieve it. Finally, physical appearance seems to play a role in leadership. As a rule, leaders tend to be slightly taller, heavier, and
 physically more attractive than other members. They also seem to possess greater athletic ability and stamina. Despite these general findings, trait theories have limited practical value. Later research has shown that many other factors are important in determining leader success and that not everyone who possesses these traits becomes a leader
Organizational researchers Warren Bennis and Burt Nanus interviewed ninety American leaders, including Ray Kroc, the founder of McDonald's; professional football coach John Robinson; and John H. Johnson, publisher of Ebony. Their analysis led to the conclusion that the principle "leaders must be charismatic" is a myth. Some are, most aren't.
Among the ninety there were a few—but damned few—who probably correspond to our fantasies of some "divine inspiration," that "grace under stress" we associated with J.F.K. or the beguiling capacity to spellbind for which we remember Churchill. Our leaders were all "too human"; they were short and tall, articulate and inarticulate, dressed for
success and dressed for failure, and there was virtually nothing in terms of physical appearance, personality, or style that set them apart from their followers. Our guess is that it operates in the other way around, and that those who are good at it are granted a certain
amount of respect and even awe by their followers, which increases the bond of attraction between them.29 LEADERSHIP STYLE As researchers began to look in other areas. Some scholars theorized that good leadership is a matter of communication style—the way leaders deal
with members. Three basic approaches were identified. The first approach was an authoritarian leadership style, which invited other members to share in decision making. The third approach was the laissez-faire leadership leadership style, which invited other members to share in decision making. The third approach was the laissez-faire leadership style, which invited other members to share in decision making. The third approach was an authoritarian leadership style, which invited other members to share in decision making. The third approach was an authoritarian leadership style that relied on legitimate, coercive, and reward power to influence others. The second approach was an authoritarian leadership style that relied on legitimate, coercive, and reward power to influence others.
style, in which the leader gave up the power to dictate, transforming the group into a leaderless collection of equals. Early research showed that matters weren't so simple.31 For instance, groups with autocratic leaders proved more productive under
stressful conditions, but democratically led groups did better when the situation was nonstressful.32 288-323_Ch09_Adler 3/1/05 8:00 AM Page 313 CHAPTER 9 TABLE 9-4 Factor No. SOLVING PROBLEMS IN GROUPS 313 Some Traits Associated with Leaders Factors Appearing in Three or More Studies Frequency 1 Social and interpersonal skills

GROUPS Research showed that there is some merit to the styles approach. One extensive study of more than twelve thousand managers showed that a democratic approach to leadership correlated highly with success. Effective managers showed that a democratic approach to leadership correlated highly with success.
authoritarian and less concerned with the welfare or ideas of the people who reported to them.33 Despite this fact, a democratic approach isn't always the best one. For example, an autocratic approach isn't always the best one essential in situations where time is of the essence. Some researchers have focused on leadership
style from a different perspective. Robert R. Blake and Jane S. Mouton developed an approach based on the relationship between the designated leader's concern with the task and with the relationship between the designated leader's concern with the task and with the relationship between the designated leader's concern with the task and with the relationship between the designated leader's concern with the relationship between the relationship betwe

Share ideas and facilitate in decision making NG LI SITUATIONAL APPROACHES Most contemporary scholars are convinced that the best style of leadership varies from one set of circumstances to another.35 In an effort to pin down which approach works best in a given type of situation, psychologist Fred Fiedler attempted to find out when a
taskoriented approach was most effective and when a more relationship-oriented approach was most effective and when a more relationship-oriented approach was most effective and when a more relationship-oriented approach was most effective. 36 From his research, Fiedler developed a situational leadership is that a leader's style should change with the
circumstances. A task-oriented approach works best when conditions are either highly favorable (good leader-member relations, strong leader power, and an ambiguous task), whereas a more relationshiporiented approach is appropriate in moderately
favorable or moderately unfavorable conditions. More recently, Paul Hersey and Kenneth Blanchard have suggested that a leader's focus on task or relational issues should vary according to the readiness of the group being led (see Figure 9-3).37 Readiness involves the members' level of motivation, willingness to take responsibility, and the amount of
knowledge and experience they have in a given situation. For example, a new, inexperienced group would need more task-related direction, whereas a more experienced group might require more social support and less instruction about how to do the job. A wellseasoned group could probably handle the job well without much supervision at all.
Because an employee's readiness changes from one job to another, Hersey and Blanchard suggest that the best way to lead should vary as well. 315 SOLVING PROBLEMS IN GROUPS Provide specific instructions and closely supervise performance HIGH TASK BEHAVIOR GUIDANCE FOLLOWER READINESS HIGH R4 R3 R2 R1 Able and willing or

decisions. At other times, they make decisions that later prove to be wrong. Though there's no foolproof method of guaranteeing high-quality group work, there are several dangers to avoid. Information underload and Overload Information underload occurs when a group lacks information necessary to operate effectively. Sometimes the underload
results from overlooking parts of a problem. We know of one group who scheduled a fund-raising auction without considering what other events might attract potential donors. They later found that their event was scheduled a fund-raising auction without considering what other events might attract potential donors. They later found that their event was scheduled a fund-raising auction without considering what other events might attract potential donors. because they simply don't conduct enough research. For example, a group of partners starting a new business has to be aware of all the startup costs to avoid going bankrupt in the first months of operation. Overlooking one or two important items can make the difference between success and failure. Sometimes groups can suffer from too much
information. Information overload occurs when the rate or complexity of material is too great to manage. Having an abundance of information might seem like a blessing, but anyone who has tried to do conscientious library research has become aware of the paralysis that can result from being overwhelmed by an avalanche of books, magazine and
newspaper articles, reviews, films, and research studies. When too much information exists, it is hard to sort out the essential information overload. 38 First, specialize whenever possible. Try to parcel out areas of responsibility to each member instead of
expecting each member to explore every angle of the topic. Second, be selective: Take a quick look at each piece of information to see whether it has real value for your task. If it doesn't, move on to examine more promising material. Third, limit your search. Information specialists have discovered that there is often a curvilinear relationship between
the amount of information a group possesses and the quality of its decisions. Unequal Participation The value of involving group members in making decisions—especially decisions that affect them—is great.39 When people
participate, their loyalty to the group increases. (Your own experience will probably show that most group dropouts were quiet and withdrawn.) Broad-based participation has a second advantage: It increases the amount of resources focused on the problem. As a result, the quality of the group's decisions goes up. Finally, participation increases
members' loyalty to the decisions that they played a part in making. The key to effective participation is balance. Domination by a few vocal members can reduce a group's ability to solve a problem effectively. Research shows that the proposal receiving the largest number of favorable comments is usually the one chosen even if it isn't the best one.40
Furthermore, ideas of highstatus members (who aren't always talkers) are given more consideration than 288-323 Ch09 Adler 3/1/05 8:00 AM Page 317 CHAPTER 9 those of lower-status members.41 The moral to this story? Don't assume that quantity of speech or the status of the speaker automatically defines the quality of an idea: Instead, seek out
and seriously consider the ideas of quieter members. Not all participation is helpful, of course. It's better to remain quiet than to act out the kind of dysfunctional roles described in Chapter 8—cynic, aggressor, dominator, and so on. Likewise, the comments of a member who is uninformed can waste time. Finally, downright ignorant or mistaken input
can distract a group. You can encourage the useful contributions of quiet members in a variety of ways. First, keep the group small. In groups with three or four members, participation is roughly equal; but after size increases to between five and eight, there is a dramatic gap between the contributions of members. 42 Even in a large group you can
a quiet person's brilliant remark, but a word of thanks and an acknowledgment of the value of an idea increase the odds that the contributor will speak up again in the future. A third strategy is to assign specific tasks to normally quiet members. The need to report on these tasks guarantees that they will speak up. A fourth strategy is to use the
nominal group technique, described in Chapter 8, to guarantee that the ideas of all members are heard. Different strategies can help when their remarks aren't helpful. If the talkative member is at all sensitive, withholding reinforcement can deliver a diplomatic hint that it may
be time to listen more and speak less. A lack of response to an idea or suggestion can work as a hint to cut back on speaking. Don't confuse lack of reinforcement with punishment, however: Attacking a member doesn't respond to
subtle hints, politely expressing a desire to hear from other members can be effective. The next stage in this series of escalating strategies for dealing with dominating members is to question the relevancy of remarks that are apparently off the wall: "I'm confused about what last Saturday's party has to do with the job we have to do today. Am I missing
something?" ETHICAL CHALLENGE DEALING WITH OVERLY TALKATIVE AND QUIET GROUP MEMBERS SOLVING PROBLEMS IN GROUPS 317 CULTURAL IDIOM to go overboard: to do so much as to be excessive gushing about: being overly enthusiastic Balancing participation in group discussions can involve stifling some members and urging
others to speak up when they would prefer to be silent. Explore the ethical justification for these actions by answering the following questions. 1. Are there any circumstances when it is legitimate to place quiet group members in the position of speaking up when they would rather remain quiet? When does it become unreasonable to urge quiet
members to participate? 2. Does discouraging talkative member's contributions. After developing your ethical guidelines, consider how willing you would feel if they were applied to you. 318 3/1/05 PART THREE
8:00 AM COMMUNICATION IN GROUPS CULTURAL IDIOM off the wall: unconventional, ridiculous go along with the majority rock the boat: disturb a stable condition Conformity: Long and Short Views When we look a little closer, we see an inconsistency in the way our society seems to feel about
conformity (team playing) and nonconformity (deviance). For example, one of the great best-sellers of the 1950s was a book by John F. Kennedy called Profiles in Courage, wherein the author praised several politicians for their courage in resisting great pressure and refusing to conform. To put it another way, Kennedy was praising people who
refused to be good team players, people who refused to vote or act as their parties or constituents expected them to. Although their actions of their colleagues were generally far from positive. The nonconformist may be praised by historians or idolized in films or
literature long after the fact of his nonconformity, but he's usually not held in high esteem, at the time, by those demands he refuses to conform. Elliot Aronson The Social Animal Page 318 Pressure to Conform There's a strong tendency for group members to go along with the crowd, which often results in bad decisions. A classic
study by Solomon Asch illustrated this point. College students were shown three lines of different lengths and asked to identify which of them matched with a fourth line. Although the correct answer was obvious, the experiment was a setup: Asch had instructed all but one member of the experimental groups to vote for the wrong line. As a result, fully
one-third of the uninformed subjects ignored their own good judgment and voted with the majority. If simple tasks like this one generate such conformity, it is easy to see that following the (sometimes mistaken) crowd is even more likely in the much more complex and ambiguous tasks that most groups face. Even when there's no overt pressure to
follow the majority, more subtle influences motivate members—especially in highly cohesive groups—to keep quiet rather than voice any thoughts that deviate from what appears to be the consensus. "Why rock the boat if I'm the only dissenter?" members think. "And if everybody else feels the same way, they're probably right." With no dissent, the
group begins to take on a feeling of invulnerability: an unquestioning belief that its ideas are correct and even morally right. As its position solidifies, outsiders who disagree can be viewed as the enemy, disloyal to what is obviously the only legitimate viewpoint. Social scientists use the term groupthink to describe a group's collective striving for
unanimity that discourages realistic appraisals of alternatives to its chosen decision.43 Several group practices can discourage this troublesome force.44 A first step is to recognize the prob- Source: THEFARSIDE © 1984 FARWORKS, INC. of power that come with the position to intimidate members. A third step involves developing a group norm that legitimizes disagreement. After members recognize that questioning one another's positions. Sometimes it can be helpful to
designate a person or subgroup as "devil's advocate" who reminds the others about the dangers of groupthink and challenges the trend toward consensus. SOLVING PROBLEMS IN GROUPS 319 CULTURAL IDIOM "devil's advocate" to clarify issues SUMMARY Despite the bad reputation of groups
greater commitment from members. Groups aren't always the best forum for solving problems. They should be used when the problem is beyond the capacity of one person to solve, when tasks are interdependent, when there is more than one desired solution or decision, and when the agreement of all members is essential. Groups use a wide variety
of discussion formats when solving problems. Some use parliamentary procedures of the group. Since face-to-face meetings can be time-consuming and difficult to arrange
computer-mediated communication can be a good alternative for some group tasks. Some groupwork can be handled via asychronous discussions, in which members exchange messages at their convenience. Mediated
meetings provide a record of discussion and they can make it easier for normally quiet members to partici- pate, but they can take more time and they lack the nonverbal richness of face-to-face conversation. Given the pros and cons of mediated meetings, smart communicators should give thoughtful consideration about when to use this approach
Groups stand the best chance of developing effective solutions to problem, including the mistake of failing to recognize the hidden needs of individual members. Their next step is to analyze the problem, including identification of forces both favoring and blocking progress. Only at this point should
the group begin to develop possible solutions, taking care not to stifle creativity by evaluating any of them prematurely. During the implementation phase of the solution, the group should monitor the situation carefully and make any necessary changes in its plan. Most groups can expect to move through several stages as they solve a problem. The first
of these stages is orientation, during which the members sound each other out. The conflict stage is characterized by partisanship and open debate over the merits of contending ideas. In the emergence stage, the group's decision. Groups who pay
attention only to the task dimension of their interaction risk strains in the relationships among members. Many of these interpersonal problems can be avoided by using the skills described in Chapter 7 as well as by following the guidelines in 288-323 Ch09 Adler 320 3/1/05 PART THREE 8:00 AM Page 320 COMMUNICATION IN GROUPS this
chapter for building group cohesiveness and encouraging participation. Many naive observers of groups confuse the concepts of leader and leadership. We defined leadership as the ability to influence the behavior of other memb e r s t h r o u g h t h e u s e o f o n e o r m o re t y p e s o f power—legitimate, coercive, reward, expert, information, or
referent. We saw that many nominal leaders share their power with other members. Leadership has been examined from many perspectives—trait analysis, leadership style, and situational variables. Smart members will avoid some common dangers that threaten a group's effectiveness. They will make sure to get the information they need, without
succumbing to overload. They will make sure that participation is equal by encouraging the contributions of quiet members and keeping more talkative people on track. They will guard against groupthink by minimizing pressure on members and keeping more talkative people on track. They will make sure that participation is equal by encouraging the contributions of quiet members and keeping more talkative people on track. trait theories of leadership 312 ACTIVITIES 1. When to Use Group Problem Solving Explain which of the following tasks would best be managed by a group: 1. Collecting and editing a list of films illustrating communication principles. 2. Deciding what the group will eat for lunch at a one-day meeting. 3. Choosing the topic for a class project. 4.
Finding which of six companies had the lowest auto insurance rates. 5. Designing a survey to measure community attitudes toward a subsidy for local artists. 2. Increasing Group Creativity in group discussions by trying the approaches described in Understanding Human Communication. Your group
should begin by choosing one of the following problems: 1. How can out-of-pocket student expenses (e.g., books, transportation) be decreased? 2. How can the textbook you are using in this (or any other) class be improved? 3. How could your class group (legally) earn the greatest amount of money between now and the end of the term? 4. What
strategies can be used effectively when confronted with employer discrimination or harassment? (Assume you want to keep the job.) 5. Imagine that your group has been hired to develop a way of improving the course registration system at your institution. What three recommendations will be most effective? Choose either brainstorming or the
nominal group technique to develop possible solutions to your chosen problem. Explain why you chose the method. Under what conditions would the other method be more appropriate? 3. Stages in Group Development Identify a problem-solving group, either from your personal experience or from a book or film. Analyze the group's approach to
problem solving. Does it follow the cyclical model pictured in Figure 9-1? Does it follow a more linear approach? Or does the group follow no recognizable pattern at all? 288-323 Ch09 Adler 3/1/05 8:00 AM Page 321 CHAPTER 9 4. Power in Groups 1. Think of examples from groups you have belonged to or observed in which members had and used
each type of power: Legitimate Coercive Reward Expert Information Referent SOLVING PROBLEMS IN GROUPS 321 Cochran, Alice. Roberta's Rules of Order has served for over 125 years as a guide for using parliamentary procedure to bring order out of meetings that might otherwise be
disorganized, and even chaotic. Cochran has created a less formal approach too confining, this book may be a useful guide. 2. Describe the types of power you have possessed in groups. Evaluate whether your use of that power has helped or hindered the
group's effectiveness. Gouran, Dennis S. "Communication Skills, J. O. Greene and G. R. Burleson, eds. Mahwah, NJ: Erlbaum, 2003. 5. Choosing the Most Effective Leadership Style Think of two effective leaders you have known. How would you describe the style
of each one: autocratic, democratic, democratic, or laissez-faire? Task- or relationship-oriented? Imagine that the two leaders were transferred, so that each one was directing the other's group. Would the same style work equally well in each situation? Why or why not? This summar y by a leading scholar provides a research-based review of both task-related and
relational skills that contribute to effective group problem solving, see the CD-ROM that came with this book, and the Understanding Human Communication Web site at www.oup.com/us/uhc. Adler, Ronald B., and Jeanne M. Elmhorst.
Communicating at Work: Principles and Practices for Business and the Professions, 8th ed. New York: McGraw-Hill, 2005. Chapter 9 offers a variety of tips on how to encourage balanced participation and keep discussion on track, and how
to maintain a positive tone, even when members disagree. Rothwell, J. Dan. In Mixed Company: Small Group Communication, 5th ed. Belmont, CA:Wadsworth, 2004. This survey of small group communication to how gender and culture affect
group work and discusses the features that distinguish effective teams. Surowiecki, James. The Wisdom of Crowds. New York: Doubleday, 2004. This readable book explores a deceptively simple idea that has profound implications: groups of people make better decisions than an elite few, no matter how brilliant. 288-323 Ch09 Adler 322 3/1/05 PART
THREE 8:00 AM Page 322 COMMUNICATION IN GROUPS Feature Films For descriptions of each film below and descriptions of other movies that illustrate group problem solving, see the CD-ROM that came with this book, and the Understanding Human Communication Web site at www.oup.com/us/uhc. must come up with a plan that deters the
Soviets from completing the installation of missiles in Cuba without triggering a nuclear war. The intense deliberations offer a window into high-stakes decision making that illustrates the importance of using the input of talented group members to develop an effective solution. The Importance of Problem-Solving Skills Apollo 13 (1995). Rated PG. O
Brother Where Art Thou? (2000). Rated PG-13. This is the gripping story of how teamwork and courage saved the lives of three astronauts—Jim Lovell, Fred Haise, and Jack Swigert—were faced with the possibility of
becoming marooned in space where the options were all grim: running out of oxygen, being poisoned by carbon dioxide, or freezing to death. The film chronicles how the engineers on the ground worked with the astronauts to devise a solution to this deadly challenge. The story shows how a dedicated team can work harmoniously to triumph over even
apparently impossible challenges. Loosely based on Homer's Odyssey, this comedy follows three convicts who have escaped from a Depression-era chain gang. As reviewers have noted, this group has a plan but not a clue about how to work together. Their problem-solving skills are rudimentary at best, and their bumbling provides an entertaining
contrast to the skills in this chapter. Creative Problem Solving Thirteen Days (2000). Rated PG-13. This film chronicles the 1962 nuclear showdown between the United States and the Soviet Union. President John F. Kennedy and his team of advisors 288-323 CH09 Adler 3/1/05 8:00 AM Page 323 CHAPTER 9 SOLVING PROBLEMS IN GROUPS Kidco
(1983). Rated G. Leadership This is the story of a group of children, ages nine to sixteen, who triumph over the chores of cleaning out horse stables by creating the largest pest control and fertilizer service in San Diego County. State bureaucrats get wind of their scheme and attempt to shut the company down. The film—based on actual events—
illustrates how a creative group can devise win-win solutions in an apparently win-lose or lose-lose situation. Chicken Run (2000). Rated G. Twelve Angry Men (1957/1997). Not rated. A young ghetto-dwelling boy has been accused of stabbing his father to death. A jury deliberates his fate. At first only one juror (Henry Fonda/Jack Lemmon) votes for
acquittal, but during the course of deliberations the opinion slowly shifts as the group reviews testimony from the trial. The film is an outstanding example of both the potential weaknesses and strengths of group problem solving; in keeping with the theme, this film is an exercise in ensemble acting rather than a showcase for a single performer. 323
The inhabitants of a prison-like British chicken farm are complacent in the face of impending extermination until inmate Ginger (voice of Julia Sawalha) and flying rooster Rocky (voice of Mel Gibson) develop an escape plan. The chickens in this clever animated film exemplify the trait theory of leadership, illustrating how key members can help a
group face long odds to solve daunting challenges. Rocky and Ginger show the value of spirit and energy in the face of adversity. PART FOUR 324-351 Ch10 Adler 2/28/05 9:54 AM Page 324 CASE STUDY You may be surprised to learn that most colleges and universities go to great lengths to market themselves to prospective students. Some schools
spend hundreds of thousands of dollars each year on promotion. Public and private, large and small, elite and less selective...virtually every school market themselves for a variety of reasons. More favorable name recognition can attract brighter students, as well as those SPEAKER'S BUREAU from a more diverse range of
backgrounds. Higher visibility also helps schools recruit top faculty — and inspires confidence from prospective donors. Your school, as part of its marketing campaign, has asked your community and beyond with the idea of
attracting more students, increasing awareness and favorable opin- ions about the school and its students. You welcome a better place. And by helping to
develop a top-notch speaker's bureau, you can show prospective employers that you have the kind of communication to respond to the following as you plan your college's marketing campaign. CHAPTER 10 CHAPTER 11
CHAPTER 12 1. What audiences will you target for presentations? 1. Create an outline for one of the presentations you identified while answering question for Chapter 10 above, what type of delivery (see pages 391-394) would be most effective for your presentation? 2. What will
be your specific purpose for each audience? 3. What thesis will each presentation have? 4. How will the situational factors listed on pages 333-339 shape how you design and present each message? 5. What kinds of speakers (e.g., students, professors, administrators, community members) would be best suited for each audience? 6. What methods of
gathering information will you use to make each presentation effective? 2. Describe one piece of supporting material you can use for each main point in the presentation more interesting, memorable, clear, and persuasive. 3. Describe any visual aids you could use in the speech you are designing, and explain how it will make the presentation more interesting.
how you can use the guidelines in Chapter 11 to make them most effective. 4. What are two different techniques you could use to capture attention? 2. Imagine that you might have that would lead to stage fright and explain
how you could use the techniques on pages 390-391 to overcome them. 3. How can you use the visual and vocal aspects of delivery described on pages 395-399 to make your delivery most effective? 324-351 Ch10 Adler 2/28/05 9:54 AM Page 325 CHAPTER 14 1. Describe how you can use the techniques of informative speaking listed on pages 409-
417 to improve the effectiveness of one of the presentations you identified while answering questions for Chapter 10. Answer the following questions for Chapter 10. What type of proposition, outcome, and approach are
you using in this speech? (See pages 432-436 to answer.) 2. What can you say to establish common ground with your audience? What techniques can you boost your credibility with your audience? What techniques can you boost your presentation most
effective and ethical by adhering to the characteristics on pages 445-446? PUBLIC COMMUNICATION CHAPTER 13 324-351 Ch10 Adler 2/28/05 9:54 AM Page 326 AFTER STUDYING THE MATERIAL IN THIS CHAPTER . . . You should understand: 1. The importance of defining a clear speech purpose. 2. The differences among a general purpose, a
specific purpose, and a thesis. 3. The necessity of analyzing a speaking situation. You should be able to: 1. Choose an effective speaking topic. 2. Formulate a purpose statement and thesis statement that will help you develop that topic. 3. Analyze both the audience and occasion in any speaking situation. 4. Gather information on your chosen topic
from a variety of sources. 324-351 Ch10 Adler 2/28/05 9:54 AM Page 327 CHAPTER HIGHLIGHTS Your choice of topic will be one of the most important decisions you make in preparing your speech. Consider two quidelines: Look for a topic early.
should understand and be able to state the following simply and clearly: Your general purpose (to entertain, to inform, or to persuade). Vour general purpose (expressed in the form of a purpose statement).
situation. Analyzing the audience enables you to adapt your speech to your listeners. Analyzing the occasion enables you to customize your speech to its circumstances as a unique event. Analyzing the occasion enables you to customize your speech to its circumstances as a unique event.
Personal observation Survey research CHAPTER TEN Choosing and Developing a Topic 324-351 Ch10 Adler 328 2/28/05 PART FOUR 9:54 AM Page 328 PUBLIC COMMUNICATION CULTURAL IDIOM the toast: the speech given before a drink to honor someone A surprising number of people will give speeches that will change their lives. Some office a drink to honor someone A surprising number of people will give speeches that will change their lives.
these will be job-related speeches, like the presentation that gets your new company funded or wins you a promotion. Some will have the potential to change the world, perhaps locally, as you get a civic improvement project started in your
hometown, or even globally, when you try to persuade listeners to deal more effectively with global problems like hunger, disease, or environmental threats. You may also recognize that successful public speaking can be a liberating,
transforming experience that boosts your selfconfidence and helps you make a difference in the world. Yet most of us view the prospect of standing before an audience with the same enthusiasm we have for a trip to the dentist or the tax auditor. In fact, giving a speech seems to be one of the most anxiety-producing things we can do: The Book of Lists
claims that Americans fear public speaking more than they do insects, heights, accidents, and even death. 1 Despite the discomfort that speech giving a class report, as part of a job, or as part of a community action group. And even in less "speechlike"
```

```
situations, you will often need the same skills that are important in speech giving: the ability to talk with confidence, to organize ideas in a clear way, and to make those ideas interesting and persuasive. Attaining a mastery of public speaking is at least partially a matter of practice. But practice doesn't always make perfect; without a careful analysis
of what you are doing, practice has a tendency to make old public speaking habits permanent rather than perfect. The remaining chapters of this book will provide you with tools to analyze and improve your performance as a public speaking can be a horror for the shy person, but it can also be the ultimate act of liberation. . . . I hadn'
realized the transformative effect it could have on the speaker herself. Susan Faludi Source: Reprinted with permission from John Callahan/Levin Represents. 324-351_Ch10_Adler 2/28/05 9:54 AM Page 329 CHAPTER 10 CHOOSING A TOPIC 329 CHOOSING A TOPIC Often the difference between a successful and an unsuccessful
speech is the choice of topic. Your topic should be familiar enough for your audience to understand, yet be innovative enough to hold its attention. This chapter will help you pick a topic that is right for you, your audience, and your assignment.
Look for a Topic Early The best student speakers usually choose a topic as soon as possible after a speech is assigned by their instructor, and then they stick with it. One reason to look for a topic early is so that you will have plenty of time to complete the speech and practice it. Adequate practice time is essential to effective speech making, but the
reasons for choosing a topic early run even deeper than that. Ideas seem to come automatically to speakers who have a topic in mind; things they read or observe or talk about that might have otherwise been meaningless suddenly relate to their topic, providing material or inspiration. The earlier you decide on a topic, the more you can take advantage
of these happy coincidences. Choose a Topic That Interests You Your topic must be interesting to you. Your addience, and the best way to accomplish that is to find a topic that is interesting to you. Your interest in a topic will also improve your ability to create the speech, and it will increase your confidence when it comes time to present it. Sometimes it's
newspapers magazines books related Web sites DISCUSS CURRENT EVENTS 🔳 🔳 activities hobbies special interests personal experience After you choose your topic, you can begin
developing it. Your first step in that task is defining your purpose. DEFINING PURPOSE No one gives a speech—or expresses any kind of message—without having a reason to do so. This is easy to see in those messages that ask for something: "Pass the salt" or "How about a movie this Friday?" or "Excuse me, that's my foot you're standing on." But even
in subtler messages, the speaker always has a purpose: to evoke a response from the listener. CULTURAL IDIOM stick with: continue with being pressed: forced 324-351 Ch10 Adler 330 2/28/05 PART FOUR 9:54 AM Page 330 PUBLIC COMMUNICATION CULTURAL IDIOM boil down to: reduce to the basic elements Sometimes purposes are
misunderstood or confused by the speaker. This causes wasted time both in the preparation and in the preparation and in the preparation and in the preparation of that purpose. This requires an understanding the purpose. This requires an understanding of both in the preparation and in the preparati
general purpose and specific purpose. General Purpose Most students, when asked why they are giving a speech in a college class, will quickly cite course requirements. But you have to analyze your motives more deeply than that to develop an effective speech purpose. Even if you are giving your speech only for the grade, you still have to affect your
audience in some way to earn that grade. If your motive for speaking is to learn effective speech techniques (as we hope it is), you still have to influence your audience, we mean you have to change the audience in some way.
If you think about all the possible ways you could change an audience, you'll realize that they all boil down to three options, which happen to be the three basic general purposes for speaking. 1. To entertain. To relax your audience by providing it with a pleasant listening experience 2. To inform. To enlighten your audience by teaching it something 3
To persuade. To move your audience toward a new attitude or behavior A brief scrutiny of these purposes will reveal that no speech designed for one purpose will almost always accomplish a little of the other purposes; even a speech designed purely to entertain
might change audience attitudes or teach that audience something new. In fact, these purposes are cumulative in the sense that, to inform an audience, you have to make your remarks entertaining enough to convince it that your topic is worth learning about. And you certainly have to inform an audience (about
your arguments) in order to persuade it. Deciding your general purpose is like choosing the "right" answer on one of those multiple choice tests in which all the answers are right to a certain degree, but one answer is more right than the others. Thus, we say that any speech is primarily designed for one of these purposes. A clear understanding of your
general purpose gets you on the right track for choosing and developing a topic. Understanding your specific purpose will keep you on that track. Specific purpose is constancy of purpose is expressed in the form of a purpose
statement—a complete sentence that describes exactly what you want your speech to accomplish. The purpose is to keep you focused as you plan your speech to accomplish. The purpose is to keep you focused as you plan your speech to accomplish. The purpose is to keep you focused as you plan your speech to accomplish. The purpose is to keep you focused as you plan your speech to accomplish. The purpose is to keep you focused as you plan your speech to accomplish. The purpose is to keep you focused as you plan your speech to accomplish. The purpose is to keep you focused as you plan your speech to accomplish. The purpose is to keep you focused as you plan your speech to accomplish. The purpose is to keep you focused as you plan your speech to accomplish. The purpose is to keep you focused as you plan your speech to accomplish. The purpose is to keep you focused as you plan your speech to accomplish. The purpose is to keep you focused as you plan your speech to accomplish. The purpose is to keep you focused as you plan your speech to accomplish. The purpose is to keep you focused as you plan your speech to accomplish. The purpose is to keep you focused as you plan your speech to accomplish. The purpose is to keep you focused as you plan your speech to accomplish. The purpose is to keep you focused as you plan your speech to accomplish. The purpose is to keep you focused as you plan your speech to accomplish. The purpose is to keep you focused as you plan your speech to accomplish.
three criteria for a good purpose statement. 1. A Purpose Statement Should Be Receiver Oriented. Having a receiver orientation means that your speech will affect your audience members. For example, if you were giving an informative talk on how to sue someone in small claims court, this would be an inadequate
purpose statement: My purpose is to tell my audience about small claims court. As that statement is worded, your purpose is "to tell" an audience something, which suggests that the speech could be successful even if no one listens. Your purpose is "to tell my audience something, which suggests that the speech could be successful even if no one listens. Your purpose is "to tell my audience something, which suggests that the speech could be successful even if no one listens. Your purpose is "to tell my audience something, which suggests that the speech could be successful even if no one listens. Your purpose is "to tell my audience something, which suggests that the speech could be successful even if no one listens. Your purpose is "to tell my audience something, which suggests that the speech could be successful even if no one listens. Your purpose is "to tell my audience something," which suggests that the speech could be successful even if no one listens. Your purpose is "to tell my audience something," which suggests that the speech could be successful even if no one listens. Your purpose is "to tell my audience something," which suggests that the speech could be successful even if no one listens. Your purpose is "to tell my audience something," which suggests that the speech could be successful even if no one listens. Your purpose is the speech could be successful even if no one listens are the speech could be successful even if no one listens are the speech could be successful even if no one listens are the speech could be successful even if no one listens are the speech could be successful even if no one listens are the speech could be successful even if no one listens are the speech could be successful even if no one listens are the speech could be successful even if no one listens are the speech could be successful even if no one listens are the speech could be successful even if no one listens are the speech could be successful even if no one listens are the speech could be successful even if no one lis
members will know or be able to do after listening to your speech. Thus, the preceding purpose statement could be improved in this way: After listening to my speech, my audience will know more about small claims court procedures. That's an improvement, because you now have stated what you expect from your audience will know more about small claims court procedures.
could be improved more through the judicious application of a second criterion: 2. A Purpose Statement Should be worded specifically, with enough details so that you would be able to measure or test your audience, after your speech, to see if you had achieved your purpose. In the example
given earlier, simply "knowing about small claims court" is too vague; you need something more specific, such as: After listening to my speech, my audience will know how to win a case in small claims court. This is an improvement, but it can be made still better by applying a third criterion: 3. A Purpose Statement Should Be Realistic. You must be
able to accomplish your purpose as stated. Some speakers insist on formulating purpose statements such as, "My purpose is to convince my audience to make federal budget deficits illegal." Unfortunately, unless your audience to make federal budget deficits illegal." Unfortunately, unless your audience to make federal budget deficits illegal." Unfortunately, unless your audience to make federal budget deficits illegal." Unfortunately, unless your audience to make federal budget deficits illegal." Unfortunately, unless your audience to make federal budget deficits illegal."
congressional representatives or sign a petition. Similarly, an audience will not "learn how to play championship tennis" or "understand the danger of business regulation" in one sitting. You must aim for an audience response that is possible to accomplish. In your small claims court speech, it would be impossible for you to be sure that each of your
audience members has a winnable case. So a better purpose statement for this speech, my audience will be able to list the five steps for preparing a small claims case. This purpose statement is receiver oriented, specific, and realistic. It also suggests an organizational pattern for the
speech ("the five steps"), which can be a bonus in a carefully worded purpose statement. 331 324-351_Ch10_Adler 332 2/28/05 PART FOUR 9:54 AM Page 332 PUBLIC COMMUNICATION Consider the following sets of purpose statements: LESS EFFECTIVE MORE EFFECTIVE To talk about professional wrestling (not receiver oriented) After listening
to my speech, my audience will understand that kids who imitate professional wrestlers can be seriously hurt. To tell my audience about textbook prices (not specific) After my speech, the audience will understand that kids who imitate professional wrestlers can be seriously hurt. To tell my audience about textbook prices (not specific) After my speech, my audience will understand that kids who imitate professional wrestlers can be seriously hurt.
themselves to fighting cultural imperialism. (not realistic) After listening to my speech, my audience will understand why some countries want to restrict the importation of American films and television programs. The Thesis Statement So far we have discussed how to select a topic, how partially to focus that topic through its general purpose, and
how to focus it further through its specific purpose. Your next step in the focusing process is to formulate your thesis statement. The thesis statement for your
small claims speech might be worded like this: Arguing a case on your own in small claims court is a simple, five-step process that can give you the same results you would achieve with a lawyer. Unlike your purpose statement is usually formulated later in the
speech-making process, after you have done some research on your topic. The progression from topic to purpose to thesis is, therefore, another focusing process, as you can see in the following examples: Topic: Grade inflation is good General Purpose: To entertain Specific Purpose: After listening to my speech, my audience members will be unafraid to
march up to their professor and say, "Give me an 'A' or else." Thesis Statement: Handing out high grades as if they were Halloween treats makes everybody look good, and it doesn't cause cavities. Topic: Can the Internet cure the common cold? General Purpose: After listening to my speech, my audience members will use
the information available on the World Wide Web to be better informed before they see their doctors. Thesis Statement: Online medical data can save you the cost and hassle of an unnecessary trip to the doctor. 324-351 Ch10 Adler 2/28/05 9:55 AM Page 333 CHAPTER 10 CHOOSING AND DEVELOPING A TOPIC Topic: Organ donation 333
CULTURAL IDIOM General Purpose: To persuade Specific Purpose: After listening to my speech, audience members will recognize the importance of organ donors, thousands of us needlessly die every year. You can help
this needless dying. milling around: moving around: moving around as a group the student union: a building on college and university campuses where students gather for purposes of dining, recreation, and other general student needs ANALYZING THE SPEAKING SITUATION There are two components to analyze in any speaking situation: the audience and the
occasion. To be successful, every choice you make in putting together your speech—must be appropriate to both of these components. The Listener: Audience Analysis When you choose a gift, it's important to consider the person who will receive it; what would be an
ideal gift for one person could be a disaster for another. In the same way, you need to use audience analysis—an examination of certain pertinent characteristics of your listeners. Audience adaptation—changing
the way you say something so that it will be more meaningful or effective for a particular group of listeners—is something that we have a tendency to do naturally. Research suggests, for example, that in everyday conversations what we say to other adults.2
Your speeches will tend to be successful if you extend this principle of audience adaptation to your listeners. There are several factors to consider in audience analysis. You must look into people, as well as at them. Lord Chesterfield AUDIENCE TYPE There are the least three types of audience you are likely to encounter. We could call these types
 "passersby," "captives," and "volunteers." Each type suggests different audience interests. Passersby, as the name implies, are people who aren't much interested—at least not in advance—in what you have to say. A crowd milling around the student union or a shopping mall would fit into this type. With this type of audience, your first concern is to make
it aware of you as a speaker, either by interesting it in the topic or in you as a speaker. You might have to pick a really sensational topic or begin developing your topic by using some Source: ©The New Yorker Collection 1984 Joseph Farris from cartoonbank.com. PUBLIC COMMUNICATION CULTURAL IDIOM gimmick: a clever means of drawing attention, such as the loud costumes or wild theatrics street speakers often rely on. Captives are audience members who have gathered for some reason besides
the joy of hearing you speak. Students in a required gatherings. With captives you don't have to worry about devices and gimmicks to make them aware of you as a speaker; you do, however, have to use material that will get them
interested and keep them interested in what you have to say. Volunteers are audience members who have gatherings of most clubs, social organizations, and action groups. Even with an audience of a common interest. Students in elective courses, especially those with long waiting lists, would fit into this type. So would gathering of most clubs, social organizations, and action groups. Even with an audience of a common interest.
volunteers, you still have to maintain the listeners' interests; you never lose that responsibility. But when the audience is informed and involved, as volunteers tend to be, you can treat your topic in greater depth without worrying about losing their interest. Most college speech classes are a mixture of captives and volunteers, which means that you
don't have to sensationalize your topic or use gimmicks, but you do have to maintain interest and provide depth. AUDIENCE PURPOSE Just as you have a purpose for speaking, the audience members of your audience will have the same, obvious goal. Expectant parents at a natural
childbirth class are all seeking a healthy, relatively painless delivery, and people attending an investment seminar are looking for ways to increase their net worth. There are other times, however, when audience purpose can't be so easily defined. In some instances, different listeners will have different goals, some of which might not be apparent to
the speaker. Consider a church congregation, for example. Whereas most members might listen to a sermon with the hope of applying religious principles to their lives, a few might be interested in being entertained or in merely appearing pious. In the same way, the listeners in your speech class probably have a variety of motives for attending.
Becoming aware of as many of these motives as possible will help you predict what will interest them. Observing audience that can be labeled, such as number of people, age, gender, group membership, and so on. Demographic
characteristics might affect your speech planning in a number of ways. 3 For example: 1. Number of People. Topic appropriateness varies with the size of an audience you can be less formal and more intimate—you can, for example; talk more about your own inner feelings and personal experiences. If you gave a speech before a speech bef
five people as impersonally as if they were a standing-room-only crowd in a lecture hall, they would probably find you stuffy. On the other hand, if you talked to three hundred people about your unhappy childhood, you'd probably make them uncomfortable. Also, the larger your audience, the broader the range of interests and knowledge; with a small
audience you can choose a more specific topic. 324-351 Ch10 Adler 2/28/05 9:55 AM Page 335 CHAPTER 10 CHOOSING AND DEVELOPING A TOPIC 2. Gender. Traditionally, men and women have tended to be interested in different topics. These differences are becoming less pronounced as time goes on because men and women are becoming
any portion of your audience on the basis of gender. Every speech teacher has a horror story about a student getting up in front of a class composed primarily, but not entirely, of men and speaking on a subject such as "Picking up Chicks." The women, after they realize that the speech is not about methods of handling poultry, are invariably offended.
Most of the men will feel the same way. As with any of these demographic characteristics, the point is to analyze, not stereotype, your audience. If you talk down to any of your listeners, you have probably stereotype, your audience. If you talk down to any of your listeners, you have probably stereotype, your audience. If you talk down to any of your listeners, you have probably stereotyped them. The speaker who wants to speak to a mixed audience on how a man meets a woman, or vice versa, may still do so; the topic of
the speech, however, should be "meeting people."That way it can be treated in a manner that would be appropriate for both men and women. 3. Age. In many areas younger people and older people have different interests. Topics such as Social Security, child rearing, and school success are all influenced by the age of the audience. These differences the security is a security of the age of the audience. These differences the security is a security of the age of the audience. These differences the security is a security of the age of the audience. These differences the security is a security of the age of the audience. These differences the security is a security of the age of the audience. These differences the security is a security of the age of the audience. or Hillel), or occupation (Bartender's Union or National Communication Association). Group membership is often an important consideration in college day class and a "typical" c
church clubs, and the local chamber of commerce. Daytime students tend to belong to sororities and fraternities, sports clubs, and social action groups. Of the three elements in speechmaking—speaker, subject and person addressed—it is the last one, the hearer, that determines the speech's end and object. Aristotle You have to decide which
demographics of your audience are important for a particular speech. For example, when Stephanie Aduloju, a student at Creighton University in Nebraska, gave a speech on "Sexual Education for the Elderly," she knew age was an important demographic. She adapted to her college-aged audience this way: Get over the idea that older people don't
have sex. They do have sex, they will continue to have sex, and hopefully, when we're all their age, we'll be having sex. 324-351_Ch10 Adler 2/28/05 9:55 AM Page 337 CHAPTER 10 CHOOSING AND DEVELOPING A TOPIC But if you don't know any better, sex can kill you. We all have an older person close to our hearts, whether it's a grandparent,
parent, or family friend. Think about that person. 5 These four demographic characteristics are important examples, but the list goes on and on. Other demographic characteristics that might be important in a college classroom include ethnic background, educational level, economic status, hometown, year in school, and major subject. A final factor to
consider in audience analysis concerns members'attitudes, beliefs, and values. Fight for your opinions, but do not believe that they contain the whole truth, or the only truth. Charles A. Dana ATTITUDES, BELIEFS, AND VALUES Audience members'feelings about you, your subject, and your intentions for them are central issues in audience analysis.
One way to approach these issues is through a consideration of attitudes, beliefs, and values. 6 These characteristics are structured in human consciousness like layers of an onion. They are all closely interrelated, but attitudes lie closer to the surface, whereas beliefs and values underlie them. An attitude is a predisposition to respond to something in a
favorable or unfavorable way. A belief is an underlying conviction about the truth of something, which is often based on cultural training. A value is a deeply rooted belief about a concept's inherent worth or worthiness. An audience might, for example, hold the value that "freedom is a good thing." This value might be expressed in a belief such as
 "people should be free to choose their political leaders," which in turn will lead to the attitude that "voting is an important right and responsibility for all citizens." This in short leads to a predisposition to vote—in other words, a positive attitude toward voting. Figure 10-1 shows the relationship among attitudes, beliefs, and values. Experts in audience
analysis, such as professional speechwriters, often try to concentrate on values. As one team of researchers pointed out, "Values have the advantage of being comparatively small in number, and owing to their abstract nature, are more likely to be shared by large numbers of people." 7 Stable American values include the ideas of good citizenship, the
work ethic, tolerance of political views, individualism, and justice for all. You can often make an inference about audience members' attitudes by recognizing the beliefs and values they are likely to hold. For example, a group of religious fundamentalists might hold the value of "obeying God's word." This might lead to the belief— based on their
religious training—that women are not meant to perform the same functions in society as men. This, in turn, might lead to the attitude that women ought not to pursue careers as firefighters, police officers, or construction workers. Values You can also make a judgment about one attitude your audience members hold based on your knowledge of other
attitudes they hold. If your audience is made up of undergraduates who have a positive attitude toward civil rights and ecology. If they have a negative attitude toward civil rights and ecology. If they have a negative attitude toward civil rights and ecology.
sororities. This Attitudes should not only suggest some appropriate topics for each audience but should also suggest ways that those topics could be developed. Figure 10-1 Structure of Values, Beliefs, and Attitudes 337 324-351 Ch10 Adler 338 2/28/05 PART FOUR 9:55 AM Page 338 PUBLIC COMMUNICATION CRITICAL THINKING PROBE
opinion, this appeal is or is not effective. The Occasion The second phase in analyzing a speaking situation focuses on the occasion. The occasion of a speech is determined by the circumstances are time, place, and audience expectations. Few sinners are saved after the first twenty minutes of a sermon
Mark Twain The simplest way to customize a speech is to call members of the audience in advance and ask them what they expect from your session and why they expect it. Then use their quotes throughout your presentation. Allan Pease CULTURAL IDIOM a bachelor party: a men-only gathering of the groom and his friends roast: an entertaining
program where the guest of honor is teased in an affectionate manner TIME Your speech occupies an interval of time that is surrounded by other events. For example, other speeches might be made that set a certain tone or mood. External events such as elections, the start of a new semester, or
even the weather can color the occasion in one way or the other. The date on which you give your speech might have some historical significance relates in some way to your speech is also an essential consideration. You should choose a topic
Time"could conceivably be covered in ten minutes in enough depth to make it worthwhile. All speeches have limits, whether they are explicitly stated or not. If you are invited to say a few words, and you present a few volumes, you might not be invited back. PLACE Your speech also occupies a physical space. The beauty or squalor of your
surroundings and the noise or stuffiness of the room should all be taken into consideration. These physical surroundings can be referred to in your speech if appropriate. If you were talking about world poverty, for example, you could compare your surroundings to those that might be found in a poorer country. AUDIENCE EXPECTATION Finally, your
your presentation than if you were discussing the same subject with friends over coffee. When you are considering the occasion of a college class, a church sermon, and a bachelor party "roast," there are also many subtle
differences that will apply only to the circumstances of each unique event. 324-351_Ch10_Adler 2/28/05 9:55 AM Page 339 CHAPTER 10 CHOOSING AND DEVELOPING A TOPIC 339 SAMPLE ANALYSIS OF A SPEAKING SITUATION Audience: Employees in the Production Department of my company Situation: Training session on sexual harassment
Purpose: After I am finished speaking, I want audience members to view sexual harassment as a legitimate concern and to be careful to avoid communicating in a way that might be perceived as harassment lawsuit. The most likely offenders are several "good old
boys" who have worked in the Production Department a long time. They are really nice guys, and I know they view their jokes and comments as goodnatured fun and not harassment. On the other hand, several female employees have complained about being hassled by these men. One of my duties as an intern in the Human Resources Department of
my company is to share the latest information on sexual harassment with employees. My bosses know that this topic has been covered in my classes, and they decided I should pass it along. This is a tricky situation for me: First of all, these guys will be a captive audience, forced to listen to a subject that they find annoying. Also, I am younger than
anyone in my audience, and I'm a woman. In fact, I've been the target of some of the behavior I'm being asked to discourage! There's a strong risk that the men who are the target of my remarks won't take me seriously, so I have to change their attitude about the subject and me. I know that scolding and threatening these men would be a big mistake
Even if they didn't object out loud, they would ETHICAL CHALLENGE ADAPTING TO SPEAKING SITUATIONS probably regard me as some sort of chip-on-the-shoulder feminist and consider the advice I offered as "politically correct" and out of touch with the way the real world operates. To avoid this sort of negative reaction, I need to separate
myself from the law that they dislike, taking the position of sharing with them "here's what I've learned about how it works." I might even give them a few examples of harassment suits that I think were frivolous, so we can agree that some people are much too sensitive. That common ground will help put us on the same side. Then I can emphasize
that they don't have to agree with the law to follow it. I'll tell stories of people like them who suffered as targets of harassment could make all of our lives miserable. My basic argument will be that potentially harassing behavior "isn't worth it." I also hope to use my age and gender as
advantages. A couple of the men have told me that I know how angry and protective my dad would feel, and I'll tell them that I know that, as good fathers, they'd feel the
same way. I could also ask them to think about how they would feel if their wives, sisters, or mothers were the targets of jokes that made those women feel uncomfortable. I don't think any speech will totally reverse attitudes that were built over these men's lifetimes, but I do think that getting on their side will be much more effective than labeling
them as insensitive sexist pigs and threatening them with lawsuits. How much adaptation is ethical? How far would you go to be effective with a possible topic for a speech, one with a possible audience, and one with a possible occasion
2. Form groups of three members each, and place your cards face down, with one member's "audience" matched with a second member's "topic" and a third member's "topic" and occasion would most likely affect the way the speech was
developed. 4. Discuss the adaptation that would be necessary in each situation and the role ethics would play in determining how far you would go. 324-351 Ch10 Adler 340 2/28/05 PART FOUR 9:55 AM Page 340 PUBLIC COMMUNICATION Knowledge is of two kinds: We know a subject ourselves, or we know where we can find information upon it
Samuel Johnson GATHERING INFORMATION This discussion about planning a speech purpose and analyzing the speech situation makes it apparent that it takes time, interest, and knowledge to develop a topic well. Much of time to
reflect on your own ideas is essential. However, you will also need to gather information from outside sources. By this time you are probably familiar with both Internet search as forms of gathering information. Sometimes, however, speakers overlook some of the less obvious resources of the Internet and the library. More often
they also overlook interviewing, personal observation, and survey research as equally effective methods of gathering information. We will review all these methods here and perhaps provide a new perspective on one or more of them. Internet Research The content of the Web aspires to absolute variety. One might find anything there. It is like
rummaging the forefront of the collective global mind. Somewhere, surely, there is a site that contains . . . everything we have lost? William Gibson CULTURAL IDIOM string together: connect SEARCH ENGINES Searching the web is one of the most popular online activities. If you treat this activity like a game it can be fun, but under deadline
pressure it can be frustrating unless you approach it systematically. The main problem with trying to find information on the Web is that it is unstructured and unguided—the user to make some sense of this amorphous mass. For example, if you
were to enter the key words "television programming" on most search engines you would be presented with a list of more than fifty thousand sites. Now, if you might narrow your search by using a more specific term. In this case, however
even the term "MTV" will yield thousands of sites. Some search engines allow plain English queries where the user can type in a regular question, such as "Where can I find information about sexuality on MTV?" Plain English searches, however, will return lists that include every key word in the question. On Google, for example, the preceding
question recently returned 1,400,000 sites. The search box. You can string together several words to construct a very precise query. The techniques to use when doing so can vary depending on which search engine you are using, but
there are some standard symbols that work with a majority of these devices. You could narrow your search by using terms such as "MTV AND sexuality AND rock music NOT criticism." Most popular search engines also allow the use of a plus symbol () in front of each word that you want in your search results. For example,
if you were searching the Web for information about the causes of high blood pressure, you could type "high blood pressure causes." Just as the plus symbol, or NOT, lets you eliminate words you don't want to see. If you find your blood pressure
query is yielding results that show numerous pages about treatment instead of causes, you could type in "high blood pressure causes treatment." Many search engines enter the plus symbol for you, but you have to enter the 324-351 Ch10 Adler 2/28/05 9:55 AM Page 341 CHAPTER 10 CHOOSING AND DEVELOPING A TOPIC 341 UNDERSTANDING
COMMUNICATION TECHNOLOGY MAJOR SEARCH ENGINES Danny Sullivan, the editor of search engines because they are either well-known or well-used. On his list you will see reference to "crawlers" and "crawler-based results'
versus "directories" and "human-powered results." These describe the two major ways that search engines work. Crawlers use software robots to search the Web; directories are organized and edited by people. Top Choices Google www.google.com
based service provides both comprehensive coverage of the Web along with great relevancy. It's highly recommended as a first stop in your hunt for whatever you are looking for. Google provides the option to find more than Web pages, however. Using "tabs" on the top of the search box on the Google home page, you can easily seek out images from
across the Web or discussions that are taking place on Usenet newsgroups, scan through human-compiled information, or locate recent news articles from all over the world. Google offers excellent spell checking and easy access to dictionary definitions (just place "define," or "what is" before the term you would like to define). Google was originally a
Stanford University project by students Larry Page and Sergey Brin called BackRub. AllTheWeb.com www.alltheweb.com An excellent crawler-based search engine, AllTheWeb provides both comprehensive coverage of the Web and outstanding relevancy. If you tried Google and didn't find it, AllTheWeb should probably be next on your list. Indeed, it's
a first-stop search engine, for some. In addition to Web page results, AllTheWeb.com provides the ability to search for new stories, pictures, video clips, and music. Yahoo! www.yahoo.com Launched in 1994, Yahoo! is the Web's oldest "directory," a place where human editors organize Web sites into categories. Yahoo! search results pages include
"directory" links that take you to a list of Web sites that have been reviewed and approved by an editor. Yahoo! also uses crawler-based technology. Consider Yahoo! any time you think you might be well served by having a list of human-reviewed Web sites. It's also a good choice for popular queries, since the category listings it provides may help you
narrow in and refine your query. MSN Search is a shining example of the company putting that same effort into an online product. In particular, the company has its own team of editors that monitors the most popular
searches being performed and then handpicks sites that are believed to be the most relevant. After performing a search, "Popular Topics" shown below the search box on the results may also feature links to encyclopediate.
content from Microsoft Encarta or news headlines, at the top of the page. Sullivan also suggests that you strongly consider the following: AOL Search search.aol.com Ask Jeeves www.ask.com HotBot www.hotbot.com Lycos www.lycos.com Teoma www.teoma.com 324-351 Ch10 Adler 342 2/28/05 PART FOUR 9:55 AM Page 342 PUBLIC
COMMUNICATION minus symbol for yourself. Others have another option that performs the same function. For example, Google, Yahoo!, and AltaVista all allow a minus symbol. But in HotBot, you click on the "More Search Options" button and select "Must Not Contain" in the "Word Filter" section. You can sometimes also add NEAR, as in "Bush near
Cheney and (not Rumsfeld)," which would return items that mention George Bush close to Dick Cheney but do not mention Donald Rumsfeld. Many search engines allow you to place quotation marks around a phrase so only that combination of words will be returned, rather than any combination that happens to include one of those words. Thus you
could enclose "high blood pressure" or even "high blood pressure causes" so that phrase would be treated like one word. Type in "Gettysburg Address," and you won't get the irrelevant vacation sites and real estate listings that you won't get the irrelevant vacation sites and real estate listings that you won't get the irrelevant vacation sites and real estate listings that you won't get the irrelevant vacation sites and real estate listings that you won't get the irrelevant vacation sites and real estate listings that you won't get the irrelevant vacation sites and real estate listings that you won't get the irrelevant vacation sites and real estate listings that you won't get the irrelevant vacation sites and real estate listings that you won't get the irrelevant vacation sites and real estate listings that you won't get the irrelevant vacation sites and real estate listings that you won't get the irrelevant vacation sites and real estate listings that you won't get the irrelevant vacation sites and real estate listings that you won't get the irrelevant vacation sites and real estate listings that you won't get the irrelevant vacation sites and real estate listings that you won't get the irrelevant vacation sites and real estate listings that you won't get the irrelevant vacation sites and real estate listings that you won't get the irrelevant vacation sites are included by the irrelevant vacation sites and irrelevant vacation sites are irrelevant vacation sites and irrelevant vacation sites are irrelevant vac
 "Search for These Terms as a Phrase," which serves the same function. Be careful about the spelling of the term you want is spelled exactly the same way on the Web site. And try alternate spellings, if necessary. For example, if "CD-
ROM" was one of your terms, you should also try "CDROM" on "CD ROM." The OR command is useful for alternate spellings, as you could insert them, asking the search engine to look for either one, as in "CD-ROM" OR "CDROM" on the search engine to look for either one, as in "CD-ROM" on the search engine to look for either one, as in "CD-ROM" on the search engine to look for either one, as in "CD-ROM" on the search engine to look for either one, as in "CD-ROM" on the search engine to look for either one, as in "CD-ROM" on the search engine to look for either one, as in "CD-ROM" on the search engine to look for either one, as in "CD-ROM" on the search engine to look for either one, as in "CD-ROM" on the search engine to look for either one, as in "CD-ROM" on the search engine to look for either one, as in "CD-ROM" on the search engine to look for either one, as in "CD-ROM" on the search engine to look for either one, as in "CD-ROM" on the search engine to look for either one, as in "CD-ROM" on the search engine to look for either one, as in "CD-ROM" on the search engine to look for either one, as in "CD-ROM" on the search engine to look for either one, as in "CD-ROM" on the search engine to look for either one, as in "CD-ROM" on the search engine to look for either one, as in "CD-ROM" on the search engine to look for either one, as in "CD-ROM" on the search engine to look for either one, as in "CD-ROM" on the search engine to look for either one, as in "CD-ROM" on the search engine to look for either one, as in "CD-ROM" on the search engine to look for either one, as in "CD-ROM" on the search engine to look for either one, as in "CD-ROM" on the search engine to look for either one, as in "CD-ROM" on the search engine to look for either one, as in "CD-ROM" on the search engine to look for either one, as in "CD-ROM" on the search engine to look for either one, as in "CD-ROM" on the search engine to look for either one, as in "CD-ROM" on the search engine to look for either one, as in "CD-ROM" on the search engine to lo
engine's Help, Search Tips, and Frequently Asked Questions (FAQ) files. EVALUATING WEB SITES Students are sometimes so grateful for finding a Web site dealing with their topic that they forget to evaluate it. Like any information you would use, the Web site should be accurate and rational. Beyond that, there are three specific criteria that you can
use to evaluate the quality of a Web site: 1. Credibility. Anyone can establish a Web site, so it is important to evaluate where your information is coming from. Who wrote the page? Anonymous sources should not be used. If the sources are listed, are their credentials listed? If so, are they qualified to write this document? Is some kind of contact
information, such as an e-mail address, provided? What institution publishes the document? Remember that a handsome site design doesn't guarantee highquality information, but misspellings and grammatical mistakes are good signs of low quality. 2. Objectivity. What opinions (if any) are expressed by the author? The domain names .edu, .gov, .organized and grammatical mistakes are good signs of low quality. 2. Objectivity. What opinions (if any) are expressed by the author? The domain names .edu, .gov, .organized and .gov, .g
or .net are generally preferable to .com because if the page is a mask for advertising, the information might be biased. 3. Currency. When was it updated? How up-todate are the links? If any of the links are dead, the information might not be current. Electronic discussion groups can also be used as a form of
research. These discussion groups are formed by people with similar interests who are eager to share knowledge, so you can pose a question ("How is plastics recycling handled in your town?" (Any ideas about tax reform?") and collect a wide range of answers. You can find a list of discussion groups by using the search terms "listservs" 324
351_Ch10_Adler 2/28/05 9:55 AM Page 343 CHAPTER 10 CHOOSING AND DEVELOPING A TOPIC or "newsgroups" on any search engine. However you use the Internet, remember that it is a good addition to, but not a substitute for, library research. Library experts help you make sense of and determine the validity of the information you find. Also
most of the important database indexes of archived newspaper, magazine, and journal articles—indexes such as The Academic Index, The Magazine Index, Communication Abstracts, and The New York Times Index—can be found at the library but are not yet available to the home user without a hefty subscription fee. Library Research Libraries, like
people, tend to be unique. It's important to get to know your own library, to see what kind of special collections and services it offers, and just to find out where everything is. There are, however, a few resources that are common to most libraries, including the library catalog, reference works, periodicals, and nonprint materials. THE LIBRARY
CATALOG The library catalog is an ancient and noble informationstoring device. Today most catalogs are computerized, but whatever its form, the library, filed according to subject, author, and title, so that you can look for general topics as well as for specific books and authors
REFERENCE WORKS Reference works will also be listed in the library catalog. There are encyclopedia of Social Sciences and The Encyclopedia of American History; there are encyclopedias galore, even specialized ones such as The
World Almanac, Facts on File, and The Guinness Book of World Records; you can find out Who's Who in America or even Who Was Who. You can follect a lot of facts in a short time in the reference room. Reference works are good for uncovering basic information, definitions, descriptions, and sources for further investigation. Of course, not all
reference works are books. Several encyclopedias are available on CD-ROM. The current best-sellers are Compton's, Microsoft's Encarta, Britannica, and Grolier's, all of which provide multimedia images and sound. There are many specialized reference works on CD-ROM also. Those who subscribe to online services such as America Online also have
wide range of reference materials available to them, and there are others available to anyone with Internet access (see box on page 341). PERIODICALS Magazines, journals, and newspapers are good resources for finding recently published material on interesting topics. Indexes such as The Readers' Guide to Periodical Literature will enable you to
find popular magazine articles on just about any subject. Specialized indexes such as Psychological Abstracts can be used to find on- 343 A library is a sacred place. For four thousand years, humanity has gone through dreadful turmoils, varied
glories. How do we distill the past? How do we retain the memories? Libraries. Vartan Gregorian 324-351 Ch10 Adler 344 2/28/05 PART FOUR 9:55 AM Page 344 PUBLIC COMMUNICATION CULTURAL IDIOM line newspaper articles. Periodicals are a good source of high-interest, up-to-date information on your topic. stripe: kind, sort NONPRINT
MATERIALS Most libraries are also treasuries of nonprint and audiovisual materials. Films, records, tapes, and videotapes can be used not only as research tools but also as aids during your presentation. Your library probably has an orientation program that will acquaint you with what it has to offer in the way of nonprint materials. DATABASES Most
services, magazines, scholarly journals, conference papers, books, law journals, conference papers, books, law journals, and other sources. Other popular databases include Dialog Information Retrieval Service and Expanded Academic ASAP. With a conscientious search strategy (using the techniques we discussed for search engines on the Internet), you should be able to locate dozens of
citations on your topic in just a few minutes. After you have located the items you want, it is possible to read abstracts or even entire articles on the screen of the library's computer terminal—or print out a list of citations for further review. LIBRARIANS If you have explored all the sources mentioned in the preceding section, and you still can't find
exactly what you need, seek out a librarian. Today's librarian are trained in special search techniques, and their familiarity with the resources of their library is exhaustive. Of course, part of the effectiveness of your interaction with the librarian will depend on your communication skills: your ability to ask clear, specific questions; to be direct but polite
and to listen effectively. This is also true in other forms of information-gathering interviews. Interviews. Interviews in the answers, but The Answers. Somewhere, sprinkled out amongst the best minds of the century, are clues. And someone's tongue is bound to slip
Digby Diehl The information-gathering interview is an especially valuable form of research on a college campus because so many experts of every stripe run loose there, from librarians to professors to lab technicians. The interview allows you to view your topic from an expert's perspective, to take advantage of that expert's years of
might be unclear can become more understandable through questions and answers. Interviews can be conducted faceto-face, by telephone, or by e-mail. If you do use an interview for research, you might want to read the section on that type of interview for research, you might want to read the section on that type of interviews can be conducted faceto-face, by telephone, or by e-mail. If you do use an interview for research, you might want to read the section on that type of interviews can be conducted faceto-face, by telephone, or by e-mail.
hand research that you have done yourself. You can think of personal observation as a simple form of experimentation. For example, if you wanted to prove that removing televisions 324-351 Ch10 Adler 2/28/05 9:55 AM Page 345 CHAPTER 10 CHOOSING AND DEVELOPING A TOPIC from the student union building would be beneficial, you might
include a personal observation like this: Last Wednesday I spent 7 to 10 P.M. in the lounge of the student union. Only three times during the evening did anyone attempt to start a conversation. Two of those attempts were met with a request for silence in deference to the television. If you wanted to prove your point further, you could go one step
beyond and observe the same situation under different circumstances: This Wednesday I received permission to remove the television: 1. Thirty conversations were begun. 2. Twenty-four of these conversations to remove the television from the student union. During those same hours, 7 to 10 P.M., I observed the following behavior in that lounge, this time without television: 1. Thirty conversations were begun. 2. Twenty-four of these conversations
continued, in depth, for more than ten minutes. 3. Seven groups of students decided on alternative entertainment for the evening, including going out to the gym, the mall, and the library. 4. Four new social acquaintances were made, one of which resulted in a TV date for the following Wednesday night. Personal observation is used to collect
information about your audience members. Because audience members love hearing information about themselves, observing their behavior in this way can be an extremely valuable form of investigation. Survey research—the distribution of questionnaires for people
to respond to—is that it can give you up-to-date answers concerning "the way things are" for a specific audience. For example, if you handed out questionnaires a week or so before presenting to a survey I conducted last week, 90
percent of the students in this class believe that body piercing is basically safe. Only 10 percent are familiar with the scarring and injury that can result from this practice. Two of you, in fact, have experienced serious infections from body piercing is basically safe. Only 10 percent are familiar with the scarring and injury that can result from this practice. Two of you, in fact, have experienced serious infections from body piercing is basically safe.
interest to your audience members because they were the ones who were surveyed. Another advantage of conducting your own survey is that it is one of the best way to collect the demographic data mentioned earlier. The one disadvantage of conducting your own survey is that, if it is used as a conducting your own survey is that it is one of the best way to collect the demographic data mentioned earlier. evidence, it might not have as much credibility as published evidence found in the library. But the advantages seem to outweigh the disadvantages of survey research in public speaking. No matter how you gather your information, remember that it is the quality rather than the quantity of the research that is most important. The key is to determine
                      e of research will answer the questions you need to have answered. Sometimes only one type of research will be necessary; at other times every type mentioned here will have to be used. 345 324-351 Ch10 Adler 346 2/28/05 PART FOUR 9:55 AM Page 346 PUBLIC COMMUNICATION CULTURAL IDIOM hit gold: was extremely
successful SAMPLE SPEECH The following speech was given by Ali Heidarpour, a student at the University of Oklahoma. Ali presented his speech at several intercollegiate tournaments, including the annual contest of the Interstate Oratorical Association at Rice University in Houston, Texas. Ali came across the topic of binge drinking in his leisure
reading during summer vacation, and he immediately felt it would make a good speech topic. Ali explains it this way: "My philosophy about public speaking in general is that you have to have compassion about what you're talking about, and I felt that binge drinking was a crisis on college campuses. I believed I could truly make a difference with this
speech. "9 As he thought about his topic, he realized that his general purpose was to persuade, and his specific purpose, based on his objectives, could be worded as follows: After listening to my speech, my audience members will personally avoid binge drinking, and will support programs to reduce binge drinking on their own campuses. As his
research progressed, his thesis statement emerged: Binge drinking on college students, but as college students who were active in speech contests. He reasoned that this audience tends to be intelligent and logical, but also serious
partyers. "I knew that at least some of my audience would not consider binge drinking to be a huge problem. In planning what I would say, I tried to be aware of the way those audience members might think about this issue." 10 Ali started his research early, in August before his school year began. He started by using the Google and Yahoo! search
engines, but hit gold when he went to his library's Lexis-Nexis database and entered the search term "binge drinking." He received a list of more than a thousand articles to choose from. With that amount of source material, he didn't feel that he needed to conduct an interview, survey, or personal observation. As you read his speech, think about
whether it might have been improved with any of these additional research sources. BINGE DRINKING ON COLLEGE CAMPUSES 11 A dramatic introduction, one that Ali will tie into the conclusion (see Paragraph 17). This is a well-chosen example culled from a newspaper article found on Lexis-Nexis. The introduction might be improved with a
mention of the significance of a .22 blood level. His announcement that Scott die of alcohol poisoning, drowning, or some other cause? Ali did this for dramatic effect. Do you think it was effective? Ali Heidarpour 1 A skier since age five, Scott Krueger knew he had a good shot at becoming the next captain of his
university's ski team. Thrilled at the possibility, Scott braced himself. According to the Christian Science Monitor of May 8, 2000, on the day of the competition he had an early pasta lunch to settle his stomach, and then he went for it. Scott and twelve other members of his ski team gathered that night around a keg in his basement while friends and
girlfriends stood by. At countdown, they began chugging one beer a minute. The last one to throw up would be an isolated incident of lost potential. But
in fact, college binge drinking is more of an issue than ever. Yet the fact is that at least two out of every five U.S. college students binge drink, and according to the New York Times of 324-351 Ch10 Adler 2/28/05 9:55 AM Page 347 CHAPTER 10 CHOOSING AND DEVELOPING A TOPIC March 24,2002, this results each year in approximately fourteen
hundred student deaths, a distressing number of assaults and rapes, a shameful amount of vandalism, and countless cases of suicide. 3 So today, in order for us to stop this alcohol haze, we will need to first examine the extent of binge drinking on college campuses. Then, we will explore why this problem continues to persist, and finally we will
consider some practical solutions on both the institutional and personal level. 4 So first, let us examine the extent of binge drinkers as male students who had five or more and female students who had four or more drinks in a row at least
once in a two-week period. In other words, binged three or more times in a two-week period. Overall, some 44 percent of college students had binged at least once during the past two weeks of this survey. 5 Binge drinking is also a women's
health issue. Because of differences in metabolism, women are more heavily affected by alcohol use, coupled with inexperience with drinking, puts young women in serious jeopardy for sexual assault. Female students who binge drink are more than three times as likely to be forced to have intercourse than those who do not
binge drink. The Oakland Tribune of January 4, 2003, estimates that each year more than a hundred thousand college women between the ages of 18 and 24 are forced to engage in sex while they are intoxicated and therefore unable to give consent. 6 The problem of binge drinking and its effects points to a deeply ingrained culture of student drinking
in America—a culture that spends $5.5 billion on alcohol each year, more than they spend on soft drinks, tea, milk, juice, coffee, and textbooks combined. A culture that still poses the question, why does this crisis continue to persist? 7 The Christian Science Monitor on May 21, 2002, reports that efforts to curb binge drinking so far have often sent
mixed messages. For example, Maryland State University and Johns Hopkins University converted a dining hall into a bar in an effort to control how much students drink and keep them from driving after drinking. The Boston Globe of May 11, 2002, reports that local bars around campuses cater to student's needs, with cheap pitchers of beer and
shuttles to round up students from campuses for a night of drinking. Some schools create ads in cooperation with alcohol manufacturers that emphasize responsible drinking is completely common. 8 This perception is another
major reason for the persistence of alcohol abuse, even though it is not correct. According to CNN.com, survey after survey of college students have told us that these populations regularly overestimate the behavior of their peers with regard to consumption of alcohol. This overestimation of risk-taking behavior suggests that social norms shape our
behavior. The study also went on to say that this false norm creates a baseless, but powerful, peer pressure among students that encourages them to override their own attitudes to match what they perceive is expected of them. Simply put, it encourages them to override their own attitudes to match what they perceive is expected of them.
persist, let us discuss some possible solutions on both the institutional and personal level, 347 The New York Times is considered the newspaper of record, so it has high credibility as a source of information. Ali's audience analysis suggested that a logical approach would be effective for his audience of forensics students. He uses another credible
source to define a key term and help define the problem. His audience analysis suggested that there would be female audience members, so Ali makes sure to stress the importance of his topic to them. Do you think an interview with an expert about the seriousness of this problem might have been useful here? His discussion of ineffective solutions is
the type of in-depth analysis that would appeal to this audience. Should he have attempted a survey within his own audience on their own perceptions of risk-taking behavior? Ali's thesis and purpose statement keep him on track. 324-351 Ch10 Adler 348 2/28/05 PART FOUR 9:55 AM Page 348 PUBLIC COMMUNICATION His purpose statement led
him to look for solutions that work. This is the solution that his purpose statement motivated him to focus on. Ali's audience analysis suggested that at least some of his listeners would immediately ask themselves how such a program could be funded. His audience analysis suggested that at least some of his listeners would immediately ask themselves how such a program could be funded.
student who would be willing to write this type of letter. His audience analysis suggested that a small percentage of this group would be campus leaders who might be motivated to initiate this solution on their own campus. His audience analysis suggested that a small percentage of this group would be campus leaders who might be motivated to initiate this solution on their own campus.
His conclusion summarizes the main points. Ali doesn't remind his audience who Scott Krueger was. According to his audience 10 While there are no easy solutions for this issue, an increasing number of campuses are trying a new approach. U.S. News & World Report of January 26, 1998, reports that Northern Illinois University had a 44 percent
reduction in binge drinking after nine years. Santa Clara University had a 28 percent reduction in binge drinking? A social norm campaign was in place. 11 Social norms marketing shows what is actually happening, and discredits what most students are thinking. The goal of this
campaign is to replace the false norm with the true information about most students' moderate and responsible behavior regarding alcohol. As a result the imagined peer pressure to drink to excess will decrease over time, as the true norm becomes known and accepted. 12 Social norms programs are funded by grants from various
organizations, including the U.S. Department of Education and the Center for Substance Abuse Prevention. To be eligible for the grants, colleges must acknowledge that an alcohol problem exists and must not cooperate with the purveyors of alcohol. 13 Next, on a personal level, the only way that the social norms campaign will be effective is by widely
publicizing the true norm, that most students do not binge drink. Therefore, I challenge everyone in this room to do two things. First, write a letter to the editor of your school's newspaper to inform the campus community about the problem of binge drinking on your campus. Make sure your voice is heard. 14 Also, meet with your student body
president and inform him or her about this epidemic and propose implementing a social norms campaign on your campus. When talking to your student body president, ensure that clubs and organizations are involved in the social norms campaign as well. 15 Finally, and this is as simple as it gets: Don't drink, and, in particular, don't binge drink. And
remind your friends to be responsible and safe as well. 16 In the past few minutes we have examined the extent of binge drinking on college campuses, explored why this problem continues to persist, and discussed some possible solutions on the institutional and personal level. The fact that so many U.S. college students binge drink indicates a failure
not only of our best and brightest but also of higher education, and to some extent our own attitudes. 17 Imagine one of your loved ones or classmates just fresh out of high school, eager to get a sense of freedom. They attend the college of their choice and one week later end up like Scott Kreuger. Don't let another college student fall victim to binge
drinking. analysis, they would remember. Do you agree? SUMMARY This chapter dealt with your first tasks in preparing a speech: choosing and developing a topic you find interesting, and choose a topic you already know something about. One of
your tasks is to understand your purpose so that you can stick to it as you prepare your speech. General purposes include entertaining, informing, and persuading. Specific purposes are expressed in the form of purpose statements, which must be receiver-oriented, specific, and realistic. 324-351 Ch10 Adler 2/28/05 9:55 AM Page 349 CHAPTER 10
Your next task is to formulate a thesis statement, which tells what the central idea of your speech is. Another early task is to analyze the speaking situation, including the audience type (passersby, captives, volunteers), purpose, demographics, attitudes, beliefs, and
values. When analyzing the occasion, you should consider the time (and date) your speech will take place, the time available, the location, and audience expectations. Although much of your speech will be based on personal reflection about your own ideas and experiences, it is usually necessary to gather some information from outside
sources. Techniques for doing so include interpersonal research (such as interviewing), personal observation, and surveys, as well as Internet and library research. Throughout all these preliminary tasks you will be discussed in the next chapter. KEY TERMS attitude 337
audience analysis 333 belief 337 databases 344 demographics 334 general purposes 330 purpose statement 330 search string 340 specific purpose 330 survey research 345 thesis statement 332 value 337 ACTIVITIES 1. Choosing a Topic Using the checklist on page 329, spend a few minutes on each of the activities listed. For the
"discussion" activities, pair up with another member of your class. Make a list of the possible speech topics on your list interest you the most? Which do you know the most about? Which seems to you to be the most promising
for your first speech? CHOOSING AND DEVELOPING A TOPIC 349 2. Formulating Purpose Statements Write a specific purpose statement for each of the following speeches: 1. An after-dinner speech at an awards banquet in which you will honor a team who has a winning, but not championship, record. (You pick the team. For example: "After
listening to my speech, my audience members will appreciate the individual sacrifices made by the members of the chess team.") 2. A classroom speech in which you explain how to do something. (Again, you choose the topic: "After listening to my speech, my audience members will know at least three ways to maximize their comfort and convenience
on an economy class flight.") 3. A campaign speech in which you support the candidate of your choice. (For example, "After listening to my speech, my audience members will consider voting for Alexandra Rodman in order to clean up student government.")
receiver oriented? Is it precise? Is it attainable? 3. Formulating Thesis Statements Turn each of the following purpose statement such as this: After listening to my speech, my audience will recognize the primary advantages and disadvantages of home teeth
bleaching, you might turn it into a thesis statement such as this: Home bleaching your teeth can significantly improve your appearance, but watch out for injury to the gums and damaged teeth. 1. At the end of my speech, the audience members will be willing to sign my petition supporting the local needle exchange program for drug addicts. 2. After
listening to my speech, the audience members will be able to list five disadvantages of tattoos. 3. During my speech on the trials and tribulations of writing a research paper, the audience members will show their interest by paying attention and their amusement by occasionally laughing. 324-351 Ch10 Adler 350 2/28/05 PART FOUR 9:55 AM Page
350 PUBLIC COMMUNICATION 4. Gathering Information Break up into groups of eight or fewer. Select a topic of your own choosing or one of the following: 1. Who came up with the idea of latitude and longitude lines, and how do they work? 2. College athletes are exploited by the schools they play for. 3. Our jury system does not work. 4. U.S.
schools are not safe. 5. What are the steps in the design and construction of the Macy's Thanksgiving Day parade balloons? 6. What do modern-day witches believe? 7. What does it mean to be innumerate, and how many people suffer from this problem? Assign each member of your group a different research source: 1. Internet search engine 2.
Library catalog 3. Reference works Rodman, George, and Ronald B.Adler. The New Public Speaker. Fort Worth, TX: Harcourt Brace, 1997. This classic text develops the theme that public speaking is especially important in the media/information age, with audiences who are bombarded with information from both the mass media and emerging
technologies such as the World Wide Web. See especially Part II, "Fundamental Steps in Speech Development." Sprague, Jo, and Douglas Stuart. The Speaker's Handbook, 6th ed. Fort Worth, TX: Harcourt Brace, 2002. A comprehensive reference guide laid out in twentyeight sections. See especially Section 2, "Topic Selection and Analysis," Section

3, "Audience Analysis," and Section 4, "Research." Ruggiero, Vincent Ryan. The Art of Thinking: A Guide to Critical and Creative Thought, 7th ed. Longman, 2003. Discusses the process of idea generation through techniques like brainstorming and then refining those ideas and preparing them to stand up to criticism. 4. Periodicals 5. Databases Feature
Films 6. Talk to a librarian. For descriptions of each film below and descriptions of other movies that illustrate choosing and developing a topic, see the CD-ROM that came with this book, and the Understanding Human Communication Web site at www.oup.com/us/uhc. There have been no popular films made about college students seeking an
interesting topic for a classroom speech. This oversight obviously leaves a gaping hole in American popular culture that one of the fledgling screenwriters reading this book might do something about. In the meantime, we'd like to suggest a few of our favorite films that make related points. 7. Talk to a professor. 8. Conduct a survey of your other class
members. During the next class period, report back to the class on which research sources were most productive. FOR FURTHER EXPLORATION Print Resources For a more detailed list of readings about choosing and developing a topic, see the CD-ROM that came with this book, and the Understanding Human Communication Web site at

Woodward and Carl Bernstein, crack the Watergate case through a variety of research skills, including interviewing and library research. Many movies hinge on a scene in which the hero goes to the library and uncovers the pivotal piece of evidence (e.g., The Hand that Rocks the Cradle, 1992, rated R) or gets that evidence from a difficult interview
(e.g., Silence of the Lambs, 1991, rated R). This movie, though, is all about research. 324-351 Ch10 Adler 2/28/05 9:55 AM Page 351 CHAPTER 10 CHOOSING AND DEVELOPING A TOPIC 351 Erin Brockovich (2000). Rated R. Lorenzo's Oil (1992). Rated PG-13. Based on true events, this is the inspirational story of a single mother (played by Julia
Roberts) who discovers a cover-up involving contaminated water in a local community, which is causing devastating illnesses among its residents. Working as a lowly legal assistant, Brockovich researches the problem through old medical records and interviews. She focuses on the purpose of her message and gives several speeches straight from the
heart. Her audience analysis enables her to connect with the people involved in the lawsuit in a way that high-priced lawyers could not. In the end, her research and speaking enable her to prove herself and turn her life around. Nick Nolte and
Susan Sarandon are the parents of a son with an incurable degenerative disease. Desperate to keep him alive, they research the disease for themselves and present a series of speeches that turns the medical community upside down. Shakespeare in Love (1998). Rated R. A movie that imagines the young William Shakespeare experiencing a case of
writer's block that is not unlike that of most college students when they are assigned their first speech. Shakespeare overcomes his block when he finds a topic, and a muse, he truly believes in. A wonderful love story, but on another level it is a story of the creative process and the power of words. 352-385 Ch11 Adler 2/28/05 10:00 AM Page 352 AFTER
STUDYING THE MATERIAL IN THIS CHAPTER . . . You should understand: 1. The importance of a speech organization. 2. The basic structure of a speech organization and types of supporting material. 6. The
functions and types of visual aids. You should be able to: 1. Construct an effective introduction, conclusion, and transitions. 3. Choose supporting material for a speech to make your points clear, interesting, memorable, and convincing. 4. Choose
appropriate visual aids for a presentation. 352-385 Ch11 Adler 2/28/05 10:00 AM Page 353 CHAPTER HIGHLIGHTS There are several tools that are designed to make the important job of structuring your speech easier and more effective. In this chapter we will look at Working outlines Speaking notes Following a few simples to make the important job of structuring your speech easier and more effective.
principles will enable you to build an effective outline. These principles deal with The rule of division The rule
ending your speech effectively will be especially important. With that in mind we will examine rules for effective 🔳 Introductions 🖿 Conclusions The effective we will explore: 🖿 Functions of supporting material 🖿 Types of supporting material 🖿 Style
of support, including narration and citation Visual aids are a unique type of supporting material. In this chapter we will examine: Types of visual aids Typ
COMMUNICATION Words differently arranged have a different meaning, and meaning different meaning, and meaning that knowledge aren't the same thing. It's frustrating to realize you aren't expressing your thoughts clearly, and it's equally unpleasant to know that a
speaker has something worth saying, yet be unable to figure out just what it is because the material is too jumbled to understand. In the following pages, you will learn methods of organization: Structuring and supporting your thoughts effectively.
message effectively will help you refine your own ideas and construct more-persuasive messages. A good speech is like a good building: Both grow from a careful plan. In Chapter 10 you began this planning by analyzing your audience, formulating a purpose, and conducting research. You apply that information to the structure of the speech through
outlining. Like any other form of plan, a speech outline is the framework on which your message is built. It contains your main ideas and shows how they relate to one another and your thesis. Virtually every speech outline ought to follow the basic structure outlined in Figure 11-1. This basic speech structure demonstrates the old aphorism for
speakers: "Tell what you're going to say, say it, and then tell what you said." Although this structure sounds redundant, the research on listening cited in Chapter 4 demonstrates that receivers forget much of what they hear. The clear, repetitive nature of the basic speech structure reduces the potential for memory loss, because audiences have a
tendency to listen more carefully during the beginning and ending of a speech. 1 Your outlines will reflect this basic speech structure. Outlines, and speaking notes. Working Outline Introduction I. Attention-getter II. Preview Body leading to the three types that are most important to us here are working outlines, formal outlines, and speaking notes.
II. III. IV. V. Three to five main points Conclusion I. Review II. Final remarks Figure 11-1 Structure Basic Speech A working outline will probably follow the basic speech structure, but only in rough form. It is for your eyes only. No one else need understand it, so you can use
whatever symbols and personal shorthand you find functional. Actually, it is probably a mistake to refer to a "working outline" in the singular form, because you will probably create several drafts as you refine your ideas. As your ideas solidify, your outline will change accordingly, becoming more polished as you go along. Formal Outline A formal
outline such as the one shown on page 357 uses a consistent format and set of symbols to identify the structure of ideas. A formal outline serves several purposes. In simplified form, it can be used as a visual aid (displayed while you speak or distributed as a handout). It can serve as a record of a speech that was delivered; many organizations send
outlines to members who miss meetings at which presentations were given. Finally, in speech classes, instructors often use speech outlines to analyze student speech speech outlines to analyze student speech outlines and includes the purpose, it is usually a full-sentence outline and includes the purpose, it is usually a full-sentence outline and includes the purpose, it is usually a full-sentence outline and includes the purpose, it is usually a full-sentence outline and includes the purpose, it is usually a full-sentence outline and includes the purpose, it is usually a full-sentence outline and includes the purpose, it is usually a full-sentence outline and includes the purpose outlines are such as a full-sentence outline and includes the purpose of the 
385_Ch11_Adler 2/28/05 10:00 AM Page 355 CHAPTER 11 ography of sources at the end of the outline. The bibliography should include full research, by Wayne Booth et. al.2 There are at least six standard bibliographic styles, and your instructor migh
assign one of them. Whichever style you use, you should be consistent in form and remember the two primary functions of a bibliographic citation: to demonstrate the credibility of your source and to enable the readers—in this case your professor or your fellow students— to find the source if they want to check its accuracy or explore your topic in
more detail. Another person should be able to understand the basic ideas included in your speech by reading the formal outline. In fact, that's one test of the effectiveness of your memory: to remind yourself Speaking Notes Like
your working outline, your speaking notes are for your use only, so the format is up to you. Many teachers suggest that speaking notes should be in the form of a brief key-word outline, with just enough infor mation listed to jog your memory but not enough to get lost in. Many teachers also suggest that you fit your notes on one side of one three-by-
five-inch note card. Other teachers recommend that you also have your introduction and conclusion on note cards, and still others recommend that you also have your introduction and conclusion on note cards, and still others recommend that you also have your introduction and conclusion on note cards, and still others recommend that you also have your introduction and conclusion on note cards. Your notes for a speech on diploma mills might look like the ones in Figure 11-2. O U T L I N E PRINCIPLES OF OUTLINING Over the years, a series of
rules or principles for the construction of outlines has evolved. These rules are based on the use of the standard symbols and format discussed next. Figure 11-2 Speaking Notes I N T Q R U O O Q D T U U E O C Q T T # U E I 1 O O C T # N O E 2 N C # L 3 U S I O N 355 352-385_Ch11_Adler 356 2/28/05 PART FOUR 10:00 AM Page 356 PUBLIC
COMMUNICATION UNDERSTANDING COMMUNICATION TECHNOLOGY CITING WEB SOURCES The World Wide Web is becoming an increasingly important source for speech research, and listing the date you found it, can establish the credibility of the source for
your instructor and help people who want to follow up on the source. When you list a Web source, you should also include, if possible, the author of the page, the organization that supports it, and the last date it was updated. A complete citation might look something like this: Ronald Rodman, "Citing Web Sites in Speech Bibliographies," Central
States Communication Association Web site, updated July, 2005, available at www.csca-net.org. Accessed August 24, 2005. The third item listed in the bibliography of the sample outline on page 357 is another example of a Web citation. Standard Symbols A speech outline generally uses the following symbols: I. Main point (Roman numeral) A.
Subpoint (capital letter) 1. Sub-subpoint (standard number) a. Sub-subsubpoint (lowercase letter) In the examples in this chapter, the major divisions of the speech—introduction, body, and conclusion—are not given symbols. They are listed by name, and the Roman numerals for their main points begin anew in each division. An alternative form is to
list these major divisions with Roman numerals, main points with capital letters, and so on. Standard Format In the sample outlines in this chapter, notice that each symbol is indented a number of spaces from the symbol above it. Besides keeping the outline neat, the indentation of different-order ideas is actually the key to the technique of outlining
it enables you to coordinate and order ideas in the form in which they are most comprehensible to the human mind. If the standard format is used in speaking notes, it will help you remember everything you want to say. Proper outline form is based on a few rules and
guidelines, the first of which is the rule of Division. The Rule of Division. The Rule of Division In formal outlines main points are divided, you will always have at least
two subpoints, and so on. Thus, the rule for formal outlines is: Never a "I" without a "II," never an "A" without a "B," and so on. Three to five subpoints, when nec- 352-385 Ch11 Adler 2/28/05 10:00 AM Page 357 CHAPTER 11
ORGANIZATION AND SUPPORT 357 SPEECH OUTLINE The following outline is based on a speech by Wesley Schawe of Kansas State University. 3 Title: "Diploma Mills" General purpose: To persuade Specific purpose: After listening to my speech, audience members will be aware of diploma mills and take steps to help eliminate them. Thesis: Phony and the steps to help eliminate them.
online universities threaten our education and public safety. III. What can we do about diploma mills? A. We should help shut down illegal diploma mills. 1. Be aware of false claims
made online. 2. Contact your state attorney general with your evidence. C. We should let employers know. CONCLUSION INTRODUCTION I. Attention-Getter: Joke about professors "weighing" papers to grade them II. Thesis statement III. Preview of main points II. Final remarks: Refer back to our opening example, restate
thesis. "Diploma mills may get a kick out of weighing your paper for a grade, but by shutting them down, we can finally tip the scales in our favor." BODY BIBLIOGRAPHY I. Why are diploma mills are proliferating. 1. There are more than 350 diploma mills worldwide. 2. Hundreds of companies and organizations accept
these degrees. 3. Hundreds of thousands of students are cheated: They believe they are enrolling in legitimate degrees are devalued by these fake diplomas
II. What causes diploma mills to be so popular? A. We have accepted distance education as legitimate learning. 1. A well-designed Web page can make an institution appear to be legitimate. 2. Differences are hard to spot. B. We have automatically accepted the value of advanced degrees. 1. There is too much emphasis on diplomas and not on the
expertise they represent. 2. Advanced degrees are automatically rewarded with promotions and pay raises. Josephine Barbera, "World Press Review, May 2005, p. 22. 385_Ch11_Adler 358 2/28/05 PART FOUR 10:00 AM Page 358 PUBLIC COMMUNICATION Control yourself when you have two things to say: say first one, then the topic of diploma mills, you might divide the body of your topic as shown in the sample outline on page 357
The Rule of Parallel Wording George Polya Your main points should be worded in a similar, or "parallel," manner. For example, if you are developing a speech against capital punishment is not constitutional: It does not
comply with the Eighth Amendment. III. Capital punishment is not civilized: It does not allow for a reverence for life. Whenever possible, subpoints should each contain one, and only one, idea. (After all, they can't really be parallel if one is longer or
contains more ideas than the others.) This will enable you to completely develop one idea before moving on to another one in your speech. If you were discussing cures for indigestion, your topic might be divided incorrectly if your main points looked like this: I. "Preventive cures" help you before eating. II. "Participation cures" help you during and
after eating. You might actually have three ideas there and thus three main points: I. Prevention cures (during eating). II. Postparticipation cures (during eating). III. Postparticipation cures (during eat
oldest, largest to smallest, best to worst, or in a number of other ways that follow. The organizing patterns, or chronology, is one of the most common patterns of organization. The period of time could be anything from centuries to
seconds. In a speech on airline food, a time pattern might look like this: I. Early airline food: the passenger starves Arranging points according to the steps that make up a process is another form of time patterning. The topic "Recording a Hit Song"
might use this type of patterning: I. Find an agent II. Record the demo CD III. Promote the song 352-385 Ch11_Adler 2/28/05 10:00 AM Page 359 CHAPTER 11 Time patterns are also the basis of climax patterns, which are used to create suspense. For example, if you wanted to create suspense in a speech about military intervention, you could
chronologically trace the steps that eventually led us into Vietnam, Afghanistan, or Iraq in such a way that you build up your audience's curiosity. If you told of these steps through the eyes of a soldier who entered military service right before one of those wars, you would be building suspense as your audience wonders what will become of that soldier
The climax pattern can also be reversed. When it is, it is called anticlimactic organization. If you were going to explain the things that caused that soldier was killed in a specific war, and then you went on to explain the things that caused that soldier was killed in a specific war, and then you went on to explain the things that caused that you were going to explain the things that caused that soldier was killed in a specific war, and then you went on to explain the things that caused that soldier was killed in a specific war, and then you went on to explain the things that caused that you were going to explain the things that caused that you were going to explain the things that caused that you were going to explain the things that caused that you went on to explain the things that caused that you went on the things that caused that you went on the things that caused that you went on the things that you were going to explain the things that you went on the things the things that you went on the things that you went on the things the thi
be using anticlimactic organization. This pattern is helpful when you have an essentially uninterested audience, and you need to build interest early in your speech to get the audience to listen to the rest of it. SPACE PATTERNS Space patterns are organized according to area. The area could be stated in terms of continents or centimeters or anything
in between. If you were discussing the Great Lakes, for example, you could arrange them from west to east: I. II. IV. V. Superior Michigan Huron Erie Ontario TOPIC PATTERNS A topical arrangement or topic pattern is based on types or categories. These categories could be either well known or original; both have their advantages. For example, a
division of college students according to well-known categories are advantageous because audiences quickly understand them. But familiarity also has its disadvantages. One disadvantage is the "Oh, this again" syndrome. If the members of an audience feel
they have nothing new to learn about the components of your topic, they might not listen to you. To avoid this, you could invent original categories for "college students" might look like this: I. Grinds—students who go to every class and read every assignment
before it is due and who are usually seen in dormitories telling everyone to turn their music down. II. Renaissance students—students who find a satisfying blend of scholarly and social pursuits. They go to most of their social life. III. Burnouts—students who have
a difficult time finding the classroom, let alone doing the work. ORGANIZATION AND SUPPORT 359 352-385 Ch11 Adler 360 2/28/05 PART FOUR 10:00 AM Page 360 PUBLIC COMMUNICATION Sometimes topics are arranged in the order that will be easiest for your audience to remember. To return to our Great Lakes example, the names of the
lakes could be arranged so their first letters spell the word "HOMES." Words used in this way are known as mnemonics. Carol Koehler, a professor of communication and medicine, uses the mnemonic "CARE" to describe the characteristics of a caring doctor: C stands for concentrate. Physicians should hear with their eyes and ears . . . A stands for
wrong and proposes a way to make things better. It is usually (but not always) divisible into these two distinct parts as in this example: I. The Problem: Addiction (which could then be broken down into addiction institute (which would study the root causes of
addiction in the same way that the National Cancer Institute studies the root causes of cancer) We will discuss this pattern in more detail in Chapter 14. CAUSE-EFFECT PATTERNS Cause-effect patterns are similar to problemsolution patterns in that they are basically two-part patterns: First you discuss something that happened, then you discuss its
effects. A variation of this pattern reverses the order and presents the effects first and then the causes. Persuasive speeches often have effect as the first two points of a speech on "workplace revenge" bike this: I. The effects of the
problem A. Lost productivity B. Costs of sabotage II. The causes of the problem A. Employees feeling alienated B. Employees' light treatment of incidents of revenge The third main point in this type of persuasive speech is often "solutions," and the fourth main point is
 Support the National Employee Rights Institute IV. Desired Audience Response: Log on to www.disgruntled.com MOTIVATED SEQUENCE One variation of the problem-solution pattern contains five steps and has come to the known as the motivated sequence:6 352-385 Ch11 Adler 2/28/05 10:00 AM Page 361 CHAPTER 11 ORGANIZATION AND
SUPPORT 361 UNDERSTANDING DIVERSITY NONTRADITIONAL PATTERNS OF ORGANIZATION In addition to the traditional patterns commonly used by women and ethnic speakers. For example, Cheryl Jorgenson-Earp is exploring a number of
alternative patterns that women have used historically. She argues that many speakers are uncomfortable with the standard organization patterns because of cultural backgrounds or personal inclinations. As alternatives, she proposes several less direct and more "organiz" patterns that provide a clear structure for a speech but have a less linear
form. One of these is the Wave pattern. In this pattern the speaker uses repetitions and variations of the major points of the speaker follows these with a variety of examples leading up to another major point. Perhaps the most famous famou
speech that illustrates this pattern is the Reverend Martin Luther King, Jr.'s "I Have a Dream." King used this memorable line as the crest of a wave that he followed with a "peak" conclusion that emerged from the final wave in the speech—repetition and variation on the
phrase "Let freedom ring." An excerpt from Sojourner Truth's "Ain't I a Woman?" speech also illustrates this pattern. That man over there says that women need to be helped into carriages, or over mud-puddles, or gives me any best place! And ain't I
a woman? Look at me! Look at my arm! I have ploughed and planted, and gathered into barns, and no man could head me! And ain't I a woman? I have borne thirteen children and seen them most all sold off to slavery, and when I
cried out with my mother's grief, none but Jesus heard me! And ain't I a woman? Clella Jaffe, Public Speaking: Concepts and Skills for a Diverse Society, 4th ed., © 2004. Reprinted with permission of Wadsworth, an imprint of the Wadsworth, an imprint of the Wadsworth Group, a division of Thomson Learning. Fax 800 730-2215. I. The attention step draws attention to your
subject. ("Cheers for the urban querillas of New York City, the dauntless men and women who let their dogs loose in the parks!"7) II. The need step establishes the problem. ("In this country, we tend to think that freedom for dogs encourages bad behavior. Nothing could be further from the truth. Freedom actually improves a dog's conduct.") III. The
large play groups in the parks, and are seldom seen on leashes.") V. The action step is a direct appeal for the audience to do something. ("Demand that parts of Central Park become leash-free. Dog lovers of New York, unite!") Chapter 14 has more to say about the organization of persuasive speeches. 352-385 Ch11_Adler 362 2/28/05 PART FOUR
10:00 AM Page 362 PUBLIC COMMUNICATION USING TRANSITIONS Transitions keep your message moving forward. They tell how one main point relates to the next main point. They tell how your subpoints relate to the points they are part of.
They tell how your supporting points relate to the previous point, showing how they relate to one another and to the upcoming point, showing how they relate to one another and to the previous point, another important consideration in [topic] is [upcoming point]." "But
isn't the only thing we have to worry about. more potentially dangerous." is even "Yes, the problem is obvious. But what are the solutions? Well, one possible solution is . . . "Sometimes a transition includes an internal review (a restatement of preceding points), an internal preview (a look ahead to upcoming points), or both: "So far we've discussed," is even "Yes, the problem is obvious. But what are the solutions? Well, one possible solution is . . . ."
and , , and . Our next points are ." You can find several examples of transitions in the sample speech at the end of this chapter. BEGINNING AND ENDING THE SPEECH The introduction and conclusion of a speech are vitally important, although they usually will occupy less than 20 percent of your speaking time. Listeners form their impression of a
speaker early, and they remember what they hear last; it is, therefore, vital to make those few moments at the beginning and end of your speech introduction. It serves to capture the audience's attention, preview the main points, set the mood and tone of the speech, and
demonstrate the importance of the topic. CAPTURING ATTENTION There are several ways to capture an audience's attention. The following discussion shows how some of these ways might be used in a speech entitled "Communication between Plants and Humans." Refer to the Audience The technique of referring to the audience is especially
effective if it is complimentary: "Julio's speech last week about how animals communicate was so interesting that I decided to explore a related topic: Whether people can communicate with plants!" 352-385 Ch11_Adler 2/28/05 10:00 AM Page 363 CHAPTER 11 ORGANIZATION AND SUPPORT 363 UNDERSTANDING COMMUNICATION
TECHNOLOGY SOFTWARE FOR ORGANIZATION AND OUTLINING Sometimes the best way to organize ideas is visually. Until recently, the best approach was to write ideas on note cards, spread them out on the table or floor, and rearrange them until a clear plan emerged. Now computers make the task quicker and easier. Any word processor can
be used to cut and paste blocks of ideas so you can rearrange the structure of your speech, and more advanced ones include a document map or "outline view" that shows your organizational structure as you go. Inspiration is a visual tool
for developing ideas. The program's "diagram view" provides an easy-to-use equivalent to the note card approach. Each idea you type into the computer appears on-screen inside its own box or circle. You can click on these ideas with your mouse and rearrange them until they fall into patterns that seem clear and effective. Then, with a simple
command, the visual map is turned into a traditional outline, suitable for conversion into speaker's notes, handouts, or visual aids. Besides serving as an outlining tool, Inspiration makes it easy to create concept maps, process flows, knowledge maps, flow charts, and other visual diagrams. You can find more information about Inspiration and
download a demonstration version of the software by pointing your Web browser to www. inspiration.com/freetrial/index.cfm. Word-processing programs like Microsoft Word include a document map, shown top, and an outline view, shown above, both of which show the organizational structure of the speech you are developing. 352-385_Ch11_Adlers.
communicate with plants." Refer to the Relationship between the Audience and the Subject "My topic, 'Communication with our study of human communication with our study of human communi
Audience The technique of referring to something familiar to the audience is especially effective if you are discussing a topic that might seem new or strange to that audience. Audience attention will be attracted to the familiar among the new in much the same way that we are able to pick out a friend's face in a crowd of strangers. For example, "See
that lilac bush outside the window? At this very moment it might be reacting to the joys and anxieties that you are experiencing in this classroom." Cite a Startling Fact or Opinion A statement that surprises audience members is bound to make them sit up and listen. This is true even for a topic that the audience considers old hat; if the audience
members think they've heard it all before about plant-human communication, you might mention, "There is now actual scientific evidence that plants appreciate human communication, you might mention, "There is now actual scientific evidence that plants appreciate human communication, you might mention, "There is now actual scientific evidence that plants appreciate human communication, you might mention, "There is now actual scientific evidence that plants appreciate human communication, you might mention," There is now actual scientific evidence that plants appreciate human communication, you might mention, "There is now actual scientific evidence that plants appreciate human communication, you might mention," There is now actual scientific evidence that plants appreciate human communication, you might mention, "There is now actual scientific evidence that plants appreciate human communication, you might mention," There is now actual scientific evidence that plants appreciate human communication has been actual scientific evidence that plants appreciate human communication has been actual scientific evidence that plants appreciate human communication has been actual scientific evidence that plants appreciate human communication has been actual scientific evidence that plants appreciate human communication has been actual scientific evidence and the plants appreciate human communication has been actual scientific evidence and the plants appreciate human communication has been actual scientific evidence and the plants appreciate human communication has been actual scientific evidence and the plants appreciate human communication has been actual scientific evidence and the plants appreciate human communication has been actual scientific evidence and the plants appreciate human communication has been actual scientific evidence and the plants appreciate human communication has been actual scientific evidence and the plants appreciate human communication has been actual scientific evidence and the plants appreciate hu
people seem able to grow beautiful, healthy plants effortlessly, whereas others couldn't make a weed grow in the best soil?" This question is designed to make the audience respond mentally, "Yeah, why is that?" Tell an Anecdote A personal story perks up audience interest because it shows the human side of what might otherwise be dry, boring
information. "The other night, while taking a walk in the country, I happened on a small garden that was rich with lush vegetation. But it wasn't the lushness of the vegetation that caught my eye at first. There, in the middle of the garden, was a man who was talking quite animatedly to a giant sunflower." Use a Quotation Quotable quotes sometimes
have a precise, memorable wording that would be difficult for you to say as well. Also, they allow you to borrow from the credibility of plants and humans communicating, 'Personally, I cannot imagine a world so dull, so satiated, that it should reject out
of hand arresting new ideas which may be as old as the first amino acid in the chain of life on earth." Tell a Joke If you happen to know or can find a joke that is appropriate to your subject and occasion, it can help you build audience interest: "We once worried about people who talked to plants, but that's no longer the case. Now we only worry if the
plants talk back." Be sure, though, that the joke is appropriate to the audience, as well as to the occasion and to you as a speaker. 352-385_Ch11_Adler 2/28/05 10:00 AM Page 365 CHAPTER 11 PREVIEWING MAIN POINTS After you capture the attention of the audience, an effective introduction will almost always state the speaker's thesis and give
the listeners an idea of the upcoming main points. Katherine Graham, the former chairperson of the board of the Washington Post Company, address you. And I am especially glad the rules have been bent for tonight, allowing so many of you to
bring along your husbands. I think it's nice for them to get out once in a while and see how the other reasons for appreciating this chance to talk with you tonight. It gives me an opportunity to address some current questions about the press and its responsibilities—whom we are
responsible to, what we are responsible for, and generally how responsible our performance has been. 8 Thus, Ms. Graham previewed her main points: 1. To explain to whom the press is responsible for 3. To explain how responsible the press has been Sometimes your preview of main points will be even more
straightforward: "I have three points to discuss: They are, and industrial for suspense, humorous effect, or stalling for time to win over a hostile audience. In that case, you might preview only your thesis: "I
am going to say a few words about ." "Did you ever wonder about ?" "is one of the most important issues facing us today." SETTING THE MOOD AND TONE OF YOUR SPEECH Notice, in the example just given, how Katherine Graham began her speech by joking with her audience. She was speaking before an all-male organization; the only women in
the audience were the members' wives. That is why Ms. Graham felt it necessary to put her audience members at ease by joking with them about women's traditional role in society. By beginning in this manner, she assured the men that she was going to
approach her topic with wit and intelligence. Thus, she set the mood and tone for her entire speech. Imagine how different that mood and tone would have been if she had begun this way: Before I start today, I would just like to say that I would never have accepted your invitation to speak here had I known that your organization does not accept
women as members. Just where do you Cro-Magnons get off, excluding more than half the human race from your little club? DEMONSTRATING THE IMPORTANCE OF YOUR TOPIC TO YOUR AUDIENCE Your audience analysis, you should
state directly why your topic is of importance to your audience members. This importance should be related as closely as possible to their specific needs at that specific needs at tha
it, but to end it requires considerable skill. Lord Mancroft Page 366 ample, Stephanie Hamilton, a student at North Dakota State University, presented a speech about loopholes in the justice system when crimes of violence occur on cruise ships. After telling the story of a rape aboard ship, she established the importance of her topic this way: Each
year, millions of people take to the seas on cruises. Many of us have taken a cruises of our own or plan to take one someday and practically everyone knows at least someone were found guilty of a crime, would we want them
free? That is exactly what is happening without laws of recourse in place for our protection. We don't need to let our family, friends, neighbors or ourselves be taken advantage of and never given justice. 9 The Conclusion, like the introduction, is an especially important part of your speech. Your audience members will have a tendency to
listen carefully as your speech draws to a close; they will have a tendency to consider what you say at the end of your speech as important and to remember it. Because of this, the conclusion has three essential functions: to review your main points, and to provide a memorable final remark. You can review your thesis either by
repeating it or by paraphrasing it. Either way, your conclusion should include a short summary statement: And so, after listening to what I had to say this afternoon, I hope you agree with me that the city cannot afford to lose the services of the American Society for the Prevention of Cruelty to Animals. You will probably also want to review your main
points. This can be done directly: "I made three main points about the ASPCA today. They are . . ." But your main points can also be reviewed artistically. For example, first look back at that example of an introduction by Katherine Graham; then read her conclusion to that speech: So instead of seeking flat and absolute answers to the kinds of problems
I have discussed tonight, what we should be trying to foster is respect for one another's conception of where duty lies, and understanding of the real worlds in which we try to do our best. And we should be hoping for the energy and sense to keep on arguing and questioning, because there is no better sign that our society is healthy and strong. Let's
take a closer look at how and why this conclusion was effective. Ms. Graham posed three questions in her introduction. She dealt with those questions in her speech and reminded her audience, in her conclusion, that she had answered the questions in her speech and reminded her audience, in her conclusion, that she had answered the questions in her speech and reminded her audience, in her conclusion, that she had answered the questions in her speech and reminded her audience, in her conclusion, that she had answered the questions in her speech and reminded her audience, in her conclusion was effective.
press responsible for? 3. How responsible has the press been? REVIEW (FROM CONCLUSION) 1. To its own conception of where its duty lies 2. For doing its best in the "real world" 3. It has done its best 352-385_Ch11_Adler 2/28/05 10:00 AM Page 367 CHAPTER 11 Finally, you should devise a striking summary statement for your conclusion to help
your audience remember your thesis. Ray Bramson, a student at California State University, Chico, gave a speech on the dangers of recycling medical devices and ended his conclusion with this statement: "It seems that in cutting costs, health care providers are ignoring one very important fact: human life cannot be recycled." That statement was
concise but memorable. You can make your final remarks most effective by avoiding the following mistakes: DO NOT END ABRUPTLY Make sure that your conclusion accomplishes everything it is supposed to accomplish. Develop it fully. You might want to use signposts such as "Finally . . . ," In conclusion . . . ," or "To sum up what I've been talking
about here . . . " to let your audience know that you have reached the conclusion of the speech. BUT DON'T RAMBLE EITHER Prepare a definite conclusion, and never, never end by mumbling is "Oh, yes, and something like," Well, I guess that's about all I wanted to say . . . " DON'T INTRODUCE NEW POINTS The worst kind of rambling is "Oh, yes, and something like," Well, I guess that's about all I wanted to say . . . " DON'T INTRODUCE NEW POINTS The worst kind of rambling is "Oh, yes, and something like," Well, I guess that's about all I wanted to say . . . " DON'T INTRODUCE NEW POINTS The worst kind of rambling is "Oh, yes, and something like," Well, I guess that's about all I wanted to say . . . " DON'T INTRODUCE NEW POINTS The worst kind of rambling is "Oh, yes, and something like," Well, I guess that's about all I wanted to say . . . " DON'T INTRODUCE NEW POINTS The worst kind of rambling is "Oh, yes, and something like," Well, I guess that's about all I wanted to say . . . " DON'T INTRODUCE NEW POINTS The worst kind of rambling is "Oh, yes, and something like," Well, I guess that was a supplied to the conclusion of the speech.
forgot to mention is . . ." DON'T APOLOGIZE Don't say, "I'm sorry I didn't have more about this" or "I'm sorry I didn't have more time to research this subject" or any of those sad songs. They will only highlight the possible weaknesses of your speech, and there's a good chance those weaknesses were far more apparent to you than to your
audience. Instead, it is best to end strong. You can use any of the attention-getters suggested for the introduction and remind your audience how it applies to the points you made in your speech. SUPPORTING
MATERIAL It is important to organize ideas clearly and logically. But clarity and logic by themselves won't guarantee that you'll interest, enlighten, or persuade others; these results call for the use of supporting materials. These materials. These materials.
of your speech. FUNCTIONS OF SUPPORTING MATERIAL There are four functions of supporting material. TO CLARIFY As explained in Chapter 3, people of different backgrounds tend to attach different backgrounds tend to attach different backgrounds tend to attach different meanings to words. Supporting material can help you overcome this potential source of confusion by helping you clarify key terms and ideas. For
example, when Ed Rubinstein, the economics analyst at the National Review, spoke at Hillsdale College in Michigan on "The Economics of Crime," he needed ORGANIZATION AND SUPPORT 367 CULTURAL IDIOM sad songs: statements meant to elicit sympathy 352-385_Ch11_Adler 368 2/28/05 PART FOUR 10:00 AM Page 368 PUBLIC
COMMUNICATION to clarify what he meant by a "career criminal." He used supporting material in this way: The career criminal, according to James Q.Wilson, was long ago identified as: "typically an impulsive young man who grew up in a discordant family where one or both parents had a criminal record, discipline was erratic, and human relations
were cold and unpredictable. He had a low IQ and poor verbal skills. His behavioral problems appeared early, often by age eight, and included dishonesty and aggressiveness. Even in kindergarten or first grade he was disruptive, defiant, and badly behaved. He had few friends and was not emotionally close to those associates with whom he began
stealing and assaulting."10 TO MAKE INTERESTING A second function of support is to make an idea interesting or to catch your audience's attention. When Daniel White, a student at Marshall University in West Virginia, gave his speech on cloning, he might have simply said, "There's been a lot of interest in cloning in the media recently." Instead, he
used supporting material to make the same point in a more interesting way: "British Scientists Clone the World's First Adult Mammal." On February 24 of this year, this headline, or something like it, was plastered on the front page of newspapers all across the nation. Coincidentally, the following weekend the new Star Trek episode revealed that Dr.
Julian Bashere of Deep Space Nine was a product of genetic engineering, the X-Files ran a string of shows dealing with clones, and recently the movie Multiplicity, another cloning story, hit the new release section of local video stores. 11 TO MAKE MEMORABLE A third function of supporting materials, related to the preceding one, is to make a point of supporting materials.
memorable. We have already mentioned the importance of "memorable" statements in a speech conclusion; use of supporting material in the introduction and body of the speech provides another way to help your audience retain important information. When Amy Jones of Western Kentucky University wanted to help her audience remember that
mosquitoes are a genuine health hazard, she used supporting material toward the end of her tenminute speech this way: We must realize that mosquitoes are more than just a nuisance. In the past nine minutes, 75 more children have died of malaria.12 TO PROVE Finally, supporting material can be used as evidence, to prove the truth of what you are
saying. When Brian Sosnowchik, a student at Pennsylvania State University, wanted to prove the point that chronic pain is a significant problem in the U.S. today, he used supporting material in this way: "I can't shower because the water feels like molten lava. Every time someone turns on a ceiling fan, it feels like razor blades are cutting through my
legs. I'm dying." Meet David Bogan, financial advisor from Deptford, New Jersey. Porsche, boat, and home owner, and victim of a debilitating car accident that has not only rendered him two years of chronic leg pain, but a fall from the pinnacle of success. Bogan has nothing now. Life to him, life with searing pain, is a worthless tease of agony and
distress. Unfortunately, according to the February 21, 2000 St. Louis Post-Dispatch, Bogan is one of 100 million Americans, nearly a third of the population, suffering from accidents to the simple daily stresses on our bodies. Moreover, in a personal telephone interview on March 30, 2000, Penny Cowan, 352-
385_Ch11_Adler 2/28/05 10:00 AM Page 369 CHAPTER 11 founder and Executive Director of the American Chronic Pain Association, disclosed, "Chronic pain is the most expensive health care problem today, and it certainly doesn't get the appropriate amount of attention from the medical community."13 ORGANIZATION AND SUPPORT 369
CULTURAL IDIOM Greek party: an event hosted by a fraternity or sorority TYPES OF SUPPORTING MATERIAL As you may have noted, each function of support could be fulfilled by several different types of material. Let's take a look at these different types of supporting material. DEFINITIONS It's a good idea to give your audience members
definitions of your key terms, especially if those terms are unfamiliar to them or are being used in an unusual way. A good definition is simple and concise. If you were giving a speech on binge drinking, you might define that term as follows: Researchers consider a person who has had five drinks on one occasion during the previous two weeks to be
binge drinker. EXAMPLES An example is a specific case that is used to demonstrate a general idea. Examples can be either factual or hypothetical, personal or borrowed. Ben Crosby, a student at Southern Utah University, used three examples to back up his point that meningitis could be a dangerous disease on college campuses: Jessie Gardiner
formerly a freshman at Frostburg State University, spent a Thursday and Friday night partying at the campus Delta Chi fraternity with two hundred other people. According to the Washington Post of February 25, 1999, Gardiner woke up the following State University, spent a Thursday and Friday night partying at the campus Delta Chi fraternity with two hundred other people. According to the Washington Post of February 25, 1999, Gardiner woke up the following State University, spent a Thursday and Friday night partying at the campus Delta Chi fraternity with two hundred other people.
admitted to the hospital. Madison, Wisconsin's "Channel Three News" ran a story on October 28, 1998, reporting the death of Sarah Gornick, a junior Bio-Chemistry major at the University of Wisconsin. Sarah, too, spent a Friday night at a Greek party. After experiencing severe symptoms of the disease, she was rushed to the hospital at 7
A.M.Tuesday, and died a half-hour later. Finally, Laura Tardiff was experiencing a sore throat on her way home from spring break festivities in Daytona Beach. Her temperature rose to 104 degrees. She woke the following morning vomiting. Only hours later, she was dead. The Chronicle of Higher Education of July 9, 1999 reported that the freshman
University of Georgia student died, like the others, as a victim of bacterial meningitis.14 Hypothetical examples can often be more powerful than factual examples ask audience members to imagine something—thus causing them to become active participants in the thought. Carrie A.Lydon of Ball State University used and the company of the
hypothetical example in her speech on the relationship between universities and sweatshop labor: Imagine one day walking into class only to find children chained to desks, sewing t-shirts, jackets, and other products representing your school. This means one of two things: either Kathy Lee Gifford is the new chancellor of your university, or your
university is utilizing sweatshop labor in order to turn a profit. In fact, the majority of companies that produce collegiate apparel violate standard working wages and conditions in at least one of their facilities. 15 A definition is the enclosing of the wilderness of an idea within a wall of words. Samuel Butler 352-385 Ch11 Adler 370 2/28/05 PART
FOUR 10:00 AM Page 370 PUBLIC COMMUNICATION STATISTICS Statistics are numbers that are arranged or organized to show that a fact or principle is true for a large percentage of cases. Statistics are numbers that are arranged or organized to show that a fact or principle is true for a large percentage of cases. Statistics are numbers that are arranged or organized to show that a fact or principle is true for a large percentage of cases. Statistics are numbers that are arranged or organized to show that a fact or principle is true for a large percentage of cases. Statistics are numbers that are arranged or organized to show that a fact or principle is true for a large percentage of cases.
Southwestern University in Oklahoma, used statistics to prove that criminals bought weapons at gun shows: A 1999 report by the U.S. Department of Justice and the Bureau of Alcohol, Tobacco, and Firearms estimated that felons illegally bought
weapons in their survey came from gun shows.16 Because statistics can be powerful proof, you have certain rules to follow when using them. You should also cite the source of the statistic when you use it. A final rule is based on effectiveness rather than ethics. You
should reduce the statistic to a concrete image if possible. For example, $1 billion in $100 bills would be about the same height as a sixty-story building. Using concrete image if possible. For example, one observer expressed the idea of Bill Gates's wealth this way: Examine Bill Gates's way and the Bill Gates's way 
Gates' wealth compared to yours: Consider the average American of reasonable but modest wealth. Perhaps he has a net worth of $100,000. Mr. Gates' worth is 400,000 times larger. Which means that if something costs $100,000 to him, to Bill it's as though it costs 25 cents. So for example, you might think a new Lamborghini Diablo would cost
$250,000, but in Bill Gates dollars that's 63 cents.17 Source: ©The New Yorker Collection 1974 Ed Koren from cartoonbank.com. All Rights Reserved. 352-385 Ch11_Adler 2/28/05 10:00 AM Page 371 CHAPTER 11 ANALOGIES/COMPARISON-CONTRAST We use analogies, or comparisons, all the time, often in the form of figures of speech, such as
similes and metaphors. A simile is a direct comparison that usually uses like or as, whereas a metaphor is an implied comparison that does not use like or as. So if you said that the rush of refugees," you would be using a simile. If you used the expression "a tidal wave of refugees," you would be using a simile is a direct comparison that does not use like or as.
metaphor. Analogies are extended metaphors. Here is the way Amanda Taylor, a student at the University of Florida, used an analogy between drinking from getting behind the wheel have been a top priority with government agencies and concerned
communities. But the London Times of January 15, 2000 explains that sleepy drivers can be just as deadly as drunk drivers. The Toronto Star of July 17, 1998 reports a survey by the American Automobile Association, or Triple-A, and the results are astounding. Highway patrol officers in the United States were polled and each reported "stopping a
motorist who appeared drunk only to find out that the driving does not have the same social stigma attached to it. According to the "2000 Sleep in America Poll," performed by the National Sleep Foundation, more than half
of over 1000 adults responding to a telephone interview reported driving while feeling drowsy in the past year—and a majority of those polled were outraged when feeling drowsy was compared to consuming alcohol.18 Analogies can be used to compare or contrast an unknown concept with a known one. For example, here's the way one doctor
explained the importance of regular medical check-ups for an audience of men: Guys, here's a good analogy to remember: Your own preventive checkups are like automobile checkups. While most of us are responsible for, even proud of, how we maintain our vehicles, we don't feel the same sense of accomplishment with our own bodies. Does getting
       up of the car engine guarantee it won't fail? Absolutely not. But it does significantly reduce the risk. The same same thing goes for preventive medical checkups. Do they guarantee nothing bad will happen to you? No, but by understanding the statistical risks people face, and by evaluating and addressing those risks, you improve your odds.
Taking care of your car means regular tune-ups. Taking care of your health means regular checkups. 19 ANECDOTES An anecdote is a brief story with a point, often (but not always) based on personal experience. (The word anecdote is a brief story with a point, often (but not always) based on personal experience.
address, when he wanted to make the point that America stood as a symbol of freedom to people in other lands, he used the following anecdote: It was back in the early eighties, at the height of the boat people, and a sailor was hard at work on the carrier Midway, which was patrolling the South China sea. The sailor, like most American servicemen,
was young, smart and fiercely observant. The crew spied on the horizon a leaky little boat—and crammed inside were refugees ORGANIZATION AND SUPPORT 371 352-385 Ch11 Adler 372 2/28/05 PART FOUR 10:00 AM Page 372 PUBLIC COMMUNICATION from Indochina hoping to get to America. The Midway sent a small launch to bring them to
the ship, and safety. As the refugees made their way through the choppy seas, one spied the sailor on deck, and stood up and called out to him. He yelled, "Hello American Sailor—Hello Freedom Man." A small moment with a big meaning, a moment the sailor, who wrote it in a letter, couldn't get out of his mind. And when I saw it, neither could I.20
QUOTATION/TESTIMONY Using a familiar, artistically stated saying will enable you to take advantage of someone else's memorable wording. For example, if you were giving a speech on personal integrity, you might quote Mark Twain, who said, "Always do right. This will gratify some people, and astonish the rest." A quotation like that fits Alexander
Pope's definition of "true wit": "What was often thought, but ne'er so well expressed." You can also use quotations as testimony, to prove a point by using the support of someone who is more authoritative or experienced on the subject than you are. When Rajiv Khanna, a student at Newman University in Kansas, wanted to prove that the distortion of
history was a serious problem, he used testimony this way: Eugene Genovese, Professor Emeritus of History at Emory University, states in the July 11 issue of the Chronicle of Higher Education, "The distortion of history remains a serious problem to the academic community and the country at large." He continues, "As individuals who are history-
making animals, we remain rooted in the past, and we are shaped by our society's version of its history."21 Sometimes testimony can be paraphrased. For example, when one business executive was talking on the subject of diversity, he used a conversation he had with Jesse Jackson, Sr., an African-American leader, as testimony: At one point in our
conversation, Jesse talked about the stages of advancement toward a society where diversity is fully valued. He said the first stage was the political power to actively participate in government—to be part of city hall, the Governor's office and Capitol Hill
Jesse was clearly focused, though, on the fourth stage—which he described as the ability to participate fully in the prosperity that this nation and Citation Most of the forms of support discussed in the preceding section could be presented in either of two ways:through narration
or through citation. Narration involves telling a story with your information. You put it in the form of a small drama, with a beginning, middle, and end. For example, Jennifer Deem of Indiana University narrated an example in her speech on dangerous highway rest areas: This past summer Allison Garrett took her young sons, Kevin and Kyle, on a
family vacation. Driving down a long stretch of Interstate 65, Ms. Garrett pulled into a rest area just outside Atlanta. She allowed the boys to use the restroom by themselves. According to the March 1997 Atlantic, only Kyle returned. Kevin is still missing, presumably abducted, possibly dead.23 352-385 Ch11 Adler 2/28/05 10:00 AM Page 373
CHAPTER 11 Citation, unlike narration, in the sense that the source is carefully stated. Citation will always include such phrases as "According to the July 25, 2005, edition of Time magazine," or "As Mr. Smith made clear in an interview last April 24." Jennifer Deem
cited a statistic and a definition later in her speech on rest areas: ORGANIZATION AND SUPPORT 373 CULTURAL IDIOM thin ice: a dangerous area An Associated Press Newswire from January 24, 1997 reports that state officials list 77% of all rest areas as "highly dangerous is defined as an area in which violent crimes such as
murder, rape, and attacks are more likely to occur. Some forms of support, such as anecdotes, are inherently more likely to be expressed as narration. Statistics, on the other hand, are nearly always cited rather than narrated. However, when you are using examples, quotation/testimony, definitions, and analogies, you often have a choice. ETHICAL
CHALLENGE THE ETHICS OF SUPPORT Have you ever "stretched" supporting material to help it conform to a point you were trying to make? (An example might be citing an "expert" for an idea of your own when discussing a social issue with a friend.)
Visual aids are graphic devices used in a speech to illustrate or support ideas. They can show how things relate to one another (a demonstration of a new ski binding, a diagram of how seawater is made drinkable). Visual aids can also show how things relate to one another (a
graph showing the relationships among gender, education, and income). Finally, visual aids can be highly effective as evidence. A photograph of toxic waste in your community, a chart clearly delineating a rise in crime, or a sample of an incorrectly wired electric heater that caused a fire can all be striking evidence for a particular point. Types of
Visual Aids There is a wide variety of types of visual aids. The most common types include the following. OBJECTS AND MODELS Sometimes the most effective visual aid is the actual thing you are talking about. This is true when the thing you are talking about is portable enough to use during a demonstration before an
audience: a piece of sports equipment such as a lacrosse racket or a small piece of weight-training equipment. Models are scaled representations of the object you are discussing and are used when that object is too large (the new campus arts complex) or too small (a DNA molecule) or simply don't exist any more (a Tyrannosaurus rex). DIAGRAMS A
diagram is any kind of line drawing that shows the most important properties of an object. Diagrams do not try to show everything but just those 352-385_Ch11_Adler 374 2/28/05 PART FOUR 10:00 AM Page 374 PUBLIC COMMUNICATION parts of a thing that the audience most needs to be aware of and understand. Blueprints and architectural plans
are common types of diagrams, as are maps and organizational charts. A diagram is most appropriate when you need to simplify a complex object or event and make it more understandable to the audience. The diagram in Figure 11-3 shows the parts of a grain of wheat. Figure 11-3 blogram: Wheat Grain WORD AND NUMBER CHARTS Word charts
and number charts are visual depictions of key facts or statistics. Shown visually, these facts and numbers will be understood and retained better than if you just talked about them. Many speakers arrange the main points of their speech, often in outline form, as a word chart. Other speakers list their main statistics. Figure 11-4 shows a word chart
listing the parts of a grain of wheat. This word chart could be used in conjunction with the diagram in Figure 11-3. PIE CHARTS Pie charts are shaped as circles with wedges cut into them. They are used to show divisions of any whole: where your tax dollars go, the percentage of the population involved in various occupations, and so on. Pie charts are
often made up of percentages that add up to 100 percent. Usually, the wedges of the pie are organized from largest to smallest. The pie chart in Figure 11-5 represents the favorite colors of Americans. 24 It reflects the findings of one study that 44 percent of Americans like blue best, and so on proportionately. BAR AND COLUMN CHARTS Bar charts,
such as the one shown in Figure 11-6, compare two or more values by stretching them out in the form of horizontal rectangles. Column charts, such as the one shown in Figure 11-7, perform Orange 2% Purple 5% Brown 2% Other 12% 1. BRAN Outer Layer Excellent Source of Fiber Removed in Processing Blue 44% Red 15% 2. GERM Excellent
Source of Nutrition Removed in Processing Green 15% 3. ENDOSPERM Starchy Low in Nutrients and Fiber Used in Most Processed Grains and Flours "America's Favorite Colors" Favorite Colors 352-385 Ch11 Adler 2/28/05 10:00 AM Page 375 CHAPTER 11
ORGANIZATION AND SUPPORT 375 the same function as bar charts but use vertical rectangles. LINE CHARTS A line chart maps out the direction of a moving point; it is ideally suited for showing changes over time. The enrollment of men
and women in college over a twenty-five-year period, for example, could be represented by the line chart in Figure 11-8. Media for the Presentation of Visual Aids Germany 3,500 6,500 Mexico France 7,700 Italy 7,900 Spain 8,000 Obviously, many types and variations of visual aids can be used in any speech. And a variety of materials can be used to
present these aids. CHALKBOARDS, WHITEBOARDS, AND POLYMER MARKING SURFACES Chalkboards or whiteboards can be bought in most classrooms. Polymer marking surfaces and their special marking pens can be bought in most classrooms. Polymer marking surfaces and their special marking pens can be bought in most classrooms.
The major advantage of these write-as-you-go media is their spontaneity. With them you can create your visual aid as you speak, including items generated from audience responses. Along with the odor of whiteboard markers and the squeaking of chalk, a major disadvantage of these media is their spontaneity. With them you can create your visual aid as you speak, including items generated from audience responses.
especially if several speeches are scheduled in the same room at the same hour. 20,000 Britain 0 Figure 11-6 5,000 10,000 Bar Chart: Americans Studying Overseas FLIP PADS AND POSTER BOARD Flip pads are like oversized writing tablets attached to a portable easel. As the name suggests, you reveal visuals on a flip pad one at a time by
turning pages. Flip pads enable you to combine the spontaneity of the chalkboard (you can write on them as you go) with a portability that enables you to prepare them in advance on rigid poster board and display them on the same type of easel. Despite their
advantages, flip pads and poster boards are bulky, and preparing professional-looking exhibits on them requires a fair amount of artistic ability. HANDOUTS The major advantage of handouts are excellent memory and reference aids. The
major disadvantage is that they are distraction of having them out, and second, there is the distraction of having them out at the end of the speech. 20,000 352-385 Ch11 Adler
376 2/28/05 PART FOUR 10:00 AM Page 376 PUBLIC COMMUNICATION 80 80 60 37 Red Bull Brewed Coffee Instant Coffee Mountain Dew Dr. Pepper Tea Pepsi Coca-Cola Classic 23 28 27 25 CAFFEINE, IN MILLIGRAMS Figure 11-7 Column Chart: Caffeine Content of Popular Drinks PROJECTORS When your audience is too large to view handheld
images, projectors are an ideal tool. Projectors come in several varieties, each of which works well for a specific purpose. Overhead projectors use transform ordinary pages into transparencies for a modest fee. If you have enough time to take a
photograph of your visual aid with slide film, you can use a slide projector for an especially effective presentation. Slides can be projected large enough to be seen easily, and their brilliance and clarity can be superior to those of any printed image. Computer projectors U.S. COLLEGE ENROLLMENT allow you to use a screen image directly from a
computer (in millions) screen, making them the most direct way to use computer software presentations. 6 5 4 3 Women Men 2 1 1984 1990 1995 2000 2005 2009 (projected) Figure 11-8 Line Chart: U.S. College Enrollment OTHER ELECTRONIC MEDIA A wide range of other electronic media is available as presentation aids. Audio aids such as tape
recordings and CDs can supply information that could not be presented any other way (comparing musical styles, for example, or demonstrating the differences in the sounds of gas and diesel engines), but in most cases you should use them sparingly. Remember that your presentation already relies heavily on your audience's sense of hearing; it's
better to use a visual aid, if possible, than to overwork the audio. Of course, there are audiovisual aids, including films, videotapes, and sound-on-slide. These should also be used spar- 352-385_Ch11_Adler 2/28/05 10:00 AM Page 377 CHAPTER 11 ORGANIZATION AND SUPPORT 377 UNDERSTANDING COMMUNICATION TECHNOLOGY USING
POWERPOINT Several specialized programs exist just to produce visual aids. The most popular of these programs is Microsoft's PowerPoint lets you build an effective slide show out of your basic outline. You can choose color-coordinated backgrounds and consistent formatting that match the tone and purpose of
your presentation. PowerPoint contains a clip art library that allows you to choose images to accompany your words. It allows you to import images from outside sources and to build your own charts. To use PowerPoint's "Wizard" function
Either way, the program will walk you through the stages of creating a slide show. It will, for example, show you a gallery of layout styles, and follow directions. PowerPoint allows you to choose from several combinations of charts, text, and clip art. These visuals, like
any type of computer-generated visual, can then be run directly from a computer projector, printed out in handout form. (See pages 375-377 for a discussion of the pros and cons of various presentation media.) Advanced uses of the program produce
multimedia presentations with animated slide, sound, and video elements. If you would like to learn more about using PowerPoint, there are several Web-based tutorial programs, which you can find easily by keying "PowerPoint, there are several Web-based tutorial programs, which you can find easily by keying "PowerPoint, there are several Web-based tutorial programs, which you can find easily by keying "PowerPoint" into your favorite search engine. See also the CD that accompanies this text. ingly, however, because they allow audience
members to receive information passively, thus relieving them of the responsibility of becoming active participants in the presentation. The general rule when using these media is: Don't let them get in the way of the direct, person-to-person contact that is the primary advantage of public speaking. CRITICAL THINKING PROBE THE EFFECTS OF
POWERPOINT After reviewing The Pros and Cons of PowerPoint on page 378, would you use to back up your argument? 352-385 Ch11 Adler 378 2/28/05 PART FOUR 10:00 AM Page 378 PUBLIC COMMUNICATION UNDERSTANDING
COMMUNICATION TECHNOLOGY THE PROS AND CONS OF POWERPOINT PowerPoint is by far the most popular form of presentation software. In fact, as one expert points out, "Today there are great tracts of corporate America where to appear at a meeting without PowerPoint would be unwelcome and vaguely pretentious, like wearing no
shoes."25 The Pros The advantages of PowerPoint are well known. Proponents say that PowerPoint slides can focus the attention of audience members on important information. By doing so, they make the logical structure of an
argument more transparent. Some experts think the primary advantage of PowerPoint is that it forces otherwise befuddled speakers to organize their thoughts in advance. Most, however, insist that its primary benefit is in providing two channels of information rather than just one. This gives audiences a visual source of information that is a more
```

```
efficient way to learn than just by listening. One psychology professor puts it this way: "We are visual creatures. Visual things stay put, whereas sounds fade. If you zone out for 30 seconds—and who doesn't?—it is nice to be able to glance up on the screen and see what you missed."26 But for all its popularity, PowerPoint has been receiving some bac
press lately, being featured in articles with such downbeat titles as "PowerPoint Is Evil"27 and "Does PowerPoint Make You Stupid?"28 But the statement that truly put the anti-PowerPoint argument on the map was a twenty-three page pamphlet with a less dramatic title, The Cognitive Style of PowerPoint, 29 because it was authored by Edward R.
Tufte, the well-respected author of several influential books on the effective design of visual aids. The Cons According to Tufte, the use of low-content PowerPoint slides trivializes important information. It encourages oversimplification by asking the presenter to summarize key concepts in as few words as possible—the ever-present bullet points. Tufte
also insists that PowerPoint makes it easier for a speaker to hide lies and logical fallacies. When dazzling slides are used, the audience stays respectfully still and a speaker can quickly move past gross generalizations, imprecise logic, superficial reasoning, and misleading conclusions. Perhaps most seriously, opponents of PowerPoint say that it is an
enemy of interaction, that it interferes with the spontaneous give-and-take that is so important in effective public speaking. "Instead of human contact, we are given human display." 30 The Middle Ground? PowerPoint proponents say that it is just a tool, one that can be used effectively or ineffectively. They
are the first to admit that a poorly done PowerPoint presentation can be boring and ineffective, such as the infamous "triple delivery," in which precisely the same text is seen on the screen, spoken aloud, and printed on the handout in front of you. One proponent insists, "Tufte is correct in that most talks are horrible and most PowerPoint slides are
bad—but that's not PowerPoint's fault. Most writing is awful, too, but I don't go railing against pencils or chalk."31 PowerPoint should be just one element of a speech, not the whole thing. They point out that even before the advent of the personal computer, some
people argued that speeches with visual aids stressed format over content, but that's a tendency that the effective speaker recognizes and works against. Thus, proponents say, the arguments for and against PowerPoint are really the arguments for
and against visual aids. These arguments are merely accentuated now that they apply to one of the most influential media technology changes the humans that use it in some way, and sometimes those changes are subtle and dangerous. Rules for
Using Visual Aids It's easy to see that each type of visual aid and each medium for its presentation have their own advantages. No matter which type you use, however, there are a few rules to follow. 352-385 Ch11 Adler 2/28/05 10:00 AM Page 379 CHAPTER 11 SIMPLICITY Keep your visual aids simple. Your goal is to clarify, not
confuse. Use only key words or phrases, not sentences. The "rule of seven" states that each exhibit you use should contain no more than seven lines of text, each with no more than seven words. Keep all printing horizontal. Omit all nonessential details. SIZE Visual aids should be large enough for your entire audience to see them at one time but
portable enough for you to get them out of the way when they no longer pertain to the point you are making. ATTRACTIVENESS Visual aids should be visually interesting and as neat as possible. If you don't have the necessary skills—either artistic or computer—try to get help from a friend or at the computer or audiovisual center on your campus.
APPROPRIATENESS Visuals must be appropriate to all the components of the speaking situation—you, your audience, and your topic—and they must emphasize the point you want to make—such as showing a map of a city transit
system while talking about the condition of the individual cars. RELIABILITY You must be in control of your visual aid at all times. Test all electronic media (projectors, computers, and so on) in advance, preferably in the room where you will speak. Just to be safe, have nonelectronic backups ready in case of disaster. Be conservative when you choose
demonstrations: Wild animals, chemical reactions, and gimmicks meant to shock a crowd can often backfire. When it comes time for you to use the visual aid, remember one more point: Talk to your audience, not to your visual aid, remember one more point: Talk to your audience, not to your visual aid, remember one more point: Talk to your audience, not to your visual aid, remember one more point: Talk to your audience, not to your visual aid, remember one more point: Talk to your audience, not to your visual aid, remember one more point: Talk to your audience, not to your visual aid, remember one more point: Talk to your audience, not to your visual aid, remember one more point: Talk to your audience, not to your visual aid, remember one more point: Talk to your audience, not to your visual aid, remember one more point: Talk to your audience, not to your visual aid, remember one more point: Talk to your audience, not to your visual aid, remember one more point: Talk to your audience, not to your visual aid, remember one more point: Talk to your audience, not to your visual aid, remember one more point: Talk to your audience, not to your visual aid, remember one more point: Talk to your audience, not to your audience, not to your visual aid, remember one more point: Talk to your audience, not to your visual aid, remember one more point: Talk to your audience, not to your visual aid, remember one more point: Talk to your audience, not to your audience, not to your visual aid, remember one more point: Talk to your audience, not to your visual aid, remember one more point: Talk to your audience, not to your visual aid, remember one more point: Talk to your audience, not to your visual aid, remember one more point: Talk to your audience, not to your visual aid, remember one more point: Talk to your audience, not to your visual aid, remember one more point and your visual aid.
eye contact. SAMPLE SPEECH The sample speech for this chapter was presented by Megan Solan, a student at Miami University of Ohio. She was coached by Allison Fischer and was one of the semi-finalists at the 2004 Interstate Oratorical Association Annual Contest, held at Glendale Community College in Arizona. This speech uses an impressive
array of supporting material: statistics, testimony, examples, definitions, analogies, and anecdotes. Megan used a modified effect-cause/problem-solution organization plan in this speech. The outline for this speech might look like this (the numbers in parentheses represent the corresponding paragraphs in the speech): Introduction I. Attention-getter
(1) Narrated example: The case of Rigoberto Nieves and three other returning soldiers. II. Statement of thesis: (2-3) Little has been done to help military personnel fight the psychological effects of war. III. Preview of main points (4) ORGANIZATION AND SUPPORT 379 CULTURAL IDIOM gimmicks: clever means of drawing attention wrapped up in:
giving all one's attention to something 352-385_Ch11_Adler 380 2/28/05 PART FOUR 10:00 AM Page 380 PUBLIC COMMUNICATION Body I. The effects of "psychological injury" can be devastating. (5) Transition: Preview of next two subpoints (6) B. The
modern perspective suggests that today's foreign conflicts might be even worse. (6-7) 1. The suicide rate from Operation Iraqi Freedom was extremely high. (7) 2. Other combat-related difficulties include post-traumatic stress disorder, depression, anxiety, and alcohol or substance abuse. (7) II. The causes of psychological injury lie deep in the military
culture. (8) Transition: Preview of two subpoints (8) A. Military training teaches attitudes and skills that are dangerous in civilian society. (9) B. Military culture discourages acceptance of mental health issues. (10) Example: Sergeant George Pogany's cowardice charge. (11) III. The solution to psychological injury involves several fronts. (12)
Transition: Preview of three subpoints (12) A. The Department of Defense must address mental health problems. (13) B. The military must aid soldiers in readjusting after returning home. (14-15) C. We should encourage the servicemen and women we know to seek help. (16) Conclusion I. Final remarks (17) II. Review of main points (17) III.
Restatement of thesis (17) SERVING THOSE WHO SERVE Megan begins with a striking series of examples. A possible visual aid here could be a photo of Rigoberto Nieves and his wife, downloaded from the Internet and displayed via digital projector. This part of the introduction sets the tone of the speech and demonstrates the importance of the
topic. Statistics used effectively. Megan Solan 1 On June 9, 2002, Sergeant First Class Rigoberto Nieves returned home from the war in Afghanistan. Two days later, Nieves shot and killed his twenty-eightyear-old wife, Teresa, and then himself as their relatives visited downstairs celebrating Nieves's return. In the five weeks that followed, three other
military personnel strangled, stabbed, or shot their wives, killing them, one taking his own life as well. The end result: six deaths in little over a month. All four soldiers were stationed at Fort Bragg, North Carolina, and three of them had just returned home from service in Afghanistan. 2 In response to these and other depressingly similar tragic events,
Secretary of Defense Donald Rumsfeld's office released a statement of Defense of Defense is choosing to focus on a single facet of the underlying and much more serious
problem. Domestic violence is merely a symptom of the stress and psychological injury resulting from the horrors of war, military officials' systematic disregard of such internal damage, and the severe stigma that surrounds those who seek treatment. 3 As the January 25, 2004, Observer reports, as many as one in five American military personnel in
Iraq will suffer from post-traumatic stress disorder, and more than six hundred servicemen and women have been evacuated from Iraq since 352-385 Ch11 Adler 2/28/05 10:00 AM Page 381 CHAPTER 11 last March for psychiatric reasons. The psychological effects of war can be so damaging, so invasive and harmful, yet little to nothing has been done
to help those who serve this country, and the consequences of this apathy have only just begun to reveal themselves. 4 To better understand the externe stress felt by those in the military and the effects such stress has on their lives; second, we will look at why such detrimental conditions persist, and
finally, we will consider what can be done to remedy the situation. 5 According to Dr. Jonathon Shay, author of the Homecoming, the problem is "psychological injury," that which soldiers suffer when they lose their peace of mind, their ability to function in society, and their belief injury," that which soldiers suffer when they lose their peace of mind, their ability to function in society, and their belief injury," that which soldiers suffer when they lose their peace of mind, their ability to function in society, and their belief injury," that which soldiers suffer when they lose their peace of mind, their ability to function in society, and their ability to function in society.
the existence of human virtues. We can explore this idea of psychological injury through both a historical and a modern-day perspective. 6 First, this is not a new problem. As Dave Grossman reports in his 1995 book, On Killing: The Psychological Cost of Learning to Kill in War and Society, during World War II, despite having initially turned away more
than 800,000 men and women who were deemed unfit for military service due to psychiatric reasons, the United States' armed forces lost an additional 504,000 soldiers from the fighting effort due to psychiatric reasons, the United States' armed forces lost an additional 504,000 soldiers from the fighting effort due to psychiatric reasons, the United States' armed forces lost an additional 504,000 soldiers from the fighting effort due to psychiatric reasons, the United States' armed forces lost an additional 504,000 soldiers from the fighting effort due to psychiatric reasons, the United States' armed forces lost an additional 504,000 soldiers from the fighting effort due to psychiatric reasons, the United States' armed forces lost an additional 504,000 soldiers from the fighting effort due to psychiatric reasons, the United States' armed forces lost an additional 504,000 soldiers from the fighting effort due to psychiatric reasons, the United States' armed forces lost are soldiers from the fighting effort due to psychiatric reasons, the United States' armed forces lost are soldiers from the fighting effort due to psychiatric reasons, the United States' armed forces lost are soldiers from the fighting effort due to psychiatric reasons, the United States' armed forces lost are soldiers from the fighting effort due to psychiatric reasons, and the fight
traditional, causing the stresses of life in the military to change as much as the military policy that commands it, and not without consequence. 7 National Public Radio's All Things Considered of March 12,2004, reports that twenty-nine soldiers who fought in Operation Iraqi Freedom have taken their own lives, a suicide rate that the February
21,2004, Seattle Times reports is 20 percent higher than the U.S. army average in recent years. And Dr. Jack Pierce, a psychiatrist at the Marine Corps' Health Services Headquarters, estimates, according to the June 25, 2003, Los Angeles Times, that 25 percent of soldiers returning from Iraq will suffer combat-related difficulties such as post-
traumatic stress disorder, depression, anxiety, and alcohol or substance abuse. 8 So why is there such a high rate of psychological injury in today's military? The answer to this question is twofold and can be addressed by looking at both military training practices and the lack of acceptance of and openness about mental health issues in the military.
First, many contend that such injuries are due to the intense training our soldiers receive. Dr. Jonathon Shay asserts in his previously cited book that soldiers learn skills such as the art of deception, the capacity to respond instantly with violent, lethal force, and the suppression of such emotions as compassion, horror, guilt, tenderness, grief, and
disgust, all necessary skills for combat, but all skills with dangerous potential within civilian society and severe consequences of prolonged combat, many soldiers are not getting the help they need because, as reported in the aforementioned Los Angeles Times
article, in the military, any contact with mental health care providers or any signs of depression or emotional distress almost instantly ruins careers. Special assignments and opportunities for promotion vanish, as seeking psychological help within military circles carries a severe stigma and is seen as a sign of weakness. ORGANIZATION AND
SUPPORT 381 Megan's preview of main points explains her modified effect-cause/problemsolution or ganizational plan: to first look at the effects of military stress, then look at the effects of military stress.
this topic. Historical perspective of her problem, using statistics from a book on the topic. Comparison/contrast with modern perspective. More statistical proof, from three highly credible sources, carefully cited. A transition that both reviews the main ideas of the previous point and previews the main ideas of the next point. Testimony paraphrased
from a credible source. Some important points are summarized here, so a word chart or a PowerPoint slide could list them: training includes (1) deception, (2) violent, lethal response, and (3) the suppression of emotions. Second subpoint concerning causes of psychological injury. 352-385 Ch11 Adler 382 2/28/05 PART FOUR 10:00 AM Page 382
PUBLIC COMMUNICATION Anecdote, narrated at length to clarify the complexity of the situation discussed. Analogy used as a transition previews final main point. First subpoint. Second subpoint. Second subpoint. Second subpoint. Second subpoint. Second subpoint. Second subpoint.
mental health workers, (2) more education about psychological injury, and (3) more awareness about mental health. Final subpoint: What the audience members can do. Possible visual aid: chart or handout containing contact information for the National Mental Health Association. The conclusion reviews the thesis and main points, and leaves the
audience with a memorably worded final statement. 11 So it was in the case of Staff Sergeant George Andreas Pogany who, one day after arriving in a combat zone in Iraq as a member of a Green Beret interrogation team, saw the mangled corpse of an Iraq is a member of a Green Beret interrogation team, saw the mangled corpse of an Iraq is a member of a Green Beret interrogation team, saw the mangled corpse of an Iraq is a member of a Green Beret interrogation team, saw the mangled corpse of an Iraq is a member of a Green Beret interrogation team, saw the mangled corpse of an Iraq is a member of a Green Beret interrogation team, saw the mangled corpse of an Iraq is a member of a Green Beret interrogation team, saw the mangled corpse of a member of a Green Beret interrogation team, saw the mangled corpse of a member of a Green Beret interrogation team, saw the mangled corpse of a member of a Green Beret interrogation team, saw the mangled corpse of a member of a Green Beret interrogation team, saw the mangled corpse of a member of a Green Beret interrogation team, saw the mangled corpse of a member of a Green Beret interrogation team, saw the mangled corpse of a member of a Green Beret interrogation team, saw the mangled corpse of a member of a Green Beret interrogation team, saw the mangled corpse of a member of a Green Beret interrogation team, saw the mangled corps of a member of a Green Beret interrogation team, saw the mangled corps of a member of a Green Beret interrogation team, saw the mangled corps of a member of a Green Beret interrogation team, saw the mangled corps of a member of a Green Beret interrogation team, saw the mangled corps of a member of a Green Beret interrogation team, saw the mangled corps of a member of a Green Beret interrogation team, saw the mangled corps of a member of a Green Beret interrogation team, saw the mangled corps of a member of a Green Beret interrogation team, saw the mangled corps of a member of a Green Beret interrogation team, saw the mangled corps of a member of a Green
experiencing feelings of anxiety. Pogany sought help from a superior, admitting that he was not fit for duty that day and needed counseling to help deal with the anxiety and, as a result, was sent home to Fort Carson, Colorado, charged with cowardice, an offense punishable by death. Though army psychologists diagnosed Pogany's reaction as a panic
attack and confirmed that his symptoms were consistent with normal combat stress reactions, today Pogany is assigned to cleaning detail at Fort Carson, and, though the charges have since been dropped, as he stated in a December 17, 2003, interview on NPR's Morning Edition, he has been stripped of his dignity and reputation, and his story only
serves to deter other soldiers from seeking help when in need. 12 The task now, to borrow Rumsfeld's terminology, is to "crack down," governmentally, within the force and in society at large, on psychological injury, the stressors that cause it, and the devastating consequences it creates. 13 First, the Department of Defense must shift its focus away
from the symptoms to address the real problem and its causes. Addressing domestic violence among soldiers does nothing for their mental health issues subsequently attends to issues of domestic violence. The mental health issues subsequently attends to issues of domestic violence.
its work toward bettering the psychological condition of those who serve. As the July 20, 2003, Washington Post reports, the army has recently implemented a program called Deployment Cycle of Support to aid soldiers in readjusting after returning home, using a checklist to determine which servicemen and -women may be at risk for such things as
alcohol abuse, domestic violence, or depression. 15 While debriefing and readjustment programs are vital, more must be done to assist soldiers during service, to combat the psychological effects of both intense training and battle. The number of mental health workers in the military must be increased, servicemen and -women must be educated about
psychological injury, and awareness about mental health must be heightened so that the stigma surrounding it can be diminished. 16 Finally, considering that currently there are still more than 350,000 U.S. troops deployed worldwide, the probability that nearly everyone in this room knows someone who either is or has just recently finished serving in
the military is extremely high, and our role in the resolution of this problem becomes more crucial than we may have originally thought. By arming ourselves with a deeper knowledge and understanding of the severe psychological effects of war, the subsequent mental health concerns, as well as treatment options, we can encourage the servicemen
and -women we know to seek help, work to diminish the stigma surrounding such issues and treatment is available on the National Mental Health Association Web site at www.nmha.org. 17 By now, the families of those
involved in the Fort Bragg tragedies of nearly two years ago have begun to move on, to adjust to a new normalcy incorporating the emptiness left by those who serve our country, to live without shame and to seek help without fear. That
should be our service to them. 352-385 Ch11 Adler 2/28/05 10:00 AM Page 383 CHAPTER 11 SUMMARY This chapter dealt with speech organization and supporting material. Speech organization and supporting material idea of a speech. The thesis is established in the introduction
developed in the body, and reviewed in the conclusion of a structured speech. The introduction will also gain the audience's attention, preview the main points, set the mood and tone of the speech, and demonstrate the importance of the topic to the audience. The conclusion will review your thesis and/or main points and supply the audience with a
memory aid. Organizing the body of the speech will begin with a list of points you might want to make. These points are then organized according to the principles of outlining. They are divided, coordinated, and placed in a logical order. Transitions from point to point to point to point to point to point to make this order apparent to your audience. Organization follows a pattern, such
as time, space, topic, problem-solution, cause-effect, motivated sequence, or climax arrangements. Supporting materials are the facts and information you use to back up what you say. Support include definitions of key terms; examples,
which can be real or hypothetical; statistics, which show that a fact or principle is true for a large percentage of cases; analogies, which acd a lively, personal touch; quotations and testimony, which are used for memorable wording as well as ideas
from a well-known or authoritative source; and visual aids, which help clarify complicated points and keep an audience informed about where you are in the general scheme of things. Any piece of support may be narrated (told in story form) or cited (stated briefly). ORGANIZATION AND SUPPORT

Communication Web site at www.oup.com/us/uhc. It is interesting to look at classic feature films as examples of organizational structure and how the human mind reacts to that structure. Consider the following: Catch-22 (1970). Rated R. This adaptation of Joseph Heller's classic novel flashes forward and backward, to scenes real and imaginary. The
movie shows how confusing this type of narrative organization can be: Director Mike Nichols's intention was to make the structure of the film reflect the surrealist insanity of the Air Corps during World War II. Critics loved the complexity, but audiences were just confused. Recommended for those who have read the book, however. ORGANIZATION
AND SUPPORT 385 Forrest Gump (1994). Rated PG-13. Tom Hanks is a lovable slow-witted boy who floats through life, managing to encounter first-hand every major social and political phenomenon of his time, from the rise of Elvis to the fall of Nixon. This film uses a chronological order, with each segment of the film based on a major event in recent
U.S. history. Pulp Fiction (1995). Rated R Starring John Travolta and Samuel L.Jackson as philosophical hitmen, this ultraviolent tale was a big hit at least partially because of its own that is intriguing. 386-403 Ch12 Adler 2/28/05 10:01 AM Page 386 AFTER STUDYING THE
MATERIAL IN THIS CHAPTER . . . You should understand: 1. The difference between facilitative stage fright. 2. The sources of delivery. 4. The visual and auditory aspects of delivery. You should be able to: 1. Overcome debilitative stage fright. 2. Choose the most
effective type of delivery for a particular speech. 3. Follow the guidelines for effective extemporaneous, impromptu, manuscript, and memorized speeches. 4. Offer constructive criticism of others' presentations. 386-403 Ch12 Adler 2/28/05 10:01 AM Page 387 CHAPTER HIGHLIGHTS Stage fright is one of the most formidable barriers to effective
speaking. In this chapter, we will look at Practicing your speech is essential. In this chapter present a series of quidelines for debilitative stage fright Ways
to overcome debilitative stage fright One of the first things to consider when preparing a speech is the style of delivery. In this chapter we will look at four types: Those dealing with the auditory aspects of delivery Finally, this chapter
people is public speaking. Number 2 is death. Now this means, to the average person, if you have to go to a funeral you're better off in the casket than giving the eulogy. Jerry Seinfeld Page 388 You've developed a purpose, you've chosen and researched a topic that suits your own interests, your audience, and the occasion. You feel confident about your
 ability to organize your ideas in a logical, effective way, and you've built up a healthy reserve of supporting material. But all that doesn't solve your primary problem: When you think about the actual act of standing before a group, your self-confidence begins to erode. What if your hands shake, or your voice squeaks? What if you forget what you
wanted to say? All of these questions make the prospect of talking to an audience seem threatening. Because the act of speaking before a group of listeners may be a relatively new one for you, we'll look at the process now. The purpose of this chapter is to make you feel more confident about yourself as a speaker and to give you a clearer idea of how
to behave before an audience. We will begin with a look at the topic of stage fright. DEALING WITH STAGE FRIGHT The terror that strikes the hearts of so many beginning speakers is called communication apprehension or speech anxiety by communication scholars, but it is more commonly known to those who experience it as stage fright.
is to realize that a certain amount of nervousness is not only natural but also facilitative. That is, facilitative stage fright is a factor that can help improve your performance. Just as totally relaxed actors or musicians aren't likely to perform at the top of their potential, speakers think more rapidly and express themselves more energetically when their
level of tension is moderate. It is only when the level of anxiety is intense that it becomes debilitative, inhibiting effective self-expression. Intense fear causes trouble in two ways. First, the strong emotion keeps you from thinking clearly. This has been shown to be a problem even in the preparation process: Students who are highly anxious about
giving a speech will find the preliminary steps, including research and organization, to be more difficult. Second, intense fear leads to an urge to do something, anything, to make the problem go away. This urge to escape often causes a speaker to speed up delivery, which results in a rapid, almost machine-gun style. As you can imagine, this boost in
speaking rate leads to even more mistakes, which only add to the speaker's anxiety. Thus, a relatively small amount of nervousness can begin to feed on itself until it grows into a serious problem. Sources of Debilitative Stage Fright Before we describe how to manage debilitative stage fright, it might be helpful to look at why people are afflicted with
the problem.4 386-403_Ch12_Adler 2/28/05 10:01 AM Page 389 CHAPTER 12 PREVIOUS NEGATIVE EXPERIENCE People often feel apprehensive about speech giving because of unpleasant past experiences. Most of us are uncomfortable doing anything in public, especially if it is a form of performance in which our talents and abilities are being
evaluated. An unpleasant experience in one type of performance can cause you to expect that a future similar situation will also be unpleasant. These expectations can be realized through the self-fulfilling prophecies discussed in Chapter 2. A traumatic failure at an earlier speech and low selfesteem from critical parents during childhood are common
examples of experiences that can cause later stage fright. You might object to the idea that past experiences cause stage fright. After all, not everyone who has bungled a speech or had critical parents is debilitated in the future. To understand why some people are affected more strongly than others by past experiences, we need to consider another
cause of speech anxiety. IRRATIONAL THINKING Cognitive psychologists argue that it is not events that cause people feeling unnecessarily apprehensive. Psychologist Albert Ellis lists several such beliefs, or examples of irrational thinking, which
we will call "fallacies" because of their illogical nature.6 PRESENTING YOUR MESSAGE 389 CULTURAL IDIOM bungled: done something imperfectly hoot: express rude and disparaging remarks a hole in one: hitting the golf ball in the hole with one swing of the club, a perfect shot I have a slight inferiority complex still. I go into a room and have to
talk myself into going up to people. If I'm the epitome of a woman who is always confident and in control, don't ever believe it of anyone. Barbara Walters 1. Catastrophic failure. People who succumb to the fallacy of catastrophic failure operate on the assumption that if something bad can happen, it probably will. Their thoughts before a speech
resemble these: "As soon as I stand up to speak, I'll forget everything I wanted to say." "Everyone will think my ideas are stupid." "Somebody will probably laugh at me." Although it is naive to imagine that all your speeches will be totally successful, it is equally naive to assume they will all fail miserably. One way to escape the fallacy of catastrophical transfer and the say." "Everyone will be totally successful, it is equally naive to assume they will all fail miserably. One way to escape the fallacy of catastrophical transfer and the say." "Everyone will be totally successful, it is equally naive to assume they will be totally successful, it is equally naive to assume they will be totally successful, it is equally naive to assume they will be totally successful, it is equally naive to assume they will be totally successful, it is equally naive to assume they will be totally successful, it is equally naive to assume they will be totally successful, it is equally naive to assume they will be totally successful, it is equally naive to assume they will be totally successful, it is equally naive to assume they will be totally successful, it is equally naive to assume they will be totally successful, it is equally naive to assume the say of th
failure is to take a more realistic look at the situation. Would your audience members really hoot you off the stage? Will they really think your ideas are stupid? Even if you did forget your remarks for a moment, would the results be a genuine disaster? It helps to remember that nervousness is more apparent to the speaker than to the audience.
Beginning public speakers, when congratulated for their poise during a speech, are apt to make such remarks as "Are you kidding? I was dying up there." 2. Perfection might serve as a target and a source of inspiration
(like the desire to make a hole in one while golfing), it is totally unrealistic to expect that you will write and deliver a perfect. 3. Approval. The mistaken belief called the fallacy of approval is based on the idea that it is vital—not just desirable—to gair
the approval of everyone in the audience. It is rare that even the best speakers please everyone, especially on topics that are at all controversial. To paraphrase Abraham Lincoln, you can't please all the people all the time—and it is irrational to expect you will. I don't know the key to success, but the key to failure is trying to please everyone. Bill
Cosby 386-403_Ch12_Adler 390 2/28/05 PART FOUR 10:01 AM Page 390 PUBLIC COMMUNICATION CULTURAL IDIOM blows . . . out of proportion: exaggerates freeze up: become immobilized through fear give . . . the edge: provide an advantage 4. Overgeneralization. The fallacy of overgeneralization might also be labeled the fallacy of
exaggeration, because it occurs when a person blows one poor experience out of proportion. Consider these examples: "I'm so stupid! I mispronounced that word." "I completely blew it—I forgot one of my supporting points." "My hands were shaking. The audience must have thought I was a complete idiot." A second type of exaggeration occurs when
a speaker treats occasional lapses as if they were the rule rather than the exception. This sort of mistake usually involves extreme labels, such as "always forget what I want to say." "I can never come up with a good topic." "I can't do anything right."
Overcoming Debilitative Stage Fright There are five strategies that can help you manage debilitative stage fright: Nervousness can give your speech the edge—and the passion—all good speeches need. It has always been so; two thousand years ago Cicero said all public speaking of real merit was characterized by nervousness. Dorothy Leeds 1. Use
nervousness to your advantage. Paralyzing fear is obviously a problem, but a little nervousness can actually help you deliver a successful speech. Use
the strategies below to control your anxiety, but don't try to completely eliminate it. 2. Be rational about your fears about speaking are rational. For example, you ought to be worried if you haven't researched or practiced your speech, and it's reasonable to be afraid of a hostile audience. But other fears are based on the fallacies you read
about on pages 389 and 390. It's not realistic to expect that you'll deliver a perfect speech, or that everyone in the audience will find your remarks totally fascinating. It's not realistic to expect that you'll deliver a perfect speech, or that everyone in the audience will find your remarks totally fascinating. It's not realistic to expect that you'll deliver a perfect speech, or that everyone in the audience will find your remarks totally fascinating. It's not realistic to expect that you'll deliver a perfect speech, or that everyone in the audience will find your remarks totally fascinating. It's not realistic to expect that you'll deliver a perfect speech, or that everyone in the audience will find your remarks totally fascinating. It's not realistic to expect that you'll deliver a perfect speech, or that everyone in the audience will find your remarks totally fascinating. It's not realistic to expect that you'll deliver a perfect speech, or that everyone in the audience will find your remarks totally fascinating.
how likely that occurrence actually is. And then analyze why that event, even if it did happen, would not be catastrophic. 3. Maintain a receiver orientation. Paying too much attention to your own feelings—even when you're feeling good about yourself—will take energy away from communicating with your listeners. Concentrate on your audience
members rather than on yourself. Focus your energy on keeping them interested, and on making sure they understand you. 4. Keep a positive attitude. Build and maintain a positive attitude toward your speech, and yourself as a speaker. Some communication consultants suggest that public speakers should concentrate on three
statements immediately before speaking. The three statements are: I'm glad I have the chance to talk about this topic I know what I'm talking about. I care about my audience. 386-403 Ch12 Adler 2/28/05 10:01 AM Page 391 CHAPTER 12 Repeating these statements (as long as you believe them!) can help you maintain a positive attitude. Another
technique for building a positive attitude is known as visualization. 8 This technique has been used successfully with athletes. It requires you to use your imagination to visualize the successful completion of your speech. Visualization can help make the self-fulfilling prophecy discussed in Chapter 2 work in your favor. 5. Most importantly, be prepared
Preparation is the most important key to controlling speech anxiety. You can feel confident if you know from practice that your remarks are well organized and supported a
announced and explained, and the lowest level during the time you speech. You should take advantage of this relatively lowstress time to think through the problems that would tend to make you nervous during the actual speech. For example, if your anxiety is based on a fear of forgetting what you are going to say, make sure
that your note cards are complete and effective, and that you have practiced your speech thoroughly (we'll go into speech practice in more detail in a moment). If, on the other hand, your great fear is "sounding stupid," then getting started early with lots of research and advanced thinking is the key to relieving your speech anxiety. TYPES OF
DELIVERY There are four basic types of delivery—extemporaneous, impromptu, manuscript, and memorized. Each type creates a different impression and is appropriate under different conditions. Any speech may incorporate more than one of these types of delivery. For purposes of discussion, however, it is best to consider them separately.
Extemporaneous An extemporaneous speech is planned in advance but presented in a direct, spontaneous manner. Extemporaneous speeches are conversational in tone, which means that they give the audience members the impression that you are talking to them, directly and honestly. Extemporaneous speeches are carefully prepared, but they are
prepared in such a way that they create what actors call "the illusion of the first time"—in other words, the audience hears your remarks as though they were brand new. This style of speaking is generally accepted to be the most effective, especially for a college class. In a classroom, you generally speak before a small audience (five to fifty people)
made up of people with diverse backgrounds. Spontaneous speaking allows you to benefit from both careful planning and spontaneous speaking is also the most common type of delivery in the "outside" world. Most of those involved in the speaking allows you to benefit from both careful planning and spontaneous speaking allows you to benefit from both careful planning and spontaneous speaking is also the most common type of delivery in the "outside" world. Most of those involved in the speaking is also the most common type of delivery in the "outside" world. communication-oriented careers find that the majority of their public speaking is done before audiences who, in terms of size and diversity of interests represented, resemble those found in a college classroom. Professional public speakers recognize the advisability of both careful planning and spontaneity with such an audience. PRESENTING YOUR
MESSAGE 391 386-403_Ch12_Adler 392 2/28/05 PART FOUR 10:01 AM Page 392 PUBLIC COMMUNICATION CULTURAL IDIOM "for the record": word-for-word documentation spur-of-the-moment: occurring without warning off the top of one's head: with little time to plan or think about Patrick Henry: a gifted orator wrap it up: finish A speech
presented extemporaneously will be researched, or otherwise predetermined. Because you speak from only brief, unobtrusive notes, you are able to move and maintain eye contact with your audience. In fact, one of the keys to successful
extemporaneous speaking is to avoid your notes as much as possible, and only refer to them to get yourself back on track if you feel a memory lapse coming on, or to make sure you've covered all your subpoints before moving on to your next main point. Because extemporaneous speaking creates a casual, less-than-formal atmosphere, it can seem
normal to stop occasionally and say, "Let me just make sure I've mentioned everything I wanted to tell you about this." The extemporaneous speech does have some disadvantages. It is difficult to keep exact im wording, or to be grammatically perfect with an extemporaneous speech. Therefore, if you are speaking as part of a radiocation and say, "Let me just make sure I've mentioned everything I wanted to tell you about this." The extemporaneous speech does have some disadvantages. It is difficult to keep exact in wording, or to be grammatically perfect with an extemporaneous speech.
or television broadcast or if your speech will be reproduced "for the record," you might want to use a manuscript or memorize your speech. Also, an extemporaneous speech requires time to prepare. On spur-of-the-moment speaking occasions, you will need to deliver an impromptu speech. Impromptu An impromptu speech is given off the top of one's
head, without preparation. An impromptu speech is often given in an emergency, such as when a scheduled speaker becomes ill and you are suddenly called upon. Lack of preparation is the main problem with impromptu speeches, but there are some advantages to this style of speaking. It is by definition spontaneous. It is the delivery style necessary
for informal talks, group discussions, and comments on others' speeches. It also can be an effective training aid; it can teach you to think on your feet and organize your thoughts quickly. To take full advantage of an impromptu speaking opportunity, remember the following points: It usually takes me more than three weeks to prepare a good impromptu
speech. Mark Twain 1. Take advantage of the time between being called on to speak and actually speaking. Even if you have only a minute, you can still scribble a few brief notes to protect against mental blocks. 2. Don't be afraid to be original; you don't have to remember what every other expert says about your topic—what do you say about it?
Review your personal experiences and use them. If nothing else, consider questions such as Who? What? When? Where? How? and formulate a plan to answer one or more of them. 3. Observe what is going on around you, and respond to it. If there were other speakers, you might agree or disagree with what they said. You can comment on the
audience and the occasion, too, as well as on your topic. 4. Keep a positive attitude. Remember that audience expectations are low. Audience members know you have not prepared in advance, and they don't expect you to be Patrick Henry. 5. Finally, and perhaps most important, keep your comments brief. Especially do not prolong your conclusion. If
you have said everything you want to say or everything you can remember, wrap it up as neatly as possible and sit down. If you forgot something, it probably wasn't important anyway. If it was, the audience will ask you about it afterward. 386-403_Ch12_Adler 2/28/05 10:01 AM Page 393 CHAPTER 12 PRESENTING YOUR MESSAGE Manuscript
Manuscript speeches are read word for word from a prepared text. They are necessary when you are speaking for the record, as when speaking at legal proceedings or when presenting scientific findings. The greatest disadvantage of a manuscript speech is the lack of spontaneity that may result. Manuscript readers have even been known, to their
extreme embarrassment, to read their directions by mistake: "and so, let me say in conclusion, look at the audience with great sincerity . . . Oops!" Manuscript speeches are difficult and cumbersome, but they are sometimes necessary. If you find occasion to use one, here are some guidelines: 1. When writing the speech, recognize the differences
between written messages and speeches. Speeches are usually less formal, more personal than written messages. 11 They use more adverbs, adjectives, and circumlocutions such as "well," and "as you can see." As one expert points out, "Speeches use more words per square thought than well-written essays or reports." 12 So when
you write a manuscript speech, write like you talk, not like you're writing a term paper. 3 THESE TERRORISTS KILL NOT MERELY TO END LIVES BUT TO DISTRUPT AND END A WAY OF LIFE. WITH EVERY ATROCITY THEY HOPE THAT AMERICA GROWS FEARFUL. RETREATING FROM THE WORLD AND FORSAKING OUR FRIENDS. THEY
font or larger. Underline the words you want to emphasize. 4. Use stiff paper so that it won't fold up or fly away during the speech. Print on only one side, and number the manuscript. 6. Take your time, vary your speed, and try to
concentrate on ideas rather than words. Memorized Speeches—those learned by heart—are the most difficult and often the least effective. They often seem excessively formal. However, like manuscript speeches, they may be necessary on special occasions. They are used in oratory contests, and they are used as training devices for
memory. They are also used in some political situations. For example, in televised debates between presidential candidates are usually allowed to make prepared speeches, but they are not allowed to use notes. Thus, they have to memorize precise, for the record wording, and make it sound natural. The legendary frontiers man Davy
Crockett once gave an object lesson on the benefits and hazards of memorized speeches. When he was running for Congress, Crockett always extemporized, adapting to his audience, but his opponent always gave the same memorized speech and delivered it first, leaving his adversary
with nothing to say.13 There is only one guideline for a memorized speech: Practice. The speech won't be effective until you have practiced it until you can present it with that "illusion of the first time" that we mentioned previously. PRACTICING THE SPEECH In most cases, a delivery that sounds smooth and natural is the result of extensive practice.
After you choose the appropriate delivery type for the speech you are giving, the best way to make sure that you are on your way to do that is to go through some or all of the following steps: Failure to prepare is preparing to fail. Basketball coach John Wooden
1. First, present the speech to yourself. "Talk through" the entire speech, including your examples and forms of support (don't just say, "This is where I present my statistics" or "Talk through our cranial bone structure, we are
sometimes surprised at what we sound like to others. Videotaping has been proven to be an especially effective tool for rehearsals, giving you an idea of what you look like, as well as sound like. 14 3. Present the speech in front of a small group of friends or relatives. 4. Present the speech to at least one listener in the room in which you will present the
final speech (or, if that room is not available, a similar room). Have your listeners critique your speech according to the guidelines that follow. 386-403 Ch12 Adler 2/28/05 10:01 AM Page 395 CHAPTER 12 GUIDELINES FOR DELIVERY The best way to consider guidelines for delivery is through an examination of the nonverbal aspects of presenting a
speech. As you read in Chapter 5, nonverbal behavior can change, or even contradict, the meaning of the words a speaker utters. If audience members want to interpret how you feel about something, they are likely to trust your nonverbal communication more than the words you speak. If you tell them, "It's great to be here today," but you stand before
them slouched over with your hands in your pockets and an expression on your face like you're about to be shot, they are likely to discount what you even more nervous. This cycle of speaker and audience reinforcing each
other's feelings can work for you, though, if you approach a subject with genuine enthusiasm. Enthusiasm is shown through both the visual and auditory aspects of Delivery Visual aspects of delivery include appearance, movement, posture
facial expression, and eye contact. APPEARANCE Appearance is not a presentation variable as much as a preparation variable. Some communication consultants suggest new clothes, new glasses, and new hairstyles for their clients. In case you consider any of these, be forewarned that you should be attractive to your audience but not flashy. Research
suggests that audiences like speakers who are similar to them, but they prefer the similarity to be shown conservatively.15 Fashionable dressers might not like someone dressed in fashions that are too avant-garde. Speakers, it seems, are perceived to be more
credible when they look businesslike. MOVEMENT Movement is an important visual aspect of delivery. The way you walk to the front of your audience, for example, will express your confidence and enthusiasm. And after you begin speaking, nervous energy can cause your body to shake and twitch, and that can be distressing both to you and to your
audience. One way to control involuntary movement is to move voluntarily when you feel the need to move. Don't feel that you have to stand in one spot or that all your gestures need to be carefully planned. Simply get involved in your movement is to move woluntarily when you move, you will
emphasize what you are saying in the same way you would emphasize it if you were talking to a group of friends. If you move voluntarily, you will use up the same energy that would otherwise cause you to move involuntarily, you will use up the same energy that would otherwise cause you will feel the greatest
contact. This creates what is known as the "action zone" in the typical classroom, within the area of the front and center of the room. Movement enables you to extend this action zone, to include in it people who would otherwise remain uninvolved. Without overdoing it, you should feel free to move toward, away, or from side to side in front of your
audience. Words represent your intellect. The sound, gesture and movement represent your feeling. Patricia Fripp 386-403 Ch12 Adler 396 2/28/05 PART FOUR 10:01 AM PUBLIC COMMUNICATION CULTURAL IDIOM squared off: evenly aligned deadpan: an expressionless face squarely: directly Once you make good eye contact with a person in
the audience, they will feel you are talking to the meaning of the words you use. It is difficult to bang your fist on a podium or take a step without conveying emphasis. Make the emphasis natural by allowing your message to create your
motivation to move. POSTURE Generally speaking, good posture means standing with your shoulders relatively squared off, and your feet angled out to keep your body from falling over sideways. In other words, rather than standing at military attention, you should be comfortably erect. Of course, you shouldn't get too
comfortable. There are speakers who are effective even though they sprawl on tabletops and slouch against blackboards, but their effectiveness is usually in spite of their posture to encourage their audience to relax. In that case,
sloppy posture is more or less justified. But because awesomeness is not usually a problem for beginning speakers, good posture should be the rule. Good posture should be the rule apparatus to work properly; when your breathing apparatus to work properly to the properly
help you get a positive audience reaction because standing up straight makes you more visible. It also increases your audience members will feel that you are interested enough in them to stand formally, yet relaxed enough to be at ease with them. FACIAL EXPRESSION The expression on your face can be more
meaningful to an audience than the words you say. Try it yourself with a mirror. Say, "You're a terrific audience," for example, with a smirk, with a warm smile, with a deadpan expression, and then with a scowl. It just doesn't mean the same thing. Remember also that it is just about impossible to control facial expressions from the outside. Like you
movement, your facial expressions will reflect your involvement with your message. Don't try to fake it. Just get involved in your message, and your face will take care of itself. EYE CONTACT Eye contact is perhaps the most important nonverbal facet of delivery. Eye contact not only increases your direct contact with your audience, but also can be
used to help you control your nervousness. Direct eye contact is a form of reality testing. The most frightening aspect of speaking is the unknown. How will the audience as you speak. Usually, especially in a college class, you will find that your audience is
more "with" you than you think. By deliberately establishing contact with any apparently bored audience members, you might find that they are interested; they just aren't showing that interest because they don't think anyone is looking. To maintain eye contact, you could try to meet the eyes of each member of your audience squarely at least once
during any given presentation. After you have made definite eye contact, move on to another audience member. You can 386-403 Ch12 Adler 2/28/05 10:01 AM Page 397 CHAPTER 12 PRESENTING YOUR MESSAGE 397 Source: ©The New Yorker Collection 1989 Robert Mankoff from cartoonbank.com. All Rights Reserved. learn to do this quickly, so
you can visually latch on to every member of a good-sized class in a relatively short time. The characteristics of appearance, movement, posture, facial expression, and eye contact are visual, nonverbal facets of delivery. Now consider the auditory nonverbal messages that you might send during a presentation. Auditory Aspects of Delivery As you read
in Chapter 5, your paralanguage—the way you use your voice—says a good deal about you, especially about your sincerity and enthusiasm. In addition, using your voice even control your voice even your paralanguage—the way you use your nervousness, which will enable you to control your voice even
more. But this cycle can also work in the opposite direction. If your voice is mostly a matter of recognizing and using appropriate volume, rate, pitch, and articulation. VOLUME The loudness of your voice is determined by the amount of air you push past the vocal
folds in your throat. The key to controlling volume, then, is controlling the amount of air you use. The key to determining the right volume is audience members can hear everything you say but not so loud that they feel you are talking to someone in the next room. Too much volume is
seldom the problem for beginning speakers. Usually they either are not loud enough or have a tendency to fade off at the end of a thought. Sometimes, when they lose faith in an idea in midsentence, they compromise by mumbling the end of a thought.
inappropriate volume is Senator Ted Kennedy. One researcher points out that "Kennedy tended to shout when an audience was small or uninterested or when he sensed he was losing them. Thus, his volume was often inappropriate to the time and place." 16 RATE Your speed in speaking is called your rate. There is a range of personal differences in
speaking rate. Daniel Webster, for example, is said to have spoken at around 90 words per minute, whereas one actor who is known for his fast-talking commercials speaks at about 250. Normal speaking speed, however, is between 120 and 150 words per minute. If you talk much more slowly than that, you may tend to lull your audience to sleep.
Faster speaking rates are stereotypically associated with speaker competence, 17 but if you speak too rapidly, you will tend to be unintelligible. Once again, your voice—pitch—is controlled by the frequency at which your vocal folds vibrate as
you push air through them. Because Many a pair of curious ears had been lured by that well-timed pause. Li Ang 386-403 Ch12_Adler 398 2/28/05 PART FOUR 10:01 AM Page 398 PUBLIC COMMUNICATION taut vocal folds vibrate at a greater frequency, pitch is influenced by muscular tension. This explains why nervous speakers have a tendency
occasionally to "squeak," whereas relaxed speakers seem to be more in control. Pitch will tend to follow rate and volume. As you speed up or become louder, your pitch will have a singsong quality. If it is too wide, you may sound overly dramatic. You should control your pitch so
that your listeners believe you are talking with them rather than performing in front of them. Once again, your involvement in your message should take care of this naturally for you. When considering volume, rate, and pitch, keep emphasis in mind. You have to use a variety of vocal characteristics to maintain audience interest, but remember that a
change in volume, pitch, or rate will result in emphasis. If you pause or speed up, your rate will suggest emphasis. Words you whisper or scream will be emphasized by their volume. One student provided an example of how volume can be used to emphasize an idea. He was speaking on the way possessions like cars communicate things about their
owners. "For example," he said, with normal volume, "a Cadillac says, 'I've got money!' "He blared out those last three words with such force the podium shook. ARTICULATION The final auditory nonverbal behavior, articulation, is perhaps the most important. For our purposes here, articulation means
pronouncing all the parts of all the parts of all the necessary words and nothing else. It is not our purpose to condemn regional dialects within this discussion. It is true that a considerable amount of research suggests that regional dialects within this discussion. It is rot our purpose to condemn regional dialects within this discussion. It is rot our purpose to condemn regional dialects within this discussion. It is rot our purpose to condemn regional dialects within this discussion. It is rot our purpose to condemn regional dialects within this discussion. It is rot our purpose to condemn regional dialects within this discussion. It is rot our purpose to condemn regional dialects within this discussion. It is rot our purpose to condemn regional dialects within this discussion.
articulation is usually nothing more than careless articulation, (2) replacing parts of words (deletion), (2) replacing parts of words (substitution), (3) adding parts of words (substitution), (4) overlapping two or more words (substitution), (5) adding parts of words (substitution), (6) adding parts of words (substitution), (7) replacing parts of words (substitution), (8) adding parts of words (substitution), (9) replacing parts of words (substitution), (1) replacing parts of words (substitution), (1) replacing parts of words (substitution), (1) replacing parts of words (substitution), (2) replacing parts of words (substitution), (3) adding parts of words (substitution), (4) replacing parts of words (substitution), (5) replacing parts of words (substitution), (6) replacing parts of words (substitution), (7) replacing parts of words (substitution), (8) replacing parts of words (substitution), (8) replacing parts of words (substitution), (9) replacing parts of words (substitution), (1) replacing parts of words (substitution), (1) replacing parts of words (substitution), (1) replacing parts of words (substitution), (2) replacing parts of words (substitution), (3) replacing parts of words (substitution), (4) replacing parts of words (substitution), (5) replacing parts of words (substitution), (6) replacing parts of words (substitution), (6) replacing parts of words (substitution), (6) replacing parts of words (substitution), (7) replacing parts of words (substitution), (8) replacing p
thinking the complete word, it is often difficult to recognize that you are saying only part of it. The most common deletions occur at the ends of words, especially -ing words. Going, doing, and stopping become goin', doin', and stopping become goin'.
Substitution Substitution takes place when you replace part of a word with an incorrect sound. The ending -th is often replaced at the beginning of words, as this, that, and those have a tendency to become dis, dat, and dose. (This tendency is especially
prevalent in many parts of the northeastern United States.) A vessel is known by the sound, whether it be cracked or not. Demosthenes Addition The articulation problem of addition is caused by adding extra parts to words, such as incentative instead of incentive, athalete instead of athlete, and orientated instead of oriented. Sometimes this type of
addition is caused by incorrect word choice, as when irregardless is used for regardless. 386-403 Ch12 Adler 2/28/05 10:01 AM Page 399 CHAPTER 12 PRESENTING YOUR MESSAGE 399 UNDERSTANDING DIVERSITY A COMPENDIUM OF AMERICAN DIALECTS The following is a short glossary of examples of regionalized pronunciation (with
apologies to all residents who find them exaggerated). Appalachian Hill Country Bile To bring water to 212 degrees Cowcumber Vittle you make pickles out of Hern Not his'n Tard Exhausted Philadelphia Fluffya The name of the city Mayan Opposite of yours Pork A wooded recreational area Tail What you use to dry off with after a shower
Bawlamerese (Spoken around Baltimore) Arn What you do with an arnin board Blow Opposite of above Pleece Two or more po-leece Torst Tourist Southern Abode A plank of wood Bidness Such as, "Mistah Cottah's paynut bidness" Shurf Local law enforcement officer Watt The color of the Watt House in Wushinton Boston Back The outer covering of a
tree trunk Had licka Hard liquor Moa Opposite of less Pahk To leave your car somewhere, as in "Pahk the cah in Haavaad Yahd" Texas Ah stay Iced tea Bayer A beverage made from hops Pars A town in Texas. Also, the capital of France Awful Tar Famous tall structure in Pars, France Noo Yorkese Huh Opposite of him Mel pew? May I help you? Reg
you la caw fee Coffee with milk and sugar Pock A place with trees and muggers Other interesting regionalisms can be found at the Slanguistics Web site, www.slanguage.com. Another type of addition is the use of "tag questions," such as you know? or you see? or right? at the end of sentences. To have every other sentence punctuated with one of
these barely audible superfluous phrases can be annoying. Probably the worst type of addition, or at least the most common, is the use of uh and between two words when and isn't even needed. If you find yourself doing that, you might want just to pause or swallow instead. 19 Slurring Slurring is caused by
trying to say two or more words at once—or at least overlapping the end of one word with the beginning of the next. Word pairs ending with to are often slurred, as when want to becomes wanna.
Sometimes even more than two words are blended together, as when that is the way becomes thatsaway. Careful articulation means using your lips, teeth, tongue, and jaw to bite off your words, cleanly and separately, one at a time. Mend your speech a little, lest you may mar your fortune. Shakespeare King Lear 386-403_Ch12_Adler 400 2/28/05 PART
FOUR 10:01 AM Page 400 PUBLIC COMMUNICATION UNDERSTANDING COMMUNICATION TECHNOLOGY HISTORIC SPEECHES ON THE WEB "Streaming technology" enables you to listen to audio programming and watch video programming over the World Wide Web. This means that you can hear how speeches from history—at least
twentieth-century history, since recording technology has been available—actually sounded. You can hear how speakers handled auditory nonverbal characteristics such as volume, rate, pitch, and articulation. When video clips are available, you can even observe how they handled the visual aspects of delivery discussed in this chapter. PBS has a site
devoted to the world's great speeches at www.pbs.org/greatspeeches/timeline/. You can hear speeches such as Franklin D. Roosevelt's "War Message" (1941), Dr. Martin Luther King's "I Have a Dream" (1963), John F. Kennedy's inaugural speech (1962), Nixon's "Checkers Speech" (1952), and General Douglas MacArthur's "Old Soldiers Never Die"
speech (1951). The History Channel has a similar site at www.historychannel.com/speeches/, featuring a vast collection drawn from the most famous broadcasts and recordings of the twentieth century, organized into various categories, including War and Diplomacy (you can hear Hitler, following his occupation of Czechoslovakia in 1938, proclaim
that "We now have arms to such an extent as the world has never seen before"); Science and Technology (with Amelia Earhart celebrating her solo trans-Atlantic flight in 1939); and Arts, Entertainment, and Culture (with Lou Gehrig saying farewell to baseball in 1939 and Gloria Steinem addressing the National Women's Political Caucus in 1971).
You'll need a player loaded onto your computer, such as RealPlayer from RealNetworks or Windows Media Player from Microsoft, which is part of Microsoft's Internet Explorer Web browser. If you don't have a player, the software can be downloaded from the Web free of charge (www.real.com or
www.microsoft.com/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/windows/wind
should strive to make this criticism constructive, which means that it will be designed to help the speaker improve. To be constructive, we mean that you should present it with the positive attitude mentioned earlier. The easiest way to do that is to point
out what is right about the speech as well as what is wrong about it. In fact, negative criticism is often useless because the speaker might become defensive and block out your criticism is often useless because the speaker might become defensive and block out your criticism is often useless because the speaker might become defensive and block out your criticism is often useless because the speaker might become defensive and block out your criticism is often useless because the speaker might become defensive and block out your criticism is often useless because the speaker might become defensive and block out your criticism is often useless because the speaker might become defensive and block out your criticism is often useless because the speaker might become defensive and block out your criticism is often useless because the speaker might become defensive and block out your criticism is often useless because the speaker might become defensive and block out your criticism is often useless because the speaker might become defensive and block out your criticism is often useless because the speaker might become defensive and block out your criticism is often useless because the speaker might become defensive and block out your criticism is often useless because the speaker might be a sp

For
example, rather than saying, "Your ideas about the psychological aspects of diabetes were completely unclear and unsupported," you might say, "I found your explanation of the psychological aspects of diabetes to be clearly stated and well backed up with details and examples. However, your explanation of the psychological aspects of the disease left me a
little confused. It might be my own fault, but it just did not seem to be as well supported as the rest of your speech." When we say that criticism has to be substantive, we mean two things: First, you need to criticize what was said as well as how it was said. Do not concentrate on delivery traits to the point where you lose track of the speaker's
ideas. Second, you need to be specific. Rather than saying, "I liked this" or "I didn't like that," you should provide a detailed explanation of your reasons for liking or disliking parts of the speech. SUMMARY One of the most serious delivery problems is debilitative (as opposed to facilitative) stage fright. Sources of debilitative stage fright include
irrational thinking, which might include a belief in one or more of the fallacy of catastrophic failure (something is going to ruin this presentation), the fallacy of perfection (a good speaker never does anything wrong), the fallacy of absolute approval (everyone has to like you), and the fallacy of overgeneralization (you always
mess up speeches). There are several methods of overcoming speech anxiety. The first is to remember that nervousness is natural, and use it to your advantage. The others include being rational, receiver oriented, positive, and prepared. There are four types of delivery: extemporaneous, impromptu, manuscript, and memorized. In each type, the speaker
must be concerned with both visual and auditory aspects include appearance, movement, posture, facial expression, and eye contact. Auditory aspects include appearance, movement, posture, facial expression, and eye contact. Auditory aspects include appearance, movement, posture, facial expression, and eye contact. Auditory aspects include appearance, movement, posture, facial expression, and eye contact.
delivery is aided through the constructive criticism of speeches presented in class. Your criticism should address what was said as well as how it was said, and it should be specific in terms of what you liked and didn't like
about the speech. KEY TERMS addition 398 debilitative stage fright 388 fallacy of overgeneralization 398 debilitative stage fright 388 fallacy of overgeneralization 398 debilitative stage fright 388 fallacy of overgeneralization 398 debilitative stage fright 389 manuscript speeches 393

Sagan, starring Jodie Foster, directed by Robert Zemeckis. The title has multiple meanings—the main one being a scientist's contact with a number of audiences, including a pitch session before a foundation board,
testimony before Congress, and a lecture to a group of school children. PRESENTING YOUR MESSAGE 403 Four Weddings and a Funeral (1995). Rated PG. Hugh Grant's breakthrough film is a catalog of social events that also happen to be speaking events. Delivery styles alter the effectiveness of the speeches considerably. For example, Grant
"roasts" the groom at the first wedding with great success. At the second wedding one of his friends tries to imitate his style and fails miserably. Saving Private Ryan (1998). Rated R. Tom Hanks's nerves are shot, but he still manages a speech that rallies his men for a mission no one believes in at first. 404-425 Ch13 Adler 3/1/05 8:01 AM Page 4040 and fails miserably.
AFTER STUDYING THE MATERIAL IN THIS CHAPTER . . . You should understand: 1. The difference between an informative purpose. 3. The importance of generating information hunger. 4. The importance of using clear language. 5. The importance of generating
audience involvement. You should be able to: 1. Formulate an effective information hunger by stressing the relevance of your material to your listeners' needs. 3. Use the strategies outlined in this chapter to organize unfamiliar information in an understandable manner. 4. Emphasize important points in your
speech. 5. Generate audience involvement. 404-425 Ch13 Adler 3/1/05 8:01 AM Page 405 CHAPTER HIGHLIGHTS There are several techniques that help make informative speaking more effective: 

By content Define a specific informative purpose pu

    ■ Create information hunger
    ■ Make it easy to listen
    ■ Emphasize important points
    ■ Use clear organization and structure
    ■ Use supporting material effectively
    ■ Make it easy to listen
    ■ Emphasize important points
    ■ Use clear, simple language
    ■ Generate audience involvement There are two primary differences between informative and persuasive speaking:

noncontroversial The informative speaker does not intend to change audience attitudes CHAPTER THIRTEEN Informative Speaking 406 3/1/05 PART FOUR 8:01 AM PUBLIC COMMUNICATION CULTURAL IDIOM rain down on: fall like rain, overwhelm If we can't survive all the informative speaker does not intend to change audience attitudes CHAPTER THIRTEEN Informative Speaking 406 3/1/05 PART FOUR 8:01 AM PUBLIC COMMUNICATION CULTURAL IDIOM rain down on: fall like rain, overwhelm If we can't survive all the informative speaker does not intend to change audience attitudes CHAPTER THIRTEEN Informative speaking 406 3/1/05 PART FOUR 8:01 AM PUBLIC COMMUNICATION CULTURAL IDIOM rain down on: fall like rain, overwhelm If we can't survive all the informative speaker does not intend to change audience attitudes CHAPTER THIRTEEN Informative speaking 406 3/1/05 PART FOUR 8:01 AM PUBLIC COMMUNICATION CULTURAL IDIOM rain down on: fall like rain, overwhelm If we can't survive all the informative speaker does not intend to change audience attitudes CHAPTER THIRTEEN Informative speaker does not intend to change audience attitudes CHAPTER THIRTEEN Informative speaker does not intend to change audience attitudes CHAPTER THIRTEEN Informative speaker does not intend to change attitude attitu
Because no one is going to stop writing books. No one is going to stop developing information. Brian Lamb Page 406 Some people call it the age of information age."1 There are, in fact, a hundred names for it, but they al
deal with the same idea: there is just too much information around. One edition of the New York Times contains more information than the paper edition—and that online edition is just one of
millions of Web sites that everyone has access to. Add to that all the books, magazines, television shows, and "information glut" becomes an understatement. Social scientists tell us that the information glut leads to information overload, which is a form of
psychological stress that occurs when people become confused and have trouble sorting through all the information that is available to them. Some experts use another term, information anxiety, for the same phenomenon. Because of this, the information anxiety speaker's responsibility is not just to provide new information. Information that is available to them.
done effectively—seeks to relieve information overload by turning information into knowledge for an audience. Information is the raw materials, the contradicting facts and competing claims that rain down on public consciousness. Knowledge is what you get when you are able to make sense of and use those raw materials. Effective public speakers
make information into knowledge by reaching small audience and see if they are "getting it." If they aren't, the speaker can adjust the message and work with the audience until they do. Source: © The New Yorker Collection 1987 James
Stevenson from cartoonbank.com. All Rights Reserved. 404-425 Ch13 Adler 3/1/05 8:01 AM Page 407 CHAPTER 13 Information of how to keep your car from breaking down. You engage in this type of speaking frequently whether you
realize it or not. Sometimes it is formal, as when you give a report in class. At other times, it is more casual, as when you tell a friend how to prepare your favorite dish. The main objective of this chapter is to give you the skills you need to enhance all of your informative speaking. TYPES OF INFORMATIVE SPEAKING There are several types of
informative speaking. The primary types have to do with the content and purpose of the speech. By Content Informative speech is about anything that is tangible (that is, capable of being seen or touched)
Speeches about objects might include an appreciation of the Grand Canyon (or any other product). SPEECHES ABOUT PROCESSES A process of learning to juggle, or
the process of breaking into the accounting business, you would be giving this type of speech. SPEECHES ABOUT EVENTS You would be giving this type of informative speech if your topic dealt with anything notable that happened, was happening, or might happened, was happening, or might happened, was happening, or might happened, was happened, which happened, was happened, which happened, was happened, which happened, was happened, which happened, which happened, which happened, which happened, which happened, which ha
winning the championship. SPEECHES ABOUT CONCEPTS Concepts include intangible ideas, such as beliefs, theories, ideas, and principles. If you gave an informative speech about postmodernism, vegetarianism, or any other "ism," you would be giving this type of speech. Other topics would include everything from New Age religions to theories
about extraterrestrial life to rules for making millions of dollars. By Purpose We also distinguish among types of informative speeches depending upon the speaker's purpose. We ask, "Does the speaker seek to describe, explain, or instruct?" DESCRIPTIONS A speech of description is the most straightforward type of informative speech. With your
audience analysis in mind, you generally divide this type of speech into the components of the thing you are describing. You might describe what a career in nursing would be like. Whatever its topic, the speech of description builds a "word picture" of the essential details that make that
thing what it is. INFORMATIVE SPEAKING An individual without information cannot take responsibility. Jan Carlzon 407 404-425_Ch13 Adler 408 3/1/05 PART FOUR 8:01 AM Page 408 PUBLIC COMMUNICATION EXPLANATIONS Explanations clarify ideas and concepts that are already known but not understood by an audience. For example, your
audience members might already know that a U.S.national debt exists, but they might be baffled by the reasons why it has become so large. Explanations often deal with the question of why. Why do we have a national debt? Why do we have to wait until the age of twentyone to drink legally? Why did tuition need to be increased this semester?
INSTRUCTIONS Instructions teach something to the audience in a logical, stepby-step manner. They are the basis of training programs and orientations. They often deal with the question of how to prepare for a job interview. This type of speech often features a demonstration
or a visual aid. Thus, if you were giving instructions on "The Perfect Golf Swing," you might demonstrate with your own club and/or use a mechanical model to show the physics involved. For instructions on "How to Perform CPR," you could use a wolunteer or a dummy. These types of informative speeches aren't mutually exclusive. There is
considerable overlap, as when you give a speech about objects that has the purpose of explaining them. Still, even this imperfect categorization demonstrates how wide a range of informative and a persuasive speech topic. INFORMATIVE
VERSUS PERSUASIVE TOPICS There are many similarities between an informative speech, you are constantly trying to "persuade" your avdience about your arguments, your evidence, and so on. However
two basic characteristics differentiate an informative topic from a persuasive topic. An Informative topic Tends to Be Noncontroversial In an informative speech, you generally do not present informative topic. An Informative topic Tends to Be Noncontroversial In an informative topic.
traditional Chinese medicine, simply describing what its practitioners believe and do. By contrast, a talk either boosting or criticizing traditional Chinese medicine would clearly be persuasive. The noncontroversial nature of informative speaking does not mean that your speech topic should be uninteresting to your audience, but rather that your
approach to it should not engender conflict. You could speak about the animal rights movement, for example, by explaining the points of view of both sides in an interesting but objective manner. The Informative Speaker Does Not Intend to Change Audience Attitudes The informative speaker does seek a response (such as attention and interest) from
the listener and does try to make the topic important to the audience. But the speaker's primary intent is not to change attitudes or to make the audience members feel differently about the topic. For example, an informative speaker might explain how a microwave oven works but will not try to "sell" a specific brand of oven to the audience. 404
425_Ch13_Adler 3/1/05 8:01 AM Page 409 CHAPTER 13 INFORMATIVE SPEAKING 409 UNDERSTANDING DIVERSITY HOW CULTURE AFFECTS INFORMATION Cultural background is always a part of informative speaking, although it's not always easy to spot. Sometimes this is because of ethnocentrism, the belief in the inherent superiority of
one's own ethnic group or culture. According to Larry Samovar and Richard Porter, authors of Communication between Cultures, ethnocentrism is exemplified by what is taught in schools. Each culture, whether consciously or unconsciously or uncons
accomplishments of other cultures. In this way, schools in all cultures, whether they intend to or not, teach ethnocentrism. For instance, the next time you look at a world map, notice that the United States is prominently located in the center—unless, of course, you are looking at a Chinese or Russian map. Many students in the United States, if asked
to identify the great books of the world, would likely produce a list of books mainly by Western, white, male authors. This attitude of subtle ethnocentrism, or the reinforcing of the values, beliefs, and prejudices of the culture, is not a uniquely American phenomenon. Studying only the Koran in Iranian schools or only the Old Testament in Israeli
classrooms is also a quiet form of ethnocentrism. From Larry Samovar and Richard Porter, Communication between Cultures, 5th ed., © 2004. Reprinted with permission of Wadsworth, an imprint of the Wadsworth Group, a division of Thomson Learning. The speaker's intent is best expressed in a specific informative purpose statement, which brings
us to the first of our techniques of informative speaking. TECHNIQUES OF INFORMATIVE SPEAKING The techniques of informative speaking are based on a number of principles to apply to informative
speaking include those that help an audience understand and care about your speech. Let's look at the way these principles apply to specific techniques. As Chapter 10 explained, any speech must be based on a purpose statement that is audience oriented, precise, and attainable. When you are preparing an informative speech, it is especially
important to define in advance, for yourself, a clear informative purpose. An informative purpose statement will generally be worded to stress audience knowledge, ability, or both: After listening to my speech, my audience will be able to recall the three most important questions to ask when shopping for a digital video recorder. After listening to my
speech, my audience will be able to identify the four basic principles of aerodynamics. After listening to my speech, my audience will be able to discuss the idea of dramatic structure. Source: © 2000 Leo Cullum from the cartoonbank.com. All Rights Reserved. Define a Specific Informative Purpose 404-425 Ch13 Adler 410 3/1/05 PART FOUR 8:01 AM
Page 410 PUBLIC COMMUNICATION Notice that in each of these purpose statements a specific verb such as to recall, to identify, or to discuss points out what the audience will be able to do after hearing the speech. Other key verbs for informative purpose statements include these: Accomplish Analyze Apply Choose Contrast Describe Explain
Integrate List Name Operate Perform Recognize Review Summarize A clear purpose statement will lead to a clear thesis statement for an informative speech will just preview the central idea: Digital video recorders such
as TiVo have so many features that it is difficult for the uninformed consumer to make a choice. Understanding the laws of aerodynamics could help save your life some day. Every effective form of storytelling conforms to the rules of dramatic structure. At other times, the thesis statement for an informative speech will delineate the main points of that
speech: When shopping for a digital video recorder, the informed consumer seeks to balance price, dependability, and user friendliness. The four basic principles of aerodynamics—lift, thrust, drag, and gravity—make it clear how an airplane flies. Five components of dramatic structure—conflict, rising tension, climax, resolution, and denouement—are
found in every effective form of storytelling. Setting a clear information your next step is to give your next step is to give your audience a purpose in listening. Create Information Hunger Information's pretty thin stuff, unless mixed with experience. Clarence
Day An effective informative speech creates information hunger: a reason for your audience members to want to listen to and learn from your speech. The most effective way to do that is to respond in some way to their psychological needs. To do so, you can use the analysis of communication functions discussed in Chapter 1 (pages 9-11) as a
guide. You read there that communication of all types helps us meet our physical needs, identity needs, social needs. In informative speaking, you could tap into your audience members' physical needs by relating your topic to their survival or to the improvement of their living conditions. If you gave a speech on food (eating it, cooking it, cooking it, cooking it, cooking it.)
it, or shopping for it), you would be dealing with that basic need. If you gave a speech on water pollution, you could appeal to identity needs by showing your audience members how to be ealing with that basic need. If you gave a speech on water pollution, you could do to a human body. In the same way, you could appeal to identity needs by showing your audience members how to be ealing with that basic need. If you gave a speech on water pollution, you could appeal to identity needs by showing your audience members how to be a human body. In the same way, you could appeal to identity needs by showing your audience members how to be a human body. In the same way, you could appeal to identity needs by showing your audience members how to be a human body. In the same way, you could appeal to identity needs by showing your audience members how to be a human body. In the same way, you could appeal to identity needs by showing your audience members how to be a human body. In the same way, you could appeal to identity needs by showing your audience members how to be a human body. In the same way, you could appeal to identity needs by showing your audience members how to be a human body. In the same way, you could appeal to identity needs by showing your audience members how to be a human body. In the same way, you could appeal to identity needs a human body. In the same way, you could appeal to identity needs a human body. In the same way, you could appeal to identity needs a human body. In the same way, you could appeal to identity needs a human body. In the same way, you could appeal to identity needs a human body. In the same way, you could appeal to identity needs a human body. In the same way, you could need a human body. In the same way, you could need a human body. In the same way, you could need a human body. In the same way, you could need a human body. In the same way, you could need a human body. In the same way, you could need a human body. In the same way, you could need a human body. In the same way, you 
respected—or simply by showing them that you respect them. You could relate to social needs by telling your audience members how to succeed in their courses, their job search, or their quest for the perfect outfit. 404-
425 Ch13 Adler 3/1/05 8:01 AM Page 411 CHAPTER 13 CRITICAL THINKING PROBE AUDIENCE NEEDS AND INFORMATION HUNGER INFORMATIVE SPEAKING 411 Think about informative messages you receive, either from your professors or from other speakers. How closely do they connect with your needs? Can you provide an example of
how even apparently unconnected topics can be linked to your needs by effective speakers? Make It Easy to Listen Remember the complex nature of listening discussed in Chapter 4, and make it easy for your audience members to hear, pay attention, understand, and remember. This means first that you should speak clearly and with enough volume to
be heard by all your listeners. It also means that as you put your speech together you should take into consideration those techniques that recognize the way human beings process information. For example: We know more than we can tell. Michael Polanyi LIMIT THE AMOUNT OF INFORMATION YOU PRESENT Remember that you have become an
expert on this topic and that you won't be able to transmit everything you know to your audience at one sitting. It's better to make careful choices about the three to five main ideas you want to get across and then develop those ideas fully. Remember, too much information leads to overload, anxiety, and a lack of attention on the part of your audience
USE FAMILIAR INFORMATION TO INCREASE UNDERSTANDING OF THE UNFAMILIAR Move your audience members from information. For example, if you are giving a speech about how the stock market works, you could compare the daily
activity of a broker with that of a salesperson in a retail store, or you could compare the idea of capital growth (a more familiar concept). USE SIMPLE INFORMATION TO BUILD UP UNDERSTANDING OF COMPLEX INFORMATION Just as you move your audience members
from the familiar to the unfamiliar, you can move them from the simple to the complex. An average college audience, for example, can understand the complexities of genetic modification if you begin with the concept of inherited characteristics. ETHICAL CHALLENGE THE ETHICS OF SIMPLICITY Often, persuasive speakers use language that is
purposely complicated or obscure in order to keep the audience uninformed about some idea or information. Informative rather than persuasive intent can often help clear the air. Find any sales message (a print ad or television commercial, for example) or political message (a print ad or television commercial, for example) and see if you can transform it into an
informative speech. What are the differences? Emphasize Important Points Along with defining a specific informative purpose and creating informative purpose and crea
CULTURAL IDIOM run a point into the ground: over-elaboration of an idea to the point where the audience is tired of hearing about it ironclad: meant to be followed very specifically REPETITION Repetition is one of the age-old rules of learning. Human beings are simply more likely to comprehend information that is stated more than once. This is
especially true in a speaking situation, because, unlike in writing, your audience members cannot go back to pick up something they just might pick it up the second time. Of course, simply repeating something they have missed. If their minds have wandered the first time you say something in the same words might bore the audience members whose members who is a speaking situation, because, unlike in writing, your audience members who is a speaking situation, because, unlike in writing, your audience members who is a speaking situation, because, unlike in writing, your audience members who is a speaking situation, because, unlike in writing, your audience members who is a speaking situation, because, unlike in writing, your audience members who is a speaking situation, because, unlike in writing, your audience members who is a speaking situation, because, unlike in writing, your audience members who is a speaking situation, and is a speaking situation, and is a speaking situation with a speaking situation, and is a speaking situation with a spea
actually are paying attention, so effective speakers learn to say the same thing in more than one way. Kathy Levine, a student at Oregon State University, used this technique in her speech on contaminated dental water: The problem of dirty dental water is widespread. In a nationwide 20/20 investigation, the water used in approximately 90% of dental
offices is dirtier than the water found in public toilets. This means that 9 out of 10 dental offices are using dirty water on their patients. 3 Redundancy can be effective when you use it to emphasize important points or (2) you run an important point into the
ground. There is no sure rule for making certain you have not overemphasized a point. You just have to use your best judgment to make sure that you have stated the point enough that your audience members get it without repeating it so often that they want to give it back. SIGNPOSTS Another way to emphasize important material is by using
signposts: words or phrases that emphasize the important," or you can use some variation of that statement: "But listen to this . . .," or "The most important thing to remember is . . .," or "The three keys to this situation are . . .," and so on. Use a Clear
Organization and Structure Because of the way humans process information (that is, in a limited number of chunks at any one time), 5 organization is extremely important in an informative speeches they are ironclad. Chapter 11 discusses some of
these rules: Limit your speech to three to five main points. Divide, coordinate, and order those main points. Use a strong introduction that previews your ideas. Use a conclusion that previews your ideas and makes them memorable. Use transitions, internal summaries, and internal previews. If you have an important point to make, don't try to be subtle
or clever. Use a pile driver. Hit the point once. Then come back and hit it again. Then hit it a third time—a tremendous whack. Winston Churchill The repetition that is inherent in strong organization will be especially true if you use a well-organized introduction, body, and
conclusion. THE INTRODUCTION The following principles of organization from Chapter 11 become especially important in the introduction of an informative speech: 1. Establish the importance of your topic to your audience. 2. Preview the thesis, the one central idea you want your audience to remember. 3. Preview your main points. 404-
425 Ch13 Adler 3/1/05 8:01 AM Page 413 CHAPTER 13 For example, Sheena Holliday of Alderson-Broaddus College in West Virginia began her speech on toxic mold with the following introduction: Headaches, fatigue, dizziness and memory impairment seem like ailments that each person in this room had had at one point, right? You stay up late
cramming for an exam. The next day, you are fatigued, dizzy, and cannot remember the answers. A college professor has problems with fatigue and a little dizziness. You must be working long hours. Symptoms can just pass, but what if you had to live with them for the rest of your life? The ailments can progress into asthma, movement disorder
 "The Fatal Four Indoor Air Pollutants" in Pediatric Annals, June 2000, states that during the energy crisis of the 1970s, Americans began building more airtight homes, increased their use of indoor space heaters, and opened fewer windows for ventilation. This caused moisture to be trapped behind walls, floors, and ceilings. Toxic mold needs a wet
climate to survive, reproduce, and spread its deadly spores. The toxiqenic molds thrive in places that have severe water damage, from a leaky roof or wall, to busted water lines. Molds then receive nutrients from cellulose, which is found in wallpaper, wood, newspaper, or cardboard. THE CONCLUSION Organizational principles are also important in
got from staying up too late, but maybe they are happening too often. Maybe you are a victim INFORMATIVE SPEAKING 413 404-425_Ch13_Adler 414 3/1/05 PART FOUR 8:01 AM Page 414 PUBLIC COMMUNICATION of household mold. If so, now you know what it is, what the symptoms are, and what you can do to protect yourself and your home
from being invaded. Do not let this uninvited visitor ruin your life! 8 Use Supporting Material Effectively Another technique for effective informative speaking has to do with the supporting material discussed in Chapter 11. Three of the purposes of support (to clarify, to make interesting, and to make memorable) are essential to informative
toxic mold looks like, along with charts listing its causes and dangers, to increase audience comprehension. You should also try to briefly explain where your supporting material came from. These vocal citations build the credibility of your explanations and increase audience trust in the accuracy of what you are saying. For example, when Chad
Hampton of William Carey College gave his informative speech on a particular type of artificial heart, he had this to say about an earlier model: The Jarvik 7 was the first artificial heart to hit the medical scene in the 1980s. According to Dr. Leo Shields, a medical researcher at Harvard, the Jarvik did not allow the patient to lead a normal life. The
of this device was credible. Use Clear, Simple Language Another technique for effective informative speaking is to use clear language—which means using precise, simple wording and avoiding jargon. Dictionaries and thesauri are handy tools for picking precise, simple wording and avoiding jargon. Dictionaries and thesauri are handy tools for picking precise, simple wording and avoiding jargon. Dictionaries and thesauri are handy tools for picking precise, simple wording and avoiding jargon. Dictionaries and thesauri are handy tools for picking precise, simple wording and avoiding jargon. under "tools/language" tab of most word processing programs can be consulted easily as you plan your speech. You should remember, though, that is unfamiliar to your audience. In fact, just the opposite is true. Important ideas do not have to sound complicated. Along with
why Harvard researchers called the old pyramid a "license to overeat" (NPR 2002) and why the November 22, 2002, National Post reported that if the food pyramid were revised, "it would significantly reduce the number of people dying from heart attacks, strokes and other chronic diseases," let's begin with an informative appetizer and a look at the
www.fedstats.gov Census Bureau: www.census.gov Bureau of Labor Statistics: For bills, laws, and other governmental actions, consult Thomas: A site maintained by the Library of Congress that includes a wide range of legislative information. Finally, a favorite site for newspaper and magazine articles: American Rhetoric Web Site: A database of
more than 5,000 full text, audio, and video versions of public speeches, an index to the 100 most significant American political speeches of the twentieth century, and a collection of over 50 Hollywood movie speeches. www.gebbieinc.com The Gebbie Press All-In-One Media Directory allows you to search hundreds of daily newspapers by state or
magazines by topic. There are hundreds of links that lead you to the Web site of the paper or magazine of your choice. Jaci's vocabulary choices are interesting and clear, but this statement could be improved by simplifying the sentence structure: To understand why Harvard researchers believe the new pyramid is healthier for you than the old one,
we will begin with an informative appetizer and a look at the new pyramid. The additional information could then be explained in separate sentences later in the speech. Generate sentences later in the speech. Generate sentences later in the speech and informative speaking is to get your audience involved in your speech. Audience involvement is the level of
commitment and attention that listeners devote to a speech. Educational psychologists have long known that the best way to teach people something is to have them do it; social psychologists have added to this rule by proving, in many studies, that involvement in a message increases audience comprehension of, and agreement with, that message
There are many ways to encourage audience involvement in your speech. One way is by following the rules for good delivery by maintaining enthusiasm, energy, eye contact, and so on. Other ways include personalizing your speech, using 415 404-425_Ch13 Adler 416 3/1/05 PART FOUR 8:01 AM PUBLIC COMMUNICATION The best way to send
information is to wrap it up in a person. J. Robert Oppenheimer Page 416 audience members a human being to connect to. In other words, don't be afraid to be yourself and to inject
a little of your own personality into the speech. If you happen to be good at storytelling, make a narration part of your speech. If you have any experience that relates to your topic, use it. USE AUDIENCE PARTICIPATION Audience participation, having your topic, show it.
listeners actually do something during your speech, is another way to increase their involvement in your message. For example, if you were giving a demonstration on isometric exercises (which don't require too much room for movement), you could have the entire audience stand up and do one or two sample exercises. (Exercise not only involves
audience members psychologically, but also keeps them more alert physically by increasing the flow of blood and adrenaline in their systems.) If you were explaining how to fill out as you explain it. Outlines and checklists can be used in a similar manner for just
30 days—and that you have registered. But it hasn't always been that way. Americans have had to struggle for the right to vote. I'd like to illustrate this by asking everyone to please stand. [Wait, prod class to stand.] I'm going to ask some questions. If you answer no to any question, please sit down. Do you have five extra dollars in your pocket right to vote. I'd like to illustrate this by asking everyone to please stand.
now? If not, sit down. Up until 1964, poll taxes existed in many states. Have you resided at the same address for at least one year? If not, sit down. The 15th Amendment gave non-white? VOLUNTEERS If the action you are demonstrating is too expensive or intricate to allow all the class members to take part, you can select one or two volunteers from the audience to help you out. You will increase the psychological involvement of all the members, because they will tend to identify with the volunteers from the audience to help you out. You will increase the psychological involvement of all the members, because they will tend to identify with the volunteers.
AM Page 417 CHAPTER 13 INFORMATIVE SPEAKING 417 Source: "Rubes" by Leigh Rubin. By permission of Leigh Rubin and Creators Syndicate. HAVE A QUESTION-AND-ANSWER PERIOD One way to increase audience involvement that is nearly always appropriate if time allows is to answer questions at the end of your speech. You should
encourage your audience to ask questions. Solicit questions and be patient waiting for the first one. Often no one wants to ask the first questions might increase your effectiveness in answering them: 1. Listen to the substance of the questions. Don't zero in on irrelevant details; listen for
the big picture—the basic, overall question that is being asked. If you are not really sure what the substance of a question is, ask the questioner to paraphrase it. Don't be afraid to let the questioners do their share of the work. 2. Paraphrase it. Don't be afraid to let the questioners do their share of the work. 2. Paraphrase it. Don't be afraid to let the questioners do their share of the work. 2. Paraphrase it. Don't be afraid to let the questioners do their share of the work. 2. Paraphrase it. Don't be afraid to let the question in the paraphrase it. Don't be afraid to let the question it.
just a few words: "If I understand your question, you are asking. Is that right?" 3. Avoid defensive reactions to questions. Even if the question and not to the possible personality attack. 4. Answer the question as briefly as possible. Then check the
questioner's comprehension of your answer. Sometimes you can simply check his or her nonverbal response—if he or she seems at all confused, you can ask, "Does that answer your question?" CRITICAL THINKING PROBE ANALYZING AN INFORMATIVE MESSAGE Select an informative message from a textbook, an encyclopedia, an instruction
manual, or a Web site. Analyze the message in terms of its effectiveness, pointing out where the source used effective techniques are still needed, making specific suggestions for improvement. Finally, comment on the changes that would be necessary if the
message was presented as a speech. SAMPLE SPEECH The sample speech for this chapter was presented by Jaci Devine, a student at Truman State University in Missouri. She competed with it in speech tournaments and was a quarterfinalist at the National Forensics Association national tournament in April 2003 at Ball State University. Her coach
                                                                                                                                                                                                                             What did you especially like?
audience? preview thesis? preview main points? Did the body of the speech- contain three to five main points? contain three to five main points? remind audience members of the importance of the topic to
them? provide the audience with a memory aid? Was supporting material used effectively? Was the language clear? Did the speaker seek to involve the audience? Figure 13-1 Evaluation Form for an Informative Speech. Every instructor stresses different factors, so your form may vary. Jaci chose a topic that was difficult to present as purely
informative, since the new pyramid was designed by experts as a true improvement over the old one. Jaci explained it this way: This speech had the potential to be persuasive in nature because of the inherent contrasts and comparisons between the Healthy Eating pyramid and the USDA's food pyramid. I could have chosen to argue in favor of one
pyramid over the other, but I thought the topic was better suited for an informative speech so the audience could make their own judgments and decisions. To do that, it was important for me to remain neutral and explore the positive and negative aspects of both pyramids so each one was presented fairly. 11 She uses several interesting signposts
 along the way, in the form of food metaphors—offering us "informative appetizers," a "trip to the buffet" of implica- 404-425_Ch13_Adler 3/1/05 8:01 AM Page 419 CHAPTER 13 tions, and so on. She also compares food pyramids to further personalize the speech. Jaci's informative purpose might be worded like this: After
listening to my speech, my audience will understand the differences between, and the advantages of, the old and new food pyramids. Her thesis statement could be worded as follows: There are pros and cons to both the old food pyramid and the new "healthy eating" food pyramid. The organization and structure of her speech can

American (December 15, 2002). PYRAMIDS OF HEALTH Her introduction raises audience interest and also introduces her comparisons to real, sand-and-block pyramids. A concise statement of the main idea of her speech. The first
sentence is somewhat complex, and might initially confuse the audience. Jaci works her metaphors into transitions, which recapture the audience's attention as she moves into a new point. This is the transition to the first main point. A concise and clearly worded summary of the history of government guidelines. She builds the credibility of her
supporting material by concisely citing where it came from. Jaci Devine 1 The pyramids of Egypt rise above the Giza Plateau and represent technology and manpower that were way ahead of their time. But if you ask any thirdgrader, you'd probably hear more about a different kind of pyramid, one whose blocks are not made of stone and whose
contents are not dead Egyptian rulers: the food pyramid. 2 The food pyramid was created by the U.S.Department of Agriculture in 1992 and has since become an American icon of proper nutrition. But critics have challenged the legitimacy of these nutrition guidelines, and researchers at Harvard University even created a pyramid of their own. 3 To
understand why Harvard researchers called the old pyramid a "license to overeat" (NPR 2002) and why the November 22, 2002, National Post reported that if the food pyramid were revised, "it would significantly reduce the number of people dying from heart attacks, strokes and other chronic diseases," let's begin with an informative appetizer and
look at the new pyramid. After cleansing our palate, we can make a trip to the buffet and load up on the advantages of these new guidelines. Make sure you save some room for a generous helping of implications! 4 Like any good pyramid builders, we are going to start at the foundation with the history of governmental dietary
guidelines, then move up to discuss the problems with the old pyramid before we can cap it off with a description of Harvard's new Healthy Eating Pyramid. 5 The U.S. government began providing the public with dietary guidelines in 1894. Then from the five basic food groups developed in 1916 came the 12 basic food groups, the 7 basic food groups.
and finally, the four basic food groups that were the basis for the food pyramid in 1992, states the July 10, 2002, San Francisco Chronicle. But the 1992 pyramid is made up of carbohydrates such as bread and pasta, but the November 21
Poultry, Fish, Dry Beans, Eggs & Nuts Group 2-3 SERVINGS Vegetable Group 3-5 SERVINGS Bread, Cereal, Rice & Pasta Group 6-11 SERVINGS USDA and the US Department of Health and Human Services right for anyone. Refined carbohydrates, such as white bread and rice, increase glucose levels in the body and
remove many vitamins, minerals, and fiber. 7 In addition, the November 5, 2002, USAToday states that one of the main problems with the USDA's pyramid is that all types of fat are lumped together and labeled "bad." The article explains that monounsaturated and polyunsaturated fats found in nuts, fish, and plant products actually counteract the
negative effects of other fats and reduce cholesterol levels. Thus, when people eat fat-free foods, they are actually depriving the body of necessary fats that will help keep the heart healthy. 8 Finally, the San Francisco Chronicle of July 10, 2002, points out that Americans have grown so accustomed to "super-sizing" their portions that we now have a
distorted sense of serving sizes. The problem arises when people misinterpret serving sizes to such an extent that they're doubling or tripling the recommended intake without realizing it. 9 Instead of trying to prop up our crumbling food pyramid, the
December 15, 2002, Scientific American reports that research ers fol- Source: Harvard School of Public Health at . These symbols show fats and added sugars in foods. A complex topic explained in very clear terms. The familiar term "super-sizing" helps make this concept clear. A concise statement of the research that Harvard used to design its food

new pyramid continues to limit the entire population to one standard of dietary guidelines. The Scripps News Service of September 18, 2002, points out that ethnic groups such as Asians and Hispanics with different native diets are ignored. Also, children and the elderly require different nutrition from adults, which is especially important to note when
35 million Americans are now over the age of 65. 15 The Healthy Eating Pyramid shares some of the other faults of the USDA's pyramid as well. For example, some people criticize the pyramid shares some of the other faults of the USDA's pyramid as well.
study and no substitutions are given for people who are lactose intolerant or diabetic. 16 Now that we know how the Healthy Eating Pyramid is set up and its advantages, let's build a ramp to the pyramid is set up and its advantages, let's build a ramp to the top of the pyramid so we can see how likely it is to change. 17 The USDA's food pyramid has been plastered up in elementary
schools, doctors' offices, and on food packaging since its inception. Changing the whole way of life of the American public. According to an ABC News broadcast on November 21, 2002, ten years after it came out, the majority of consumers base their diets on the USDA's food pyramid because they believe they are staying
healthy by doing so. However, Alice Lichtenstein of Tufts University said in the previously cited NPR broadcast that the surge of fat-free foods that resulted from the "fat is bad" philosophy of the food pyramid has led to increased caloric intake, increased carbohydrates, and increased obesity. 18 While those things are bad, the good news is that the
food pyramid does influence American eating habits, and a better food pyramid may result in a healthier country. We can already see evidence of the Harvard system successfully decreasing heart disease in their testing, but there is other data to back their claims as well. For example, dietary advice in the 1960s and '70s made the distinction between
the different types of fat and recommended people replace saturated fat with polyunsaturated fat. The result was a 50 percent reduction in coronary heart disease in the 1970s and '80s. 19 Just like the Egyptian government allowed the army to use the Sphinx's nose as target practice, the USDA is reacting in much the same way to the Healthy
INFORMATIVE SPEAKING 423 Her metaphor is used for humor. Jaci explains: "Part of making choices like this is not overdone and serves a purpose in the speech." 12 Ideas backed up with research. Transition to next subpoint. Interesting point, but
this doesn't seem like much of a drawback. Transition to the final main point. The impact of the old pyramid is well supported. Support for an advantage of the new pyramid. comparison serves as a memory aid. Eating Pyramid. Steven Christiansen, acting director of the USDA's Center for Nutrition Policy and Promotion, told the previously cited USA Today that "Changing our symbol to something else would be like shooting ourselves in the foot." 20 We have reached the peak of our pyramidal parlance. Today, we began
with some appetizers and a discussion of the new pyramid, then we filled up at the advantages and disadvantages buffet so that we could finally digest a generous helping of implications. 21 Knowing the dietary guidelines we grew up on are flawed is one thing, but applying that knowledge and changing our eating habits is much more difficult. The
new pyramid isn't perfect either, but at least it's a wake-up call that is worth looking into. And even though the Healthy Eating Pyramid doesn't have stones or burial chambers, it still might help us live longer and leave our mark on the world. SUMMARY ACTIVITIES This chapter classified informative speaking based on content (speeches about
objects, processes, events, and concepts) and purpose (descriptions, explanations, and instructions). Next, it discussed the differences between informative speaking. It then suggested techniques for effective informative speaking. It then suggested techniques for effective informative speaking.
ability; creating information hunger by tapping into audience needs; and making it easy to listen by limiting the amount of information to build up understanding of complex information. Other techniques include emphasizing important
points through repetition and signposts; using clear organization and structure; using effective supporting materials, including visual aids; using clear language that uses precise, simple vocabulary and avoids jargon); and involving the audience participation, the use of volunteers, and a question-and-answer period. KEY
TERMS audience involvement 415 audience involvement 415 audience participation 406 information overload 406 information overload 406 information anxiety 406 information anxie
purposes, reword the following statements so that they specifically point out what the audience will be able to do after hearing the speech. 1. My talk today is about toilet training. 4. I'd like to talk to you today about sexist language. 5. There are
six basic types of machines. 6. The two sides of the brain have different functions. 7. Do you realize that many of you are sleep deprived? 2. Effective Repetition Create a list of three statements, or use the three that follow. Restate each of these ideas in three different ways. 1. The magazine Modern Maturity has a circulation of more than twenty
million readers. 2. Before buying a used car, you should have it checked out by an independent mechanic. 3. One hundred thousand pounds of dandelions are imported into the United States annually for medical purposes. 3. Using Clear Language For practice in using clear language, select an article from any issue of a professional journal in your
major field. Using the sug- 404-425 Ch13 Adler 3/1/05 8:02 AM Page 425 CHAPTER 13 gestions in this chapter, rewrite a paragraph from the article so that it will be clear and interesting to the layperson. descriptions of each film below and descriptions of other movies that illustrate informative speaking, see the CD-ROM that came with this book, and the Understanding Human Communication Web site at www.oup.com/us/uhc. There is a subgenre of popular film that might be called "the teacher film," in which an idealistic teacher has to come up with
ways to get through to a group of recalcitrant kids. The techniques that these teachers use to actually teach their students could be used as object lessons in innovative informative speaking. Here are some of our favorites. Mona Lisa Smile (2003). Rated PG. Julia Roberts plays a young art teacher at Wellesley College in the 1950s. At first she is
nonplussed because her students know too much and are too involved. While few students have such "problems," their mastery, Dangerous Minds (1995). Rated PG. Michelle Pfeiffer stars as an English teacher in a tough inner-city high school who struggles to
reach unruly students. Dead Poets Society (1989). Rated PG. Robin Williams plays a charismatic English teacher at a staid New England prep school who inspires his students with his love of poetry. Stand and Deliver (1987). Rated PG-13. Edward James Olmos stars as a real-life tough, demanding teacher named Jaime Escalante, who inspires
neglected East Los Angeles barrio students to pass an advanced calculus test for college credit. To Sir with Love (1967). Not rated. A novice teacher (Sidney Poitier) is assigned to a classroom of thuggish students who couldn't care less about learning. He reaches them by caring about them as individuals. 426-456 Ch14 Adler 2/28/05 10:02 AM Page
426 AFTER STUDYING THE MATERIAL IN THIS CHAPTER . . . You should understand: 1. The characteristics of persuasion and the ethical questions involved. 2. The difference between direct and indirect approaches. 5. The
importance of setting a clear persuasive purpose. 6. The basic idea of persuasive structure. 7. The importance of analyzing and adapting to your audience. 8. The components of persuasive structure an audience. 8. The components of persuasive structure. 7. The importance of analyzing and adapting to your audience. 8. The components of persuasive structure. 7. The importance of analyzing and adapting to your audience. 8. The components of persuasive structure. 7. ethical guidelines. 3. Bolster your credibility as a speaker by enhancing your competence, character, and charisma. 4. Build persuasive arguments through audience effect. 426-456 Ch14 Adler 2/28/05 10:02 AM Page 427 CHAPTER HIGHLIGHTS
Persuasion is the process of motivating someone, through communication, to change a belief, attitude, or behavior. Persuasion is usually incremental. Persuasion is interactive. Persuasion is not coercive.
following types: Adapting to your audience is an important part of persuasive strategy. To do so, you should: Establish common ground. Organize according to the expected response.
Competence By desired outcome Character By directness of approach Character By directness of approach Character By directness of approach Avoid fallacies.
456 Ch14 Adler 428 2/28/05 PART FOUR 10:02 AM PUBLIC COMMUNICATION Where wisdom is called for, force is of little use. Herodotus Page 428 John William Coleman, a student at Berry College in Georgia whose speech on modern forms of slavery serves as the sample speech at the end of this chapter, sums up his knowledge of persuasive
speaking in the following way: The art of persuasion is not a mechanical thing; it is a deeply human phenomenon. There is a lot of suffering and injustice in the world, and despite its common misuses, persuasive speaking was formulated to fight those injustices. What could be more important or more fulfilling than that? 1 Not every student would
agree with John on the joys of persuasive speaking, but across the United States and the world, many college students are speaking out. They are becoming increasingly engaged in a variety of issues, including global ones such as the gap between rich and poor and the international influence of American corporations. Students have staged hunger
strikes at Purdue and clothing-optional protests at the University of North Carolina, where the theme was "I'd Rather Go Naked Than Wear Sweatshop." 2 These students are all engaged in the age-old activity of persuasion. How persuasion works and how to accomplish it successfully are complex topics. Our understanding of persuasion begins with
classical wisdom and extends to the latest psychological research. We begin by looking at what we really mean by the term. CHARACTERISTICS OF PERSUASION Persuasion is the process of motivating someone, through communication, to change a particular belief, attitude, or behavior. Implicit in this definition are several characteristics of
persuasion. Persuasion Is Not Coercive Persuasion Is Not Coercive Persuasion is not the same thing as coercion. If you held a gun to someone's head and said, "Do this, or I'll shoot," you would be acting coercively. Besides being illegal, this approach would be ineffective. As soon as the authorities came and took you away, the person would stop following your demands. The
failure of coercion to achieve lasting results is also apparent in less dramatic circumstances. Children whose parents are coercive often rebel as soon as they can; students who perform from fear of an instructor's threats rarely appreciate the subject matter; and employees who work for abusive and demanding employers are often unproductive and
eager to switch jobs as soon as possible. Persuasion, on the other hand, makes a listener want to think or act differently. Persuasion is a process. When it is successful, it generally succeeds over time, in increments, and usually small increments at that. The
realistic speaker, therefore, establishes goals and expectations that reflect this characteristic of persuasion. Communication scientists explain this characteristic of persuasion through social judgment theory. This theory tells us that when members of an audience hear a persuasion through social judgment theory.
preexisting opinion is called an anchor, but around this anchor there exist what are called latitudes of noncommitment. A diagram of any opinion, therefore, might look something like Figure 14-1. People who care very strongly about a
particular point of view (called "highly ego-involved" by communication researchers) will have a very narrow latitude of noncommitment. Research suggests that audience members simply will not respond to appeals that fall within their latitude of rejection. This means that
persuasion in the real world takes place in a series of small movements. One persuasive speech may be but a single step in an overall persuasive campaign. Candidates watch the opinion polls carefully, adjusting their appeals to the
```

latitudes of acceptance and noncommitment of the uncommitted voters. Public speakers who heed the principle of social judgment theory tend to seek realistic, if modest, goals in their speeches. For example, if you were hoping to change audience views on the pro-life/pro-choice question, social judgment theory suggests that the first step would be to

consider a range of arguments such as this: Abortion is a sin. Abortion should be absolutely illegal. Abortion should be required to have a parent's permission to have an abortion. A girl under the age of eighteen should not be required to have a parent's permission to have an abortion. Abortion is a woman's personal decision. Abortion should be discouraged but legal. Abortion should be available anytime to anyone. Abortion should be considered simply a form of birth control. You could then arrange these positions on a continuum, and estimate how listeners would react to each one. The statement that best represented the listeners'point of view would be their activate of acceptance. Opinions that Strongly agree Agree Don't care Strongly disagree (Anchor) (Latitude of acceptance) (Latitude of acceptance) arguments also persistent also people they would make up their latitude of rejection. Those at Parent to ensure that the best chance of changing audience attitudes would come by presenting an argument based on a position that you ultimately wanted them to accept. If you pushed too hard by ackfire, making your audience members but rather that it is something you do to audience members but rather that it is something you do with them. This mutual

own and try them out. Make twisters for both consonant sounds ("Frank's friendly face flushed furiously") and vowel sounds ("Oliver oiled the old annoying oddity"). Hahner, Jeffrey C., Martin A. Sokoloff, and Sandra L. Salisch. Speaking Clearly: Improving Voice and Diction. New York: McGraw Hill, 2002. This text comes with a pronunciation guide on

```
activity is best seen in an argument between two people, in which an openness to opposing arguments is essential to resolution. As one observer has pointed out, Arguments are not won by shouting down opponents arguments are spectful hearing and
still persuade their advocates that there is something wrong with those arguments. In the course of this activity, we may well decide that there is something wrong with our own. 4 Even in public communication, both speaker and audience are active. This might be manifested in the speaker taking an audience survey before a speech, a sensitivity to
audience reactions during a speech, or an open-minded question-and-answer period after a speech. Persuasion Can Be Ethical I know only that what is immoral is what you feel bad after and what is immoral is what you feel bad after and what is immoral is what you feel bad after and what is immoral is what you feel bad after and what is immoral is what you feel bad after and what is immoral is what you feel bad after and what is immoral is what you feel bad after and what is immoral is what you feel bad after and what is immoral is what you feel bad after and what is immoral is what you feel bad after and what is immoral is what you feel bad after and what is immoral is what you feel bad after and what is immoral is what you feel bad after and what is immoral is what you feel bad after and what is immoral is what you feel bad after and what is immoral is what you feel bad after and what is immoral is what you feel bad after and what is immoral is what you feel bad after and what is immoral is what you feel bad after and what is immoral is what you feel bad after and what is immoral is what you feel bad after and what is immoral is what you feel bad after and what is immoral is what you feel bad after and what is immoral is what you feel bad after and what is immoral is what you feel bad after a speech.
uncomfortable with the idea of persuasive speaking. They see it as the work of high-pressure hucksters: salespeople with their feet stuck in the door, unscrupulous politicians taking advantage of beleaguered taxpayers, and so on. Indeed, many of the principles we are about to discuss have been used by unethical speakers for unethical purposes, but
that is not what all—or even most—persuasion is about. Ethical persuasion plays a necessary and worthwhile role in everyone's life. It is through ethical persuasion that we influence others' lives in worthwhile ways. The person who says, "I do not want to influence others' lives in worthwhile ways. The person who says, "I do not want to influence others' lives in worthwhile ways. The person who says, "I do not want to influence others' lives in worthwhile ways. The person who says, "I do not want to influence others' lives in worthwhile ways. The person who says, "I do not want to influence others' lives in worthwhile ways. The person who says, "I do not want to influence others' lives in worthwhile ways. The person who says, "I do not want to influence others' lives in worthwhile ways. The person who says, "I do not want to influence others' lives in worthwhile ways. The person who says, "I do not want to influence others' lives in worthwhile ways."
is an abandonment of one's responsibilities as a human being. Look at the good you can accomplish through persuasion: You can convince a loved one to give up smoking or to not keep a firearm in the house; you can get members of your community to conserve energy or to join together to refurbish a park; you can persuade an employer to hire you
for a job where your own talents, interests, and abilities will be put to their best use. Persuasion is considered ethical? If your plan is selfish and not in the best interest of your audience members, but you are honest about your motives—is that ethical? If your plan is in the best
interest of your audience members, yet you lie to 426-456_Ch14 Adler 2/28/05 10:02 AM Page 431 CHAPTER 14 them to accept the plan—is that ethical? Philosophers and rhetoricians have argued for centuries over questions like these. There are many ways to define ethical persuasion. 5 For our purpose, we will consider it as
communication in the best interest of the audience that does not depend on false or misleading information to change an audience's attitude or behavior. The best way to appreciate the value of this simple definition is to consider the many strategies listed in Table 14-1 that do not fit it. For example, faking enthusiasm about a speech topic, plagiarizing
material from another source and passing it off as your own, and making up statistics to support your case are clearly unethical. Besides being wrong on moral grounds, unethical attempts at persuasion have a major practical disadvantage: If your deception is uncovered, your credibility will suffer. If, for example, prospective buyers uncover your
attempt to withhold a structural flaw in the condominium you are trying to sell, they will probably suspect that the property has other hidden problems. Likewise, if your speech instructor suspects that you are lifting material from other sources without giving credit, your entire presentation will be suspect. One unethical act can cast doubt on future from other sources without giving credit, your entire presentation will be suspect.
truthful statements. Thus, for pragmatic as well as moral reasons, honesty really is the best policy. TABLE 14-1 Unethical Communication Behaviors 1. Committing Plagiarism a. Claiming someone else's ideas as your own b. Quoting without citing the source 2. Relaying False Information a. Deliberate lying b. Ignorant misstatement c. Deliberate
distortion and suppression of material d. Fallacious reasoning to misrepresent truth 3. Withholding Information; Suppression a. About self (speaker); not disclosing private motives or special interests b. About self (speaker); not disclosing private motives or special interests b.  456 Ch14_Adler 432 2/28/05 PART FOUR 10:02 AM Page 432 PUBLIC COMMUNICATION ETHICAL CHALLENGE ANALYZING COMMUNICATION BEHAVIORS Read Table 14-1 carefully. The behaviors listed there are presented in what some (but certainly not all) communication experts would describe as "most serious to least serious" ethical
faults. Do you agree or disagree with the order of this list? Explain your answer, and whether you would add to this list? Explain your answer, and whether you will make as a
speaker. What kinds of subjects will you focus on? What results will you be seeking? How will you go about getting those results? In the following pages we will look at each of these questions. By Types of Proposition Persuasive topics fall into one of three categories, depending on the type of thesis statement (referred to as a "proposition" in
persuasion) that you are advancing. The three categories are propositions of fact, propositions of policy. PROPOSITIONS OF FACT Some persuasive messages focus on propositions of fact; issues in which there are two or more sides with conflicting evidence, where listeners are required to choose the truth for themselves
 Some questions of fact are these: Caffeine is/is not addictive. The United States does/does not give as much foreign aid to undeveloped nations as do other wealthy countries. Canada's nationalized health care is more/is less efficient than the U.S. system of health care. These examples show that many questions of fact can't be settled with a simple
 "yes" or "no" or with an objective piece of information. Rather, they are open to debate, and answering them requires careful examination and interpretation of evidence, usually collected from a variety of sources. That's why it is possible to debate questions of fact, and that's why these propositions form the basis of persuasive speeches and not
informative ones. PROPOSITIONS OF VALUE Propositions of value go beyond issues of truth or falsity and explore the worth of some idea, person, or object. Propositions of value include the following: Cheerleaders are/are not just as valuable as the athletes on the field. The United States is/is not justified in attacking countries that harbor terroris
organizations. The use of laboratory animals for scientific experiments is/is not cruel and immoral. 426-456_Ch14_Adler 2/28/05 10:02 AM Page 433 CHAPTER 14 In order to deal with most propositions of value, you will have to explore certain propositions of fact. For example, you won't be able to debate whether the experimental use of animals in
research is immoral—a proposition of value— until you have dealt with propositions of fact such as how many animals are used in experiments and whether experts believe they actually suffer. PROPOSITIONS OF POLICY Propositions of policy go one step beyond questions of fact or value; they recommend a specific course of action (a "policy"). Some
questions of policy are these: The Electoral College should/should not be abolished. Condoms should/should not be distributed in high schools. Genetic engineering of plants and livestock is/is not an appropriate way to increase the food supply. Looking at persuasion according to the type of proposition is a convenient way to generate topics for a
 persuasive speech, because each type of proposition suggests different topics. Selected topics could also be handled differently depending on how they are approached. For example, a campaign speech could be approached as a proposition of fact ("Candidate X has done more for this community than the opponent"), a proposition of value ("Candidate X has done more for this community than the opponent"), a proposition of value ("Candidate X has done more for this community than the opponent"), a proposition of value ("Candidate X has done more for this community than the opponent"), a proposition of value ("Candidate X has done more for this community than the opponent"), a proposition of value ("Candidate X has done more for this community than the opponent"), a proposition of value ("Candidate X has done more for this community than the opponent"), a proposition of value ("Candidate X has done more for this community than the opponent"), a proposition of the opponent of the oppon
X is a better person than the opponent"), or a proposition of policy ("We should get out and vote for Candidate X"). Remember, however, that a fully developed persuasive speech is likely to contain all three types of propositions. If you were preparing a speech advocating that college athletes should be paid in cash for their talents (a proposition of
policy), you might want to first prove that the practice is already widespread (a proposition of fact) and that it is unfair to athletes from other schools (a proposition of value). By Desired Outcomes we can also categorize persuasion according to two major outcomes: convincing and actuating. CONVINCING When you set about to convince an
audience, you want to change the way its members think. When we say that convincing an audience changes the way its members think, we do not mean that you have to swing them from one belief or attitude to a completely different one. Sometimes audience members will already think the way you want them to, but they will not be firmly enough
committed to that way of thinking. When that is the case, you reinforce, or strengthen, their opinions. For example, if your audience already believed that the federal budget should be balanced but did not consider the idea important, your job would be to reinforce members' current beliefs. Reinforcing is still a type of change, however, because you are
causing an audience to adhere more strongly to a belief or attitude. In other cases, a speech to convince will begin to shift attitudes without bringing about a total change of thinking. For example, an effective speech to convince might get a group of skeptics to consider the possibility that bilingual education is/isn't a good idea. ACTUATING When your
set about to actuate an audience, you want to move its members to a specific behavior. Whereas a speech to convince might move an au- PERSUASIVE SPEAKING 433 The credit goes to the person who convinces the world, not to the one to whom the idea first occurs. Sir Francis Darwin 426-456 Ch14 Adler 434 2/28/05 PART FOUR 10:02 AM Page
434 PUBLIC COMMUNICATION dience to action based on the ideas you've convinced members of, it won't be any specific action. There are two types of action you can ask for—adoption or discontinuance. The former asks an audience to engage in a new
behavior; the latter asks an audience to stop behaving in an established way. If you gave a speech for a political candidate and then asked for contributions to that candidate and then asked your audience members to sign a pledge to quit,
you would be asking them to discontinue an established behavior. By Directness of Approach We can also categorize persuasion does not try to disguise the speaker's persuasive purpose in any way. In direct persuasion the speaker will make
his or her purpose clear, usually by stating it outright early in the speech. This is the best strategy to use with a friendly audience, especially when you are asking for a response that the audience is reasonably likely to give you. Direct persuasion is the kind we hear in most academic situations. Brian Mohr, a student at Hastings College in Nebraska,
used direct persuasion in his speech advocating support for public libraries across the nation to close, lay off staff, shorten hours, and cancel programs. And while no one is dying of this problem, the United States educational and cultural
health is in danger if this trend continues. Without 426-456 Ch14 Adler 2/28/05 10:02 AM Page 435 CHAPTER 14 continued support to our public libraries, many of our nation's citizens' ability to critically evaluate and analyze communication will be greatly diminished. So, in honor of National Library Week (which is this week) we will first examine
the many cuts that our public libraries are facing, then find out why we need to stop this continuing trend, so we can finally discover ways that we can all restore vitality to our nation's libraries are facing, then find out why we need to stop this continuing trend, so we can finally discover ways that we can all restore vitality to our nation's libraries are facing, then find out why we need to stop this continuing trend, so we can finally discover ways that we can all restore vitality to our nation's libraries are facing, then find out why we need to stop this continuing trend, so we can finally discover ways that we can all restore vitality to our nation's libraries are facing, then find out why we need to stop this continuing trend, so we can finally discover ways that we can all restore vitality to our nation's libraries are facing, then find out why we need to stop this continuing trend, so we can finally discover ways that we can all restore vitality to our nation's libraries are facing.
speaker's persuasive purpose in some way. The question "Is a season ticket to the symphony worth the money?" (when you intend to prove that it is) is based on indirect persuasion, as is any strategy that does not express the speaker's purpose at the outset. Indirect persuasion is sometimes easy to spot. A television commercial that shows us
attractive young men and women romping in the surf on a beautiful day and then flashes the product name on the screen is pretty indisputably indirect persuasion. Political hopeful might be ostensibly speaking on some great social issue
when the real persuasive message is "Please—remember my name, and vote for me in the next election." In public speaking, indirect persuasion is usually disguised as informative speaking audience members to remain celibate before
marriage and monogamous after marriage. Indirect persuasion isn't necessarily unethical. In fact, it is probably the best approach to use the indirect approach to use when your audience is hostile to either you or your topic. It is also often necessary to use the indirect approach to use when your audience is hostile to either you or your topic. It is also often necessary to use the indirect approach to use when your audience is hostile to either you or your topic. It is also often necessary to use the indirect approach to use the indirect approach to use when your audience is hostile to either you or your topic. It is also often necessary to use the indirect approach to use the indirect approach to use when your audience is hostile to either you or your topic. It is also often necessary to use the indirect approach 
circumstances, you might want to ease into your speech slowly. You might take some time to make your audience feel good about you or the social action you are advocating. If you are speaking in favor of your candidacy for city council, but you are infavor of a tax increase and your audience is not, you might take some time to make your audience feel good about you or the social action you are infavor of your candidacy for city council, but you are infavor of your speech slowly.
wellfinanced city council can provide to the community. You might even want to change your desired audience members to rush out to vote for you, you might want them simply to read a policy statement that you have written or become more informed on a particular issue. The one thing you cannot do in
this instance is to begin by saying, "My appearance here today has nothing to do with my candidacy for city council." That would be a false statement. It is more than indirect; it is unethical. CRITICAL THINKING PROBE DIRECT OR INDIRECT PERSUASION? Find a current political speech in Vital Speeches of the Day, The New York Times, or on the
Internet (See the "Understanding Communication Technology" sidebar on the next page). Which type of persuasive strategy used effectively? Why or why not? The test of the ethics of an indirect approach would be whether you would express your persuasive purpose directly if asked to do so. In
other words, if someone in the audience stopped you and asked, "Don't you want us to vote for you for 426-456_Ch14 Adler 436 2/28/05 PART FOUR 10:02 AM Page 436 PUBLIC COMMUNICATION UNDERSTANDING COMMUNICATION TECHNOLOGY PERSUASIVE SPEECHES ON THE WEB Chapter 12 (page 400) pointed out that the Web can be
used to find audio and video clips of historical speeches. The Web can also be used to find a variety of persuasive speeches in transcript form, which is the best way to study them for attributes like strategy and ethics. Here are a few of our favorite sites. The Douglass Archive An electronic archive of American oratory and related documents,
 maintained by Northwestern University. Has the most recent political speeches and reaches far back into history. Allows you to review speeches and related documents by speaker, by title, by time period, and by controversy or movement. Congressional Record The Congressional Record is the official record of the proceedings and debates of the U.S
Congress. It is published daily when Congress is in session. Searchable. Speech and Transcript Center A wide range of speech transcripts and speeches in audio. Speeches from business leaders, television/radio programs, U.S. government, state officials, international government, professional organizations, and historical speeches. Maintained by
George Washington University. city council?" if you were ethical, you would admit to it rather than deny your true purpose. CREATING THE PERSUASIVE MESSAGE Preparing an effective persuasive purpose; structure the
message carefully; use solid evidence; and avoid fallacies. Set a Clear, Persuasive Purpose Remember that your objective in a persuasive speech to convince, the purpose statement will probably stress an attitude: After listening to my speech, my audience members will
agree that steps should be taken to save whales from extinction. In a speech to actuate, the purpose statement will stress behavior: After listening to my speech, my audience members will sign my petition. As Chapter 10 explained, your purpose statement should always be specific, attainable, and worded from the audience's point of view. "The purpose
of my speech is to save the whales" is not a purpose statement that has been carefully thought out. Your audience members wouldn't be able to support a specific piece of legislation. A clear, specific purpose statement will help you stay on track
throughout all the stages of preparation of your persuasive speech. Because the main purpose of 426-456 Ch14 Adler 2/28/05 10:02 AM Page 437 CHAPTER 14 your speech is to have an effect on your audience, you have a continual test that you can use for every idea, every piece of evidence, and every organizational structure that you think of
using. The question you ask is, "Will this help me to get the audience members to think/feel/behave in the manner I have described in my purpose statement?" If the answer is "yes," you forge ahead. Structure the Message Carefully A sample structure of the body of a persuasive speech is outlined in Figure 14-2. With this structure, if your objective is
to convince, you concentrate on the first two components: Establishing the problem and describing the solution. If your objective is to actuate, you add the third component, describing the desired audience reaction. There are, of course, other structures for persuasive speeches. This one can be used as a basic model, however, because it is easily
applied to most persuasive topics. DESCRIBE THE PROBLEM In order to convince an audience that something needs to be changed, you have to show members that a problem exists. After all, if your listeners don't recognize the problem will answer to show members that a problem will answer to show members that a problem will answer to show members that a problem exists. After all, if your listeners don't recognize the problem will answer to show members that a problem will be approximate the problem will be approximate to show members that a problem will be a problem will be a problem will be approximate to show members that a problem will be approximate to show members that a problem will be a problem will be a problem will be approximate to show members that a problem will be a probl
two questions, either directly or indirectly or indirectly. What Is the Nature of the Problem? Your audience members might not recognize that the topic you are discussing is a problem at all, so your first task is to convince them that there is something wrong with the present state of affairs. For example, if your thesis was "This town needs a shelter for homeless
families," you would need to show that there are, indeed, homeless families and that the plight of these homeless families is serious. Your approach to defining your problem will depend largely on your audience analysis, as discussed in Chapter 10. If your prespeech analysis shows that your I. Describe the problem. A. 14-2 Sample Structure for a Persuasive Speech PERSUASIVE SPEAKING 437 426-456_Ch14_Adler 438 2/28/05 PART FOUR 10:02 AM Page 438 PUBLIC COMMUNICATION CULTURAL IDIOM paint a . . . picture: describe in detail get back on their feet: return to a financially stable lifestyle audience may not feel sympathetic to your topic, you will
need to explain why your topic is, indeed, a problem that your audience should recognize. In a speech about the plight of the homeless, you might need to establish that most homeless, and maybe even shown as the place of the homeless.
photographs to demonstrate that some homeless people are hardworking but unlucky parents and innocent children who lack shelter owing to forces beyond their control. How Does the Problem affects them in some
 way. This is relatively easy in some cases: the high cost of tuition, the lack of convenient parking near campus, the quality of food in the student at the University of Texas at Austin, presented a speech on the need to improve prison
healthcare. She established the importance of this topic to her audience this way: Prison healthcare is failing those behind bars. If you're more concerned about your own health care than an inmate's, consider this: the men and women released from our correctional institutions carry diseases back out and into our lives. Corrections Professional of
February 14, 2003 points out that "11 million jail and prison inmates released each year bring AIDS, TB [and] hepatitis out into their communities." 8 The problem section of a persuasive speech at the end of this chapter is an example of this type of
organization.) DESCRIBE THE SOLUTION Your next step in persuading your audience members is to convince them that there is an answer to the problem you have just introduced. To describe your solution, you should answer two questions: Will the Solution Work? A skeptical audience might agree with the desirability of your solution but still not
believe that it has a chance of succeeding. In the homeless speech discussed previously, you would need to prove that the establishment of a shelter can help unlucky families get back on their feet— especially if your audience analysis shows that some listeners might view such a shelter as a way of coddling people who are too lazy to work. What
Advantages Will Result from Your Solution? You need to describe in specific terms how your proposal. In the speech proposing a shelter for homeless families, the benefits you describe would probably include these: 1. Families will have a
safe place to stay, free of the danger of living on the street. 2. Parents will have the resources that will have to apply antivagrancy laws (such as prohibitions against sleeping in cars) to people who aren't the intended target of those laws. 4. The community
(including your listeners) won't need to feel guilty about ignoring the plight of unfortunate citizens. 426-456 Ch14 Adler 2/28/05 10:02 AM Page 439 CHAPTER 14 DESCRIBE THE DESIRED AUDIENCE RESPONSE When you want to go beyond simply a strategy to convince your audience members and use a strategy to actuate them to follow your
solution, you need to describe exactly what you want them to do. This action step,like the previous ones, should answer two questions. PERSUASIVE SPEAKING The most savage controversies are about those matters as to which there is no good evidence either way. Bertrand Russell What Can the Audience Do to Put Your Solution into Action? Make
the behavior you are asking your audience members to adopt as clear and simple as possible for them. If you want them to vote in a referendum, tell them when and where to go to vote and how to go about registering, if necessary (some activists even provide transportation). If you're asking them to support a legislative change, don't expect them to
 write their congressional representative. You write the letter or draft a petition, and ask them to sign it. If you're asking for a donation, pass the hat at the conclusion of your speech, or give audience members a stamped, addressed envelope and simple forms that they can return easily. What Are the Direct Rewards of This Response? Your solution migh
be important to society, but your audience members will be most likely to adopt it if you can show that supporting legislation to reduce a wide range of benefits from reduced lung damage to healthier forests to longer life for their car's paint. Explain that saying "no" to a second drink
before driving will not only save lives but also help your listeners avoid expensive court costs, keep their insurance rates low, and prevent personal feelings of satisfaction and provide an impressive demonstration of community service on a job-seeking
résumé. ADAPT THE MODEL PERSUASIVE STRUCTURE Describing the problem and the solution makes up the basic structure for any persuasive speech. However, you don't have to analyze too many successful persuasive speech. However, you don't have to analyze too many successful persuasive speech.
structure is to use the organization suggested by Alan Monroe in his Motivated Sequence, which we mentioned briefly in Chapter 11 (pages 360-361). In that pattern the problem is broken down into a satisfaction step, and an action step, and an action step. In another
 adaptation of the basic model, the speaker will combine the "solution" with the "desired audience response." (See the sample speech at the end of this chapter.) Use Solid Evidence All the forms of support discussed in Chapter 11 can be used to back up your persuasive arguments. 10 Your objective here is not to find supporting material that just
such as fear, anger, sympathy, pride, or reverence. Emotional evidence is an ethical fault only when it is used to obscure the truth (see Table 14-1, page 431). It is ethical, however, to use emotion to give impact to a truth. 439 426-456 Ch14 Adler 440 2/28/05 PART FOUR 10:02 AM Page 440 PUBLIC COMMUNICATION UNDERSTANDING
DIVERSITY CULTURAL DIFFERENCES IN PERSUASION Different individuals have a tendency to view persuasion differently, and often these differences are based on culturally determined. Not all cultures use logic in the same way that the Euro-American
culture does. The influence of the dominant culture is seen even in the way we talk about "defending" ideas and "attacking our opponent's position" we are using male-oriented militaristic/ aggressive terms. Logic is also based on a trust in objective reality, on information that is verifiable through our senses. As one
researcher points out, such a perspective can be culturally influenced: Western culture assumes a reality that is materialist and limited to comprehension via the five senses. African culture assumes a reality that is materialist and limited to comprehension via the five senses. African culture assumes a reality that is materialist and limited to comprehension via the five senses.
recommended a blending of logical and emotional evidence you use, you should cite your sources are credible, unbiased, and current. If you are quoting the source of an interview, give a full statement of the source's credentials: According to Sean Wilentz
professor of history, director of the Program in American Studies at Princeton University, and the author of several books on this topic . . . . If the currency of the interview is important, you might add, "I spoke to Professor Wilentz just last week . . . ." If you are quoting an article, give a quick statement of the author's credentials and the full date and title
of the magazine: According to Professor Sean Wilentz of Princeton University, in an article in the June 25, 2002, New York Times Magazine . . . You do not need to give the title of the author's credentials: According to
Professor Sean Wilentz of Princeton University, in his book The Kingdom of Matthias . . . You don't need to include the copyright date unless it's relevant to your topic. Generally, if you're unsure about how to cite your
sources in a speech, you should err in the direction of too much information rather than too little. Carefully cited sources are part of a well-reasoned argument. This brings us to our next step in creating a persuasive message. 426-456 Ch14 Adler 2/28/05 10:02 AM Page 441 CHAPTER 14 Avoid Fallacies A fallacy (from the Latin word meaning "false")
is an error in logic. Although the original meaning of the term implied purposeful deception, most logical fallacies are not recognized as such by those who use them. Scholars have devoted lives and volumes to the description of various types of logical fallacies. 13 Here are some of the most common ones to keep in mind when building your persuasive
argument:14 ATTACK ON THE PERSON INSTEAD OF THE ARGUMENT (AD HOMINEM) In an ad hominem argument is easy to detect. "How can you believe that fat slob?" is hardly persuasive. It takes critical thinking to
catch more subtle ad hominem arguments, however. Consider this one: "All this talk about 'family values' is hypocritical. Take Senator , who made a speech about the 'sanctity of marriage' last year. Now it turns out he was having an affair with his secretary, and his wife is suing him for divorce. "Although the senator certainly does seem to be a
hypocrite, his behavior doesn't necessarily weaken the merits of family values. REDUCTION TO THE ABSURD (REDUCTION AD ABSURDUM) A reductio ad absurdum fallacy unfairly attacks an argument by extending it to such extreme lengths that it looks ridiculous."If we allow developers to build homes in one section of this area, soon we will have
no open spaces left. Fresh air and wildlife will be a thing of the past." "If we allow the administration to raise tuition this year, soon they will be raising it every year, and before we know it only the wealthiest students will be able to go to school here." This extension of reasoning doesn't make any sense: Developing one area doesn't necessarily means the past."
that other areas have to be developed, and one tuition increase doesn't mean that others will occur. Any of these policies might be unwise or unfair, but the ad absurdum reasoning doesn't prove it. EITHER-OR An either-or fallacy sets up false alternatives, suggesting that if the inferior one must be rejected, then the other must be accepted. An angry
 citizen used either-or thinking to support a proposed city ordinance: "Either we outlaw alcohol in city parks, or there will be no way to get rid of drunkenness besides banning all alcoholic beverages. The old saying "America, love it or leave it" provides
 another example of either-or reasoning. For instance, when an Asian-born college professor pointed out examples of lingering discrimination in the United States, some suggested that if she didn't like her adopted country and still envision ways to make it a bettern to her native home—ignoring that it is possible to admire a country and still envision ways to make it a bettern to her native home.
place. FALSE CAUSE (POST HOC ERGO PROPTER HOC) A post hoc fallacy mistakenly assumes that one event causes another because they occur sequentially. An old (and not especially funny) joke illustrates the post hoc fallacy. Mac approaches Jack and asks, "Hey, why are you snapping your fingers?" Jack replies, "To keep the elephants away." Mac
is incredulous: "What are you talking about? There aren't any elephants within a thousand miles of here." Jack smiles and keeps on snapping: "I know.Works pretty well, doesn't it?" PERSUASIVE SPEAKING 441 426-456_Ch14_Adler 442 2/28/05 PART FOUR 10:02 AM Page 442 PUBLIC COMMUNICATION CULTURAL IDIOM follow the crowd: do
what the majority does In real life, post hoc fallacies aren't always so easy to detect. For example, one critic of education pointed out that the increase in sexual promiscuity among adolescents began about the same time as prayer in public schools was prohibited by the courts. A causal link in this case may exist: Decreased emphasis on spirituality
could contribute to promiscuity. But it would take evidence to establish a definite connection between the two phenomena. APPEAL TO AUTHORITY (ARGUMENTUM AD VERECUNDIAM) An argumentum ad verecundiam fallacy involves relying on the testimony of someone who is not an authority in the case being argued. Relying on experts is not a
fallacy, of course. A movie star might be just the right person to offer advice on how to seem more glamorous, and a professional athlete could be the best person to comment on what it takes to succeed in organized sports. But an ad verecundiam fallacy occurs when the movie star promotes a political candidate or the athlete tells us why we should
buy a certain kind of automobile. When considering endorsements and claims, it's smart to ask yourself whether the source is qualified to make them. BANDWAGON APPEAL (ARGUMENTUM AD POPULUM) An argumentum ad populum fallacy is based on the often dubious notion that, just because many people favor an idea, you should, too.
 Sometimes, of course, the mass appeal of an idea can be a sign of its merit. If most of your friends have enjoyed a film or a new book, there is probably a good chance that you will, too. But in other cases widespread accurately
that the earth is not the center of the universe, and he suffered for his convictions. The lesson here is simple to comprehend but often difficult to follow: When faced with an idea, don't just follow the crowd. Consider the facts carefully and make up your own mind. ADAPTING TO THE AUDIENCE It is important to know as much as possible about your
 audience for a persuasive speech. For one thing, you should appeal to the values of your audience whenever possible, even if they are not your strongest values. This advice does not mean you should pretend to believe in something. According to our definition of ethical persuasion, pretense is against the rules. It does mean, however, that you have to
stress those values that are felt most forcefully by the members of your audience—a target audience—a target audience, the subgroup you must persuade to reach your goal—and aim your speech mostly at
those members. Some of your audience members might be so opposed to what you are advocating that you have no hope of reaching them. Still others might be undecided or uncommitted, and they would be the most productive target for
your appeals. Of course, you need not ignore that portion of your target might be the smokers in your target might be the 
could convince the nonsmokers not to start and to use their influence to help their smoking friends quit. All of the methods of audience analysis described in Chapter 10—surveys, observation, interviews, and research—are valuable in collecting information about your audience for a persuasive speech. PERSUASIVE SPEAKING Speech is power;
speech is to persuade, to convert, to compel. It is to bring another out of his bad sense into your good sense. Ralph Waldo Emerson Establish Common Ground It helps to stress as many similarities as possible between yourself and your audience members. This technique helps prove that you understand them: If not, why should they listen to you?
Also, if you share a lot of common ground, it shows you agree on many things; therefore, it should be easy to settle one disagreement—the one related to the attitude or behavior you would like them to change. The manager of public affairs for Playboy magazine gave a good demonstration of establishing common ground when he reminded a group of
Southern Baptists that they shared some important values with him: I am sure we are all aware of the Southern Baptist convention. I was intrigued by the invitation when it came last fall, though I was not surprised. I am grateful for your
genuine and warm hospitality, and I am flattered (although again not surprised) by the implication that I would have meaning to you people. Both Playboy and the Baptists have indeed been considering many of the same issues and ethical problems; and even if we have not arrived at the same conclusions, I am
 impressed and gratified by your openness and willingness to listen to our views.16 Organize According to the Expected Response It is much easier to get an audience to agree with you if the members have already agreed with you on a previous point. Therefore, you should arrange your points in a persuasive speech so you develop a "yes" response. In
 effect, you get your audience into the habit of agreeing with you. For example, if you were giving a speech on the donation of body organs, you might ask them if they would like to have a major role in curbing tragic and needless
dying. The presumed response to both questions is "yes." It is only when you have built a pattern of "yes" responses that you would ask the audience to sign organ donor cards. An example of a speaker who was careful to organize material according to expected audience response was the late Robert Kennedy, when speaking on civil rights
before a group of South Africans who believed in racial discrimination, arranged his ideas so that he spoke first on values that he and his audience members are already basically in agreement with you, you can organize your material to reinforce their attitudes quickly and then spend most
of your time convincing them to take a specific course of action. If, on the other hand, they are hostile to your ideas, you have to spend more time getting the first "yes" out of them. 443 CULTURAL IDIOM on the other hand, they are hostile to your ideas, you have to spend more time getting the first "yes" out of them. 443 CULTURAL IDIOM on the other hand; from the other hand, they are hostile to your ideas, you have to spend more time getting the first "yes" out of them. 443 CULTURAL IDIOM on the other hand, they are hostile to your ideas, you have to spend more time getting the first "yes" out of them. 443 CULTURAL IDIOM on the other hand.
Neutralize Potential Hostility Hear the other side. Saint Augustine One of the trickier problems in audience adaptation occurs who feel adversely about you, your topic, or the speech situation. Members of a hostile audience adaptation occurs who have a significant number of members who feel adversely about you, your topic, or the speech situation.
could range from unfriendly to violent. Two guidelines for handling this type of audience are (1) show that you understand their point of view and (2) if possible, use appropriate humor. A good example of a speaker who observed these guidelines was First Lady and literacy activist Barbara Bush when she was invited to speak at the commencement
exercises at Wellesley College in 1990. After the invitation was announced, 150 graduating seniors at the prestigious women's college signed a petition in protest. They wrote, in part: We are outraged by this choice and feel it is important to make ourselves heard immediately. Wellesley teaches us that we will be rewarded on the basis of our own work
not on that of a spouse. To honor Barbara Bush as a commencement speaker is to honor a woman who has gained recognition, knowing that these 150 students and others who shared their view would be in the audience of 5,000 people. Mrs. Bush decided to honor her speaking obligation, knowing that these 150 students and others who shared their view would be in the audience of 5,000 people. Mrs. Bush decided to honor her speaking obligation, knowing that these 150 students and others who shared their view would be in the audience of 5,000 people. Mrs. Bush decided to honor her speaking obligation, knowing that these 150 students are speaking obligation.
diffused most of this hostility by presenting a speech that stressed that everyone should follow her personal dream and be tolerant of the dreams of others: For over fifty years, it was said that the winner will be the first to become a C.E.O. Both of these
stereotypes show too little tolerance. . . . So I offer you today a new legend: the winner of the hoop race will be the first to realize her dream, not society's dream, her own personal dream. 19 426-456 Ch14 Adler 2/28/05 10:02 AM Page 445 CHAPTER 14 ETHICAL CHALLENGE ADAPTING TO A HOSTILE AUDIENCE PERSUASIVE SPEAKING 445
How far would you go in adapting to a hostile audience? What forms would that adaptation as an example. You can make up the speech situation or choose one of the following: 1. Speaking before a group of advertising executives about your firm belief that there should
be heavy governmental penalties for false or deceptive advertising 2. Speaking before a group of Catholic bishops about your belief in reproductive choice 3. Speaking before a group of animal rights advocates about advances in interspecies (animal to human) organ transplants BUILDING CREDIBILITY AS A SPEAKER Credibility refers to the
believability of a speaker. Credibility isn't an objective quality; rather, it is a perception in the minds of the audience. In a class such as the one you're taking now, students often wonder how they can build their credibility. After all, the members of the class tend to know each other well by the time the speech assignments roll around. This familiarity isn't an objective quality; rather, it is a perception in the minds of the audience. In a class such as the one you're taking now, students often wonder how they can build their credibility.
illustrates why it's important to earn a good reputation before you speak, through your class comments and the general attitude you've shown. It is also possible for credibility (what you have when you first get up to speak), derived credibility (what you acquire
 while speaking), and terminal credibility (what you have after you finish speaking). It is not uncommon for a student with low initial credibility, you won't be able to convince your listeners that your ideas are worth accepting even if your
material is outstanding. On the other hand, if you can develop a high degree of credibility in the eyes of your listeners, they will be likely to open up to ideas they wouldn't otherwise accept. Members of an audience form judgments about the credibility of a speaker based on their perception of many characteristics, the most important of which might be likely to open up to ideas they wouldn't otherwise accept. Members of an audience form judgments about the credibility in the eyes of your listeners, they will be likely to open up to ideas they wouldn't otherwise accept.
called the "Three Cs" of credible, we must be credible, we must be believable, we must be believable, we must be credible, we must be c
that will lead your audience to regard you as an authority on the topic you are discussing. If everyone in the audience knows you've earned big profits in the stock market, they will probably take your investment advice seriously. If you say that you lost twenty-five pounds from a diet-and-exercise program, most audience members will be likely to
respect your opinions on weight loss. The other way to be seen as competent is to be well prepared for speaking. A speech that is well researched, organized, and presented will greatly increase CULTURAL IDIOM roll around: occur, arrive on the other hand: from the other point of view 426-456_Ch14_Adler 446 2/28/05 PART FOUR 10:02 AM Pagearched, organized, and presented will greatly increase CULTURAL IDIOM roll around: occur, arrive on the other point of view 426-456_Ch14_Adler 446 2/28/05 PART FOUR 10:02 AM Pagearched, organized, and presented will greatly increase CULTURAL IDIOM roll around: occur, arrive on the other point of view 426-456_Ch14_Adler 446 2/28/05 PART FOUR 10:02 AM Pagearched, organized, and presented will greatly increase CULTURAL IDIOM roll around: occur, arrive on the other point of view 426-456_Ch14_Adler 446 2/28/05 PART FOUR 10:02 AM Pagearched, organized, and presented will greatly increase CULTURAL IDIOM roll around: occur, arrive on the other point of view 426-456_Ch14_Adler 446 2/28/05 PART FOUR 10:02 AM Pagearched, organized, and presented will greatly increase CULTURAL IDIOM roll around: occur, arrive on the other point of view 426-456_Ch14_Adler 446 2/28/05 PART FOUR 10:02 AM Pagearched, organized, and occur, arrive on the other point of view 426-456_Ch14_Adler 446 2/28/05 PART FOUR 10:02 AM Pagearched, organized, and occur, arrive on the occur
446 PUBLIC COMMUNICATION CULTURAL IDIOM down-to-earth: practical boomerang: create a negative effect the audience's perception of the speaker's competence. Your personal credibility will therefore be enhanced by the credibility of your evidence, including the sources you cite, the examples you choose, the way you present statistics, the
quality of your visual aids, and the precision of your language. Character Competence is the first component of being believed by an audience. The second is being trusted, which is a matter of character involves the audience. The second is being trusted, which is a matter of character involves the audience. The second is being trusted, which is a matter of character involves the audience. The second is being trusted, which is a matter of character involves the audience. The second is being trusted, which is a matter of character involves the audience.
(without boasting, of course) that demonstrate your integrity. You might describe how much time you spent researching the subject or demonstrate your investigation. For example, if you were giving a speech arguing against a proposed tax cut in your community, you
 might begin this way: You might say I'm an expert on the municipal services of this town. As a lifelong resident, I owe a debt to its schools and recreation programs. I've been protected by its police and firefighters and served by its hospitals, roads, and sanitation crews. I'm also a taxpayer who's on a tight budget. When I first heard about the tax cut of the tax cut of the contract of the co
that's been proposed, I liked the idea. But then I did some in-depth investigation into the expenses and into the expenses of similar communities where tax cuts have been mandated by law. Charisma Charisma is spoken about in the
popular press as an almost indefinable, mystical quality. Even the dictionary defines it as "a special quality of leadership that captures the popular imagination and inspires unswerving allegiance and devotion." Luckily, communication scholars favor a more down-to-earth definition. For them, charisma is the audience's perception of two factors: the
speaker's enthusiasm and likability. Whatever the definition, history and research have both shown us that audiences are more likely to be persuaded by a charismatic speaker than by a less charismatic one who delivers the same information. Enthusiasm is sometimes called "dynamism" by communication scholars. Your enthusiasm will mostly be
 perceived from how you deliver your remarks, not from what you say. The nonverbal parts of your speech will show far better than your enthusiasm? Do your facial expression and eye contact show you care about your audience? You can
 boost your likability by showing that you like and respect your audience. Insincere flattery will probably boomerang, but if you can find a way to give your listeners a genuine compliment, they'll be more receptive to your ideas. Building your personal credibility through a recognition of the roles of competence, character, and charisma is an important
component of your persuasive strategy. When combined with a careful consideration of audience adaptation, persuasive purpose, it will enable you to formulate the most effective strategy possible. 426-456 Ch14 Adler 2/28/05 10:02 AM Page 447 CHAPTER 14 SAMPLE SPEECH The following speech was given by John
Coleman, a student at Berry College in Georgia. John was coached by Randy Richardson and Chip Hall, and won third place at the 2004 Interstate Oratorical Association Annual Contest, which was held at Glendale Community College in Arizona. John's topic was one that he cared deeply about: Growing up in the Deep South, I gained an appreciation
of rhetoric from the men who had changed my world: Abraham Lincoln, Martin Luther King, and Malcolm X, among others. The passion with which these men defended human rights abuse—enthralled me from an early age. My second semester
college I took a class entitled "Slavery in the Age of Freedom," analyzing the historical tensions between slavery and our founding ideals, and I read as much on the subject of American slavery as I could digest. Knowing this, it will not come as a surprise that when an alumnus of the Berry forensics program emailed my coach and me with a National
Geographic article on the topic of modern-day slavery I was hooked. There simply was no other topic for me. If you don't care about your subject no one else will, and there is something particularly keen in the human mind that picks up on emotional dishonesty. 21 John's general purpose was to persuade, and his specific purpose could be expressed in
the following purpose statement: After listening to my speech, my audience will help me spread the word about the problem of modern slavery. John's thesis statement, which suggests a proposition of policy, might be worded as follows: We should do what we can to stop modern slavery. John's concern with his credibility as a speaker began with his
research on this topic: The research process started, for me, in the Berry College Library. The first publication I referenced was National Geographic, the magazine from which the topic arose, and I followed the sources they cited to see what else I could gather. There were a number of organizations, like Free the Slaves (at www.freetheslaves.net),
that proved essential to my research, and each source gave me new leads to follow. It is important to find the most reputable information available in order to gain credibility for the speech, particularly as I had no preexisting authority (I was only a 22-year-old, middle-class, white American college student, after all), and sourcing out good articles
from publications like National Geographic can lead you to all the right places. Each piece of evidence that John chose, therefore, was subjected to a test that kept both credibility and ethics in mind: Building from these sources, it was simply a matter of looking at the data in a fair way, and taking those statistics and anecdotes that seemed accurate
fair, and reasonable. If the New Yorker, National Geographic, and the State Department all agreed that 27 million people were enslaved (they did), then my numbers were solid. If one lessreputable source claimed that number was closer to 400 million, I had to throw out PERSUASIVE SPEAKING 447 426-456 Ch14 Adler 448 2/28/05 PART FOUR
10:02 AM Page 448 PUBLIC COMMUNICATION that number despite the impact it might have on my audience will be intelligent and attentive. If something is so outrageous as to sound inflated or illogical, they will pick it up. It is better to evaluate
 the reasonableness of the numbers you encounter. John was also concerned with audience analysis from the start. He knew that his forensics-contest audience had interests in rhetoric and American history, so he tailored his approach for them: Modern-day slavery, particularly as it occurs in Asia and Africa, might seem distant to many of the people
to whom I would have to deliver my speech. However, connecting modern-day slavery with our nation's own slave tradition was a way in which I could bring the topic home. I knew a lot about the topic of African slavery in the United States, and to establish a rhetorical framework for the speech, I decided to let the great abolitionists of our history
speak for me. I researched the speeches of William Lloyd Garrison, Frederick Douglas, Abraham Lincoln, and others, and I gathered quotations from them. I felt they could draw the audience in to the horrors of modern-day slavery—something for which most of them had no frame of reference. Along with common ground, John also considered the
diversity of this audience: I would be speaking to Republicans and Democrats, Asians and Democrats, Asians and Democrats, Asians and businesspeople, and the very diversity of those individuals required me to construct a speech with broad appeal and employ language that would not alienate anyone. If I were too quick to demonize corporate America or the existing
 administration, many people who otherwise might have been sympathetic to my cause would quickly dismiss me. John used a problem-causes-solutions organization. His persuasive structure can be seen in the following outline. (Parenthetical numbers refer to paragraphs in the speech.) Introduction I. Attention-getter (1-2) II. Preview of main points
(3) Body I. Modern slavery is a far more extensive problem than you would assume. (4-7) A. Worldwide numbers are devastating. (5) C. U.S. numbers are devastating. (6) D. U.S. sex tourism also supports slavery. (7) II. Modern slavery has three prominent causes. (8-11) A.
                                    profitable. (9) B. Slavery thrives on the cooperation of corrupt corporations and local governments. (10) C. Slavery has been ignored by our own country. (11) III. Modern slavery can be fought on three fronts. (12-15) A. On the governmental level, laws can attack the problem. (13) B. On the corporate level, boycotts can
attack the problem. (14) C. On the personal level, your actions can attack the problem. (15) 426-456 Ch14 Adler 2/28/05 10:02 AM Page 449 CHAPTER 14 PERSUASIVE SPEAKING 449 Conclusion I. Review of main points (16) II. Final remarks (16) As you read John's speech, notice how he expands on this outline as he develops his argument point by
point. FREE THE SLAVES 22 John Coleman 1 "On this subject I do not wish to think, or speak, or write with moderation . . . No! I will not equivocate; I will not retreat a single inch, and I will be heard." Fortunately, abolitionist William Lloyd Garrison was heard. By 1865, our country had spilt the blood of its sons and daughters to redeem the blood of
its slaves. By the late 1800s, slavery was extinguished from the earth. 2 Or was it? According to National Geographic of September 2003, far from extinguished, in recent years this not-so-peculiar institution has thrived—now claiming more lives than were bought and sold in four centuries of the Atlantic slave trade. 27 million people. 120
nations. Terrorizing mothers, fathers, sons, and daughters, the persistence of the institution the State Department called, in a June 25, 2003 congressional hearing, "the emerging human rights issue of the 21st Century," slavery now warrants our attention and response. 3 So, in order to fight an evil six millennia in the making, we will first look to the
problem of modern slavery. Second, we will examine its causes, and, finally, we will look into some ways in which we can fight these abuses today, and assure that, absent equivocation or moderation, the long-suffering voices of 27 million can now be heard. 4 In his September 23, 2003 address to the United Nations, President George W. Bush
proclaimed of the modern slave trade, "There's a special evil in the abuse and exploitation of the most innocent and vulnerable," and while the President notes correctly the cruelty of this institution, modern-day slavery has a different formulation than the racially based chattel slavery of the antebellum South. According to Dr. Kevin Bales, Director of
the Free the Slaves Foundation, modern slaves share several common characteristics—they are bought and sold, owned, mentally or physically abused, and forced to labor. We are not speaking of mere repression here, nor are all slaves sex-slaves or cocoa workers in the Ivory Coast; and, if anything, the number 27 million—excluding hundreds of
millions enduring child-labor and indentured servitude—is low. 5 The abuses themselves are devastating. According to Transitions Online of April 7, 2003, in Serbia and Montenegro, girls as young as fourteen are kept in box-sized rooms where, raped, beaten, and scarred by cigarette burns and tooth marks, they are forced to service customers in the
same area in which they sleep and eat. Abortion is forced. Disease is common. Hope is a fantasy. According to the Africa News of July 11, 2003, in Nigeria, where slavery estimates range upwards of 900,000 people, young girls are trafficked into countries like Italy each year. This article tells of two of them, ages 13 and 14, locked in dehydration so
desperate they had to urinate for each other to drink so that they would not die. In Europe, Community Care of August 7,2003 tells of a 7-year-old boy purchased like a sacrificial lamb on the international slave market and reduced to a multilated torso in ritual killings. The attention-getting quotation was specifically chosen for an audience interested in
history and speech. Research, including statistics and testimony from highly credible sources, sets the mood and tone of the speech. Preview of main points. Testimony and statistics used as evidence. 426-456 Ch14 Adler 450 2/28/05 PART FOUR 10:02 AM PUBLIC COMMUNICATION The importance of
this topic to an American audience is established . . . . . . through both testimony and statistics are carefully attributed to bolster credibility. John carefully supports this plank of his argument with a careful and concise citation of evidence from a variety of sources. Comparison/contrast
is used to support this point. Transition and preview of next main point with subpoints. Each of John's proposed solutions focuses on the part that can be played by audience members. Page 450 6 And if you think these abuses are confined to war-torn countries thousands of miles from home, you are wrong. According to the State Department's 2003
Trafficking in Persons Report, there are now more than 100,000 slaves living and dying in the United States—with 18,000-20,000 new slaves crossing the border each year. In April of 2003, the New Yorker reported on massive slave plantations in south Florida where immigrants were smuggled, forced to labor, and beaten or killed if they try to escape
 —all in tomato fields and orange groves funded by the likes of Taco Bell. 7 According to Attorney General John Ashcroft in a speech on January 29, 2004, the Justice Department is currently investigating 142 such cases; and what we can't get at home, we get abroad. According to the Associated Press of September 24, 2003, Americans currently
account for approximately 25% of the sex tourism industry—a system responsible for the rape and abuse of thousands of young boys and girls in developing nations. And with abuse and debasement so sickening, it is easy to echo Garrison's denouncement of moderation and insistence on being heard. 8 However, these 27 million voices have largely
gone unheard, and while the causes are as numerous as the problems, the most important are three—increasing profitability, the cooperation of corporations and the failure of societal safety nets, slavery has become the world's
most profitable institution. According to House Committee Chair Dan Burton's Congressional Testimony of October 29, 2003, while the average slave costs around $40,000 in today's money in 1850, that cost has fallen to $150 today, and as slaves can generate revenues of up to $80,000 per year, the costs and benefits of this transaction form a deadly
combination. 10 However, corporations must provide these profits and governments must overlook them, and as rescue worker Sompop Jantraka noted on CNN of September 25,2003, "Corruption is everywhere." According to The Nation of June 30, 2003, corporate cooperation with slave practices abroad is nothing new. The Unocal Corporation
supported slavery in Burma for years, and, more recently, companies like Pepsi and Exxon Mobil have fallen under the same scrutiny. According to the LA Times of March 5, 2004, Taco Bell has been implicated in such practices domestically, and according to the American Journalism Review of June/July 2003, the tally of those complicit in these
practices extends beyond corporations to NATO officials, UN peacekeepers, and local district attorneys. 11 Finally, the half-hearted efforts of our own nation are at least partially to blame. According to the Weekly Standard of October 6, 2003, while the United States spends more than $1 billion to fight the drug trade every year, we spend only $60
million to fight slavery. In the United Nations that number is $450,000, and this combined expenditure of $2 per slave does not constitute a spending priority. While our government has declared a war on terror, it appears that our willingness to combat the terror of slavery is lukewarm to say the least. 12 In his autobiography, Frederick Douglas noted
that "The limits of tyrants are prescribed by the endurance of those whom they oppose." And in the fight against modern slavery, endurance will be key on three levels: governmental level, the Bush administration has made efforts to combat slavery, but those efforts must now become a priority.
According to the 426-456 Ch14 Adler 2/28/05 10:02 AM Page 451 CHAPTER 14 Cox News Service of March 4, 2004, in September of last year, the first U.S. citizen was prosecuted under a new law that makes it illegal to travel abroad to have sex with children in slavery, and other such simple measures are necessary to combat this growing epidemic.
According to freetheslaves.net, you can write your congressional representative about a variety of such issues, and this Web site provides you with the forum to do so. 14 Second, you can direct similar efforts against the corporations that fund these practices. According to Forbes of April 28,2003, many organizations such as the International Labor
Rights Fund have already begun to bring suits against those corporations complicit in the slave trafficking practices of their business partners abroad, and you can support them in these efforts. According to the University Wire of March 1, 2004, the "boot the bell" campaign has already started to remove Taco Bell from dozens of college campuses and
boycotts are still effective. Remember, you are not powerless, and if there is one group that corporations must listen to, it is us, the consumers. 15 Finally, take personal action. According to the previously cited New Yorker, concerned citizens first exposed slave abuses in South Florida, and remain the greatest tool for the liberation of this nation's
100,000 slaves. Be aware, and report abuses when you see them. Finally, Satya of June/July 2003 says that you can support one of many international organizations like Bal Vikas Ashram in India which raids slave camps and rescues and raises the children they free. I've brought a list of the most pertinent of these organizations, so that you, if you like,
can donate your money or your time. Both are desperately needed. 16 In an 1858 speech, Abraham Lincoln closed saying, "I leave you, hoping that the lamp of liberty will burn in your bosoms until there shall no longer be a doubt that all men are created free and equal." Today, we have examined the problems and causes of slavery, and taken the first
steps towards the eradication of this vile institution. In fact, in January of this year, the United Nations declared 2004 the International Year to Commemorate the Struggle Against Slavery and its Abolition, and just as Garrison, Lincoln and Douglas had their time, our generation's time has come. Now let us seize this opportunity, and issue forth an
emancipation proclamation for all the world to hear. PERSUASIVE SPEAKING 451 Specific examples of actions against corporations bolster his argument about the effectiveness of this solution. moving someone, through communication, toward a belief, attitude, or behavior—can be both worthwhile and ethical. Ethical persuasion be in the best interest of the audience. Persuasion can be categorized according to the
type of proposition (fact, value, or policy), outcome (convincing or actuating), or approach (direct or indirect). A persuasive purpose, structuring the message carefully, using solid evidence (including emotional evidence), using careful
reasoning, adapting to the audience, and building credibility as a speaker. A typical structure for a speech to actuate, you also have to ask for a desired audience response. The basic threepronged structure can be adapted to more elaborate persuasive
plans, but the basic components will remain a part of any persuasive strategy. For each of these components, you need to analyze the arguments your audience will have against accepting what you say and then answer those arguments your audience will have against accepting what you say and then answer those arguments your audience will have against accepting what you say and then answer those arguments.
audience, you should establish common ground, organize your speech in such way that you can expect a "yes" response along each step of your persuasive plan, and take special care with a hostile audience. In building credibility, you should keep in mind the audience's perception of your competence, character, and charisma. KEY TERMS actuate

458 INTERVIEWING CULTURAL IDIOM comes into play: has a use 🔳 🗖 A potential employer greets a job applicant: "Let's begin by talking about exactly why you're interested in this opening." A student meets with a professor during office hours: "I wasn't very happy with my grade on the last paper. I'd like to see where the problem was so I can
do better on the final." A customer replies to the salesperson's offer of help: "I've been thinking about buying a CD player, and I've heard that you've spent a lot of time in the mountains. I was hoping you could suggest some trails about buying a CD player, and I've heard that you've spent a lot of time in the mountains. I was hoping you could suggest some trails about buying a CD player, and I've heard that you've spent a lot of time in the mountains. I was hoping you could suggest some trails about buying a CD player, and I've heard that you've spent a lot of time in the mountains. I was hoping you could suggest some trails about buying a CD player, and I've heard that you've spent a lot of time in the mountains. I was hoping you could suggest some trails about buying a CD player, and I've heard that you've spent a lot of time in the mountains.
and tell me what to expect." Mention the word interview, and most people will think of a news correspondent questioning some public figure or a job applicant facing a potential employer. Though these images are accurate, they tell only part of the story. We all take part in interviews. Some are work related, determining whether you will get the job
you want and how you will do after you have landed the position. Others center on important personal relationships, focusing on everything from finding the perfect birthday gift to solving personal problems. Interviewing also comes into play when you want to learn important information from people with whom you aren't personally involved, perhaps
about school, vacationing, how to fix a car, where to find a good restaurant, or what it was like to meet a famous person. Some interviews are formal, and others are casual. Sometimes you are the one who asks the questions; sometimes you are the person who responds. But in all these cases, the ability to get and give information is an important one.
THE NATURE OF INTERVIEWING What is interviewing as a form of oral communication experts would agree with a definition of interviewing as a form of oral communication involving two parties, at least one of whom has a
preconceived and serious purpose, and both of whom speak and listen from time to time. This description tells us several important characteristics of interviewing. The phrase oral communication emphasizes the critical role of the spoken word. A verbal interview is far superior to a written one in several ways. A spoken exchange gives the interviewer a
chance to follow up on ideas that emerge as important. Another advantage of face-to-face interviewing comes from the nonverbal messages that accompany a spoken exchange. Tone of voice, emphasis on certain words, disfluencies such as stammers and stutters, and the other paralinguistic clues we discussed in Chapter 5 add a new dimension to any lead to the company a spoken exchange. Tone of voice, emphasis on certain words, disfluencies such as stammers and stutters, and the other paralinguistic clues we discussed in Chapter 5 add a new dimension to any lead to the company as poken exchange.
interaction. For the same reason, in-person interviewing with its accompanying postures, facial expressions, and so on offers more information. There are certainly cases when one person is questioned by a panel of interviewers and
other cases when two or more respondents face a single interviewer. But no matter how many participants are involved, in every case interviews are bipolar: One person or group is exploring issues with another person or group. 457-480_AppendixI_Adler 2/28/05 10:03 AM Page 459 APPENDIX TABLE 1 INTERVIEWING Types of Interviews Selection

commercial selling (charitable, political, religious, and so on) Personal interest Survey (market, political, and so on) Journalistic When we say that at least one party has a preconceived and serious purpose, we distinguish interviews from casual interactions in which the only goal is to pass the time. The fact that an interview has a serious purpose
doesn't mean that enjoyment is against the rules—simply that the goal goes beyond sociability. The words both of whom speak and listen from time to time make it clear that interviews are exchanges involve questions and answers. If either the speaker or the listener dominates the situation, then the
interaction becomes a public-speaking situation even though there may be only one person in the audience. TABLE 2 Subjects of Interviews Job Related Consumer Investigating services Employee grievance Other Counseling

10:03 AM Page 460 INTERVIEWING CULTURAL IDIOM drawing out: extracting or eliciting How Interviews differ from Conversations.1 PURPOSE We have already seen that conversations can occur without
the participants having any serious preconceived purpose: Two people chat between floors in an elevator; friends swap jokes at a party; a boss and employees take a break around the coffee machine. An interview, on the other hand, always has a purpose. STRUCTURE Conversations can be aimless affairs in which neither person knows (or cares) when
the exchange will end or exactly what topics will be covered. Any good interview, by contrast, has several distinct parts, which we'll discuss in a few pages. CONTROL Whereas conversations don't require any guidance from one of the parties, an interviewer should always be acting in ways that keep the exchange moving toward the preconceived
purpose. BALANCE Though most conversations involve roughly the same amount of input from each person, authorities on interviewee doing most of the talking. PLANNING THE INTERVIEW A good interview begins long before you sit down to face the other
person. There are several steps you can take to boost your chance for success. The Interviewer's Role Although the interviewer's responses will determine whether the interviewer, get the most out of the other person. As you read
on, think about the personal interviewing situations you identified in the exercise you just completed. (If you haven't done the exercise, do so now before reading on.) CLARIFY THE PURPOSE AND CONTENT AREAS What do you want to accomplish in the interview? The answer to this question will often seem obvious. For example, in an information-
gathering interview, you might want to find the best places to go on an upcoming vacation or to find out more about "the old days" from an older relative. But often a purpose that seems clear will prove too vague to get you what you want. For example, your questions about a vacation could result in a list of places too expensive for you or unrelated to
your interests. In the same way, your request for information about the old days could bring on a string of stories about long-dead (and uninteresting) relatives when you are really interested in events rather than personalities. The more clearly you can define the goal of your interview, the greater your chance for success will be. One way to set clear
goals is to think about specific 457-480_AppendixI_Adler 2/28/05 10:03 AM Page 461 APPENDIX content areas you'll need to explore to achieve your general purpose. See how this process of focusing on a goal works in the following situations: GENERAL GOAL SPECIFIC CONTENT AREAS Learn best place to go Discover affordable, beautiful place
that is different from home Learn about old days Learn how daily routines differed from now, how area looked before it was built up, what social relationships were like, what people did for recreation Choose best roommate to fit with present occupants of apartment Find person with similar or compatible study habits, dating life, ideas about neatness
also, person must be financially responsible Get mechanic's opinion about whether I should fix up present car or get a newer one; determine life expectancy, performance, mileage of old versus new DEVELOP TENTATIVE QUESTIONS More than any other factor, the quality of
the interviewer's questions and the way they are asked will determine the success or failure of an interviewer. After you define your goals and content objectives, the next step is to develop a list of questions. You need to think about several factors in planning questions: 1
Relationship to Purpose Your questions should cover all the content objectives you developed in the previous step. Furthermore, it's important to cover each area in the amount of depth that suits your needs. For example, in interviewing an instructor about how best to prepare for an exam, you should briefly cover the areas you feel confident about
while spending enough time on tougher areas to be sure you're prepared. This suggestion may seem obvious, but many inexperienced interviewers find to their dismay that they have wasted most of their time discussing trivial areas and have failed to get their most important questions answered. 2. Factual versus Opinion Questions Some questions
involve matters of fact: "What's the difference between an integrated amplifier?" or "How many points will I need to earn an A for the course?" These can be called factual questions. In other cases, you'll want to ask opinion questions: "What occupations do you think will offer the best chance for advancement in the next few years?"
or "How do you think I should go about apologizing?" When planning an interview, you should ask yourself whether you're more interested in facts or opinions and plan your questions accordingly. In some cases, you can approach a question either factually or subjectively, often with quite different results. For example, imagine that you're
interviewing two close friends, trying to resolve a conflict between the disputants) and "What are some of the things bothering each of you?" (a factual question that doesn't call for the parties to read each of you?" (a factual question that invites disagreement between the disputants) and "What are some of the things bothering each of you?" (a factual question that invites disagreement between the disputants) and "What are some of the things bothering each of you?" (a factual question that invites disagreement between the disputants) and "What are some of the things bothering each of you?" (a factual question that invites disagreement between the disputants) and "What are some of the things bothering each of you?" (a factual question that invites disagreement between the disputants) and "What are some of the things bothering each of you?" (a factual question that invites disagreement between the disputants) and "What are some of the things bothering each of you?" (a factual question that invites disagreement between the disputants) and "What are some of the things bothering each of you?" (a factual question that invites disagreement between the disputants) and "What are some of the things bothering each of you?" (a factual question that invites disagreement between the disputants) and "What are some of the things bothering each of your each of yo
other's minds). Again, you need to think clearly about whether you're seeking facts or opinions. INTERVIEWING 461 457-480 Appendix Adler 462 APPENDIX 2/28/05 10:03 AM Page 462 INTERVIEWING CULTURAL IDIOM holding up: assuming the responsibility for keeping the conversation going long-winded: speaking for a long time 3. Open
versus Closed Questions You have almost certainly had the frustrating experience of trying to draw out an uncommunicative partner: You: How've you been getting a lot of exercise? Other: Not really. Although the respondent here could
have certainly done better at holding up the other end of the conversation, much of the problem grew out of the type of questions being asked. All of them were closed; question, less outgoing ones will give you the briefest response
possible. The best way to encourage interviewees to speak up is by asking open questions, which require the subject to answer in detail:
happened." Developing good open questions takes time and thought. Questions that are poorly worded or ones that are too broad or too narrow to get the information you seek can be a waste of time. 2 A good list of open-ended questions can help in several ways. First, you will almost certainly have enough lengthy responses to fill the allotted time
soothing a common fear of inexperienced interviewers. Your open questions, inviting comment as they do, will also make your subject feel more comfortable. Second, the way in which your subject chooses to answer your open questions, inviting comment as they do, will also make your subject feel more comfortable. Second, the way in which your subject chooses to answer your open questions, inviting comment as they do, will also make your subject feel more comfortable. Second, the way in which your subject feel more comfortable.
which can be answered in a few words. Closed questions are appropriate for some subjects to answer, and you can ask many of them in a short period of time. Also, closed questions are appropriate for some subjects to answer, and you can ask many of them in a short period of time. Also, closed questions are appropriate for some subjects. For example, you wouldn't want longwinded replies to questions such as "What's the cost of part #1234?" or
"What is your Social Security number?" As an interviewer, you should decide what type of information you need and then choose the combination of open and closed questions that will get it for you. 4. Direct versus Indirect Questions that type of information is to ask a direct question:
kind of work?" Index much were you planning to spend for a new coat?" Index direct question. It one time or another, most of us have been so confused that we've answered the question "What don't you
understand?" by replying in exasperation, "Everything!" At other times, you've heard yourself or someone else sincerely an- 457-480 Appendix Adler 2/28/05 10:03 AM Page 463 APPENDIX swer the question "Do you understand?" in the affirmative, only to find out later that this wasn't true. There are also times when a subject might be able to
answer a question sincerely but isn't willing to do so. This sort of situation usually occurs when a candid answer would be embarrassing or risky. For instance, when interviewing a prospective roommate, you'd be naive to ask, "Do you always pay your share of the rent on time?" because a truly shifty person would probably answer "yes." At times like
these it's wise to seek information by using indirect questions, which do not directly request the information you are seeking. You could ask potential roommates whether their share of the rent money would be coming from current work (then check to see if they're employed) or from savings. In the same way, instead of asking, "Are you creative?" a
prospective employer might present a job applicant with a typical or hypothetical situation, looking for an innovative solution. 5. Primary versus Secondary Questions Sometimes you will need to ask only an initial, primary question to get the fact or opinion you need in a given content area. But more often you will need to follow up your first question
with others to give you all the information you need. These followups are called secondary questions: "In your opinion, who are the best people for me to ask about careers in the computer field?" Secondary Questions: "How could I meet them?" "Do you think they'd be willing to help?" "How could each one help me?" Sometimes an
interviewer can follow up with secondary responses that aren't really questions. Simple probes—interjections, silences, and other brief remarks—can open up or direct an interviewee and uncover useful information. Interviewer are you looking for in a phone system? Respondent: Flexibility is the most important thing for us. Interviewer
Flexibility? Respondent: Yes. We want to be able to add new phone lines in the future without having to replace the whole system. Even silence or a well-timed nod of the head can trigger a good response: Manager: How would you rate yourself in your first month on the job? Employee: Oh, not bad. Manager: Uh huh. (pauses) Employee: I've learned a
lot about the inventory system, but I'm having a hard time remembering the names of all our important customers. It can be smart to develop a list of secondary questions to each primary one. In many cases, however, the best follow-ups will occur to you during the interview, depending on how the respondent answers your first question. As you ask
and probe, be sure each secondary question you ask helps achieve your goal. It's easy to wind up taking an interesting digression, only to discover that you didn't get the information you were after. 6. Neutral versus leading questions A neutral question gives the interviewee a chance to respond without any influence from the interviewer. By con-
INTERVIEWING 463 CULTURAL IDIOM shifty: deceptive, dishonest to wind up: to bring to an end, to finish 457-480_AppendixI_Adler 464 APPENDIX 2/28/05 10:03 AM Page 464 INTERVIEWING CULTURAL IDIOM a crisis hot line: an agency that provides telephone callers with immediate help for serious personal problems trast, a leading question
is one in which the interviewer—either directly or indirectly or indirec
take the job if it's offered, won't you? I've worked very hard on this idea, and I'm proud of it. What do you think? What examples of sexism have you seen at this college? Although it seems hard to justify ever asking leading questions, there are a few situations where they serve a legitimate purpose. As Table 3 illustrates, they involve trying to either
persuade or test the interviewee. Other than these situations, leading questions can distort the information you are seeking—hardly the outcome you're seeking—hardly the outcome you're seeking in most interviewes. 7. Hypothetical questions a hypothetical question seeks a response by proposing a "what-if" situation. This type of questions can be useful when you want to determine how
 an interviewee might think or act in the future. For example,if you aren't sure whether to enroll in a certain course due to the demands of your busy personal life, you might ask the professor, "How would you feel if I asked for a deadline extension for a major assignment?" Hypothetical questions can also encourage interviewees to offer information
they wouldn't volunteer if asked directly. For instance, a potential employer might get self-serving answers by asking job candidates about their strengths and weaknesses. But the hypothetical question "What would your last boss describe as your greatest strengths and weaknesses." could reveal interesting information. Hypothetical questions also
are a good way to encourage respondents to think of a topic they haven't considered before. The coordinator of a crisis hot line invited prospective coaches to consider whether they were emotionally prepared to deal with a variety of difficult situations: child abuse, sexual violence, and so on. By thinking about the difficult parts of the job, the
prospective coaches got a better sense of whether they were prepared to take on the responsibilities of being a coach. ARRANGE THE SETTING Even the best questions won't help an interview that takes place in a bad setting. To avoid such problems, keep two considerations in mind as you arrange a meeting with your subject. The first is time. Just as
you should pick a time that is convenient for you, it's equally important for you to do the same for the interviewee. When arranging an appointment with your interviewee, be sure you've avoided predictably busy days or hours when the press of unfinished business may distract your interviewee. If you can, tactfully discover whether the interviewee is a
morning or evening person—some people function especially well or poorly at certain times of the day. You should also make sure that the interviewee doesn't have appointments or other obligations that will overlap with your scheduled time. 457-480 Appendix Adler TABLE 3 2/28/05 10:03 AM Page 465 Uses of Ouestion Types OPEN AND CLOSED
QUESTIONS Use Open Questions To: Make the interviewee feel relaxed. (The question should be easy to answer and nonthreatening.)
What do you think about the way women are treated around here? Suppose you had thirty seconds to persuade a prospective customer to buy this product. . . . What would you describe the treatment you've received as fair or unfair? When you left
at 10:30 P.M., was there anyone remaining in the building? I know you can only spare a few minutes. In your opinion, what are the two or three most important things I should do to improve my chances? Which of the following best describes your level of education: (a) high school graduate, (b) attended college, (c) received bachelor's degree?
this might cost. Use Secondary Questions When: The previous answer was incomplete. Example You said the service you received was "fair." Can you explain what you meant? When I asked about your education, I should have explained that I meant since high school. Can you tell me about your college coursework? You said the cost was $19.95 per
making unannounced visits go overboard: do so much as to be excessive The second is place. The most important consideration is to have a place that is free of distractions. A telephone constantly ringing or other people dropping by to ask questions or chat can throw you and your interviewee off track. If any of your questions call for confidential
answers, the setting should be private. It's also important for the location to be convenient for both parties. Neither you nor the interviewee will do your setting should be comfortable and attractive enough to put your interviewee at ease. Don't
however, some things an interviewee can do in advance to make the interview a good one. CLARIFY THE INTERVIEWER'S GOALS It's important to know just what the interviewer is seeking from you. Sometimes the interviewer's goals are obvious. The insurance sales representative who wants "to see if you're paying too much for your present
coverage" is trying to sell you a new policy, and a friend who wants to know how you've repaired an object or fixed a recipe is probably looking for your expertise. At other times, the interviewer's goals aren't quite so obvious. Sometimes you know the general goal of the interview but need to understand the specific content areas more clearly. For
example, suppose you are preparing for an employment interview. You know that the company is looking for the best applicant to fill the job. But just what kinds of qualities is it seeking? Are education and training the most important? Experience? Initiative? Knowing these criteria in advance will boost your chances of doing well in the interview.
There will be times when an interviewer has hidden goals, which you should do your best to discover. For instance, your boss's questions about factual information might really be aimed at
building a friendship. This last example shows that not all hidden goals are malicious, but in any case you'll feel more comfortable and behave more effectively when you know what the interviewer wants from you. CLARIFY YOUR OWN GOALS Sometimes the interviewee's only role in an interview is to help the interviewer. But there are other times
career when you're a boss. Keep your own goals in mind when thinking about the upcoming interview. 457-480_Appendix_Adler 2/28/05 10:03 AM Page 467 APPENDIX DO YOUR HOMEWORK There are many cases in which an interviewe can make an interviewe can make an interviewe can make an interview run quickly and well by preparing materials or answers in advance. If you know that the
interviewer will be seeking certain information, get it together before your meeting. Sometimes an interviewee should collect materials. For instance, an interviewee describing what college is like to a graduating high school senior
might bring along class schedules, catalogs, textbooks, and exams. CONDUCTING THE INTERVIEW Preparation is an important step in interviewer and interviewer and interviewe An interview An interview, like the speeches you read about in
Chapters 10-14, has three distinct stages. 4 OPENING This beginning stage serves two important functions. Most important, it establishes the tone of the relationship between interviewee: formal or informal, relaxed or tense, serious or humorous. Just as the first stages of a date or party will generally shape what comes later, the success
or failure of an interview is often determined in the first exchange. Besides setting the tone, a good introduction will also give the interviewee a preview (or reminder) of the interviewee's goals and what subjects will be covered. The usual format for an opening begins with some sort of greeting, which includes any introductions that are necessary. A
period of informal conversation sometimes follows, in which the interviewer and interviewer an
need to discuss obviously trivial subjects or act phony here: The idea is to establish some common ground sincerely between interviewer and interviewer and interviewee on plans for proceeding: "I appreciate your giving
me the time. I expect my questions will take about forty-five minutes. I'd like to start by learning how you got started, then go on to talk about what you've learned during your career, and finish by asking for any suggestions you have that might help me in my career." BODY This middle stage of the interview is the longest. It's here that the interview experience of the interview is the longest. It's here that the interview experience of the int
asks the questions that were planned before the meeting. Although the list of questions is important, it's sometimes a mistake to follow them precisely. Some areas will need more exploration, whereas others won't seem worth pursuing. The trick in the body of the interview is to focus on all the important content areas in a way that seems most
comfortable to both interviewer and interviewer and interviewer. (We'll have more to say about the roles of each party shortly.) INTERVIEWING 467 457-480_AppendixI_Adler 468 APPENDIX 2/28/05 10:03 AM Page 468 INTERVIEWING CLOSING In many ways, the closing is a time for reviewing, however, the closing is a time for reviewing to the component of 
what's occurred during the interviewer has correctly understood any points that might be unclear and has gotten the general tone of the relationship between interviewee: to decide if any future meetings are necessary
possibly to set a date for them. Finally, it's usually good to conclude the interview with an exchange of sincere pleasantries. Table 4 is a checklist that summarizes the points to remember when planning, conducting, and evaluating an interviewe in a variety of ways. It can be
used before an interview by either party to prepare for a productive exchange. It can be used after an interviewee, or a third party to evaluate the effectiveness of both communicators. The Interviewer's Responsibilities Most interviewer, at least those who haven't received training—are
not especially effective at choosing the best candidate during employment interviewer's job is to ensure that each stage of the interviewe-opening, body, and closing—takes the right amount of time and that all important
content areas are covered. It's easy to get off on a tangent and discover too late that the available time is up. HELP THE INTERVIEWEE FEEL COMFORTABLE In simplest terms, this includes making sure that the setting is physically comfortable. But it's just as important that the interviewer use the listening, relational, and nonverbal skills we
discussed earlier in this book to help the interviewee feel at ease. For example, suppose the TABLE 4 Checklist for Evaluating Interviewe opening suppose the TABLE 4 Checklist for Evaluating Interviewe feel at ease. For example, suppose the TABLE 4 Checklist for Evaluating Interviewe feel at ease.
answers. Interviewee keeps on subject. Interviewee achieves own goals. Closing 🔳 🔳 Interviewee achieves own goals. Closing between interviewee achieves own goals. Because of either evasiveness or probes you can use as a problem of the evasiveness of evaluation of evasiveness or problem of evaluation of e
fuzzy thinking, interviewees sometimes need to hear a question several times before giving a full answer. Adult (breaking up fight between two children): Hey, what's this all about? Child A: He's a jerk! Adult: But what were you fighting about? Child A: I did not start
it. You started it! Adult: I don't care who started it. I just want to find out what you're fighting about. 2. Amplify. When an answer is incomplete, you need to get more information. Customer: Salesperson: Customer: Salesperson: I want to buy some running shoes. What kind of running do you do? Oh, mostly just for fun. I mean
how far do you run and on what kind of surfaces? I mostly run on the track at the high school . . . a few miles. When you say "a few miles," do you mean three or four each time you run or more? 3. Paraphrase. Paraphrase the speaker to
give more information about the topic. A: I'm so fed up with that class that I'm ready to drop it. I just wanted to talk it over with you before I did. B: So you're pretty sure that the right thing to do would be to quit because the class is giving you so much trouble. A: Well, I'm just not sure. The semester is almost over, and if I did drop it now, I'd just have
to repeat the class later. B: So you're really not sure what to do, is that it? A: Oh, I guess I ought to stick it out. It's just that I'm really tired. I'll sure be glad when the semester is over. 4. Use Silence and Prods. A bit of experimenting will show you the value of silence and prods—brief but encouraging phrases such as "Really?," "Uh-huh," "I see," and
"Tell me more about it." Often an interviewee will be anxious to talk about a topic if simply given a sympathetic and interested ear. The Interviewee to make the interviewee is Responsibilities There are several things you can do as an interviewee to make the interviewee to make the interviewee.
457-480 AppendixI Adler 470 APPENDIX 2/28/05 10:03 AM Page 470 INTERVIEWING CULTURAL IDIOM put yourself in the interviewer's shoes: consider the situation from the point of view of the interviewer an also-ran: an unsuccessful applicant GIVE CLEAR, DETAILED ANSWERS Put yourself in the interviewer's shoes and be as specific and
helpful as you hope others would be for you. Although the interviewer ought to draw you out skillfully, make that job easier by being helpful yourself. KEEP ON THE SUBJECT It is sometimes tempting to go overboard with your answers, sidetracking the discussion into areas that won't help the interviewer. It's often a good idea to ask the interviewer
whether your answers are being helpful and then to adjust them accordingly. CORRECT ANY MISUNDERSTANDINGS Sometimes an interviewer will misinterpret your message. When this happens, be sure to correct the mistaken impression. Of course, one way to be certain that the message was received correctly is to invite the interviewer to
paraphrase what he or she thinks you said. When an important issue is in question, any conscientious interviewer will be willing to do so. COVER YOUR OWN AGENDA As we pointed out earlier in this appendix, interviewees often have their own goals, which are sometimes different from those of the interviewer. It's important to keep these in mind
during the interview so that you can satisfy your own needs in a way that is compatible with the interview of a lifetime. A selection interview may occur when you are being considered for employment, but it
may also occur when you are being evaluated for promotion or reassignment. Being chosen for the position you seek depends on making a good impression on the person or people who can hire you, and your interviewing skills can make the difference between receiving a job offer and being an also-ran. Employment Strategies Most people naively
believe that the person with the best qualifications will get a job. Although this principle might be fair and logical, research shows that selection interviewes are easily biased by their own mood and by irrelevant characteristics of applicants. 7 In reality, the person who knows the most about getting
hired usually gets the desired position. Though job-getting skills are no substitute for qualifications after the actual work begins, they are necessary if you are going to be hired in the first place. The following guidelines will help your communication in interviews to give you the best chance of getting the job you deserve. What is the best strategy for
getting the job offer you want? The advice job seekers often get is certainly important: Scan sources of job announcements for positions, and prepare a thorough, professional résumé. But beyond these steps are other strategies that can often give you a critical boost over other applicants. 457-480_AppendixI_Adler 2/28/05 10:03 AM Page 471
APPENDIX BACKGROUND RESEARCH Your first step involves looking into all those areas that have interested you in the past. Through conducting library research, reading magazine and newspaper articles, taking classes, and simply fantasizing,
find out as much as possible about jobs that might be interesting to you. The result of your chosen field and help you make contacts. BACKGROUND INTERVIEWS At this point arrange to meet the people on the list you have just developed. These meetings are not
employment interviews in which you're specifically asking for the job. Rather, they serve three purposes: 1. To help you make contacts that might later lead to a job offer from your interviewer. It is hard to overstate the value of personal contacts in getting a job. According to a
survey by the U.S. Department of Labor, over 70 percent of the respondents learned about the job they held through contacts with people in their personal networks: friends, coworkers, relatives, and teachers.8 3. To develop leads about other people you might contact for help in your job search These background interviews are information gathering
in nature, so it's wise to read the section of this appendix that deals with this subject before beginning this step. Tips for the Interviewee After you are in the interview itself, there are several important points to keep in mind. MAKE A GOOD FIRST IMPRESSION First impressions can make or break an interview. Research shows that many
interviewers form their opinions about applicants within the first four minutes of conversation. Physical attractiveness is a major influence on how applicants are rated, so it makes sense to do everything possible to look your best. The basic rules apply, no matter what the job or company: Be well groomed and neatly dressed. The proper style of
clothing can vary from one type of job or organization to another. A good rule of thumb is to come dressed as you would for the first day of work. When in doubt it's best to dress formally and conservatively. It's unlikely that an employer will think less of you for being overdressed, but looking too casual can be taken as a sign that you don't take the job
or the interview seriously. COME PREPARED Come to the interview with materials that will help the employer learn more about why you are ready, willing, and able to do the job. Bring extra copies of your past work:
reports you've helped prepare, performance reviews by former employers, drawings or designs you have created in work or school, letters of commendation, and so on. Besides demonstrating your qualifications, items like these demonstrate INTERVIEWING 471 CULTURAL IDIOM rule of thumb: practical plan of action 457-480 Appendix Adler 472
APPENDIX 2/28/05 10:03 AM Page 472 INTERVIEWING CULTURAL IDIOM the personal chemistry: how two people get along with or react to each other pay off: produce successful results that you know how to sell yourself. Bring along the names, addresses, and phone numbers of any references you haven't listed in your résumé. FOLLOW THE
INTERVIEWER'S LEAD Let the interviewer set the emotional tone of the session. If he or she is informal, you can loosen up and be yourself; but if he or she is formal and proper, you should act the same way. A great deal depends on the personal chemistry between interviewer and applicant, so try to match the interviewer's style without becoming
phony. If the tone of the interview doesn't fit well with you, this may be a signal that you won't feel company, either by asking for a tour or speaking with other employees on your own. This desire to learn about the company shows that you
can meet the employer's needs. Here's where your background research will pay off: If you've spent time learning about your potential employer, you'll be in a good position to talk about that company's concerns and how you can satisfy them. Knowing that you can, indeed, help the company can boost your self-confidence and lead you to feel most
comfortable when facing a potential employer. 10 1. Tell me something about yourself. This broad, opening question gives you a chance to describe what qualities you possess that can help the employer. 2. What makes you think you're qualified to work for this company? This question may sound like an attack, but it really is another way of asking
"How can you help us?" It gives you another chance to show how your skills and interests fit with the company's goals. 3. What accomplishments have given you the most satisfaction? The accomplishments you choose needn't be directly related to former employment, but they should demonstrate qualities that would help you be successful in the job
for which you're interviewing. Your accomplishments might demonstrate creativity, perseverance in the face of obstacles, self-control, or dependability. 4. Why do you want to work for us? As the research cited in Table 5 shows, employers are impressed by candidates who have done their homework about the organization. This question offers you the
chance to demonstrate your knowledge of the employer's organization and to show how your talents fit with its goals. 5. What college subjects did you like most and least? Whatever your answer, show how your preferences about schoolwork relate to the job for which you are applying. Sometimes the connection between college courses and a job is
obvious. At other times, though, you can show how apparently unrelated subjects do illustrate your readiness for a job. For example, you might say, "I really enjoyed cultural anthropology courses because they showed me the importance of understanding different cultures. I think that those courses would help me a lot in relating to your overseas
customers and suppliers." 457-480 Appendix Adler 2/28/05 10:03 AM Page 473 APPENDIX TABLE 5 INTERVIEWING 473 Communication Behaviors of Successful Interviewees Statements about the position Had only vague ideas of what they wanted to do; changed "ideal job" up
to six times during the interview. Specific and consistent about the position they wanted; were able to tell why they wanted the company name Rarely used the company name Rarely used the company and position Made it clear that they were using
Expressed approval of information provided by the interviewer nonverbally and verbally: "That's great!" Explicitly indicated desire to work for this particular company. Picking up on interviewer nonverbally and confidently.
and backed up the claim with a specific example of "problem solving" or "toughness." Use of industry terms and technical jargon. Used tec
one word; did not elaborate. Gave general responses: "Fairly well." Supported claims with specific personal experiences, comparisons, statistics, statements of teachers and employers. Questions based on knowledge of the industry and the company
Personalized questions: "What would my duties be?" Control of time and topics Interviewee talked 37 percent of the time. Based on research reported by Lois J. Einhorn, "An Inner View of the Job Interview: An Inner View of the Job Interview time, initiated 36 percent of the time. Based on research reported by Lois J. Investigation of Successful Communicative Behaviors," Communication Education 30 (July 1981): 217-228. 457-480 Appendix Adler 474 APPENDIX 2/28/05 10:03 AM Page 474 INTERVIEWING CULTURAL IDIOM shallow: superficial, having limited interests 6. Where do you see yourself in five years? This familiar question is really asking, "Howard and the superficial and the super
ambitious are you?""How well do your plans fit with this company's goals?""How realistic are you?" If you have studied the industry and the company, your answer will reflect an understanding of the workplace realities and a sense of personal planning that should impress an employer. 7. What major problems have you faced, and how have you dealed.
with them? The specific problems aren't as important as the way you responded to them. What (admirable) qualities did you demonstrate as you grappled with the problems you have chosen to describe? Perseverance? Calmness? Creativity? You may even choose to describe a problem you didn't handle well and to show what you learned from the problems you have chosen to describe a problem you didn't handle well and to show what you learned from the problems you have chosen to describe a problem you didn't handle well and to show what you learned from the problems you have chosen to describe a problem you didn't handle well and to show what you have chosen to describe a problem you didn't handle well and to show what you have chosen to describe a problem you didn't handle well and to show what you have chosen to describe a problem you didn't handle well and to show what you have chosen to describe a problem you didn't handle well and to show what you have chosen to describe a problem you didn't handle well and to show what you have chosen to describe a problem you didn't handle well and to show what you have chosen to describe a problem you have chosen to describe
experience that can help you in the future. 8. What are your interests, you risk coming across as shallow. If you list too many interests, the interviewer may wonder if you have enough time and energy to focus on the job. Whatever answer you give, the best
answer will show how your interests contribute to your effectiveness as an employee. At the very least, show that your interests won't detract from your dedication to the organization that will be writing you a paycheck. 9. What are your greatest strengths and weaknesses? The "strength" question offers another chance to sell yourself. As you choose
an answer, identify qualities that apply to employment. "I'm a pretty good athlete" isn't a persuasive answer, unless you can show how your athletic skill is job related. For instance, you might talk about being a team player, having competitive drive, or having the ability to work hard and not quit in the face of adversity. Whatever answer you give to the
               question, try to show now your awareness of your flaws makes you a desirable person to hire. There are four ways to respond to this question: IT and a big project I tend to work too hard, and I can wear myself out. Discuss a weakness that is not related
to the job at hand, and end your answer with a strength that is related to the job. (for a job in accounting) "I'm not great at sales and marketing. I'm at my best working with numbers and talking to people about them." Discuss a
weakness the interviewer already knows about from your résumé, application, or the interview. "I don't have a lot of experience in multimedia design at this early stage of my career. But my experience in multimedia design at this early stage of my career. But my experience in other kinds of computer programming and my internship in graphic arts have convinced me that I can learn quickly." Discuss a weakness you have
been working to remedy. "I know being bilingual is important for this job. That's why I've enrolled in a Spanish course." 457-480 Appendix Adler 2/28/05 10:03 AM Page 475 APPENDIX 10. What are your salary requirements? Your answer should be based on a knowledge of the prevailing compensation rates in the industry and geography in question.
Shooting too high can knock you out of consideration, whereas shooting too low can cost you dearly. Give your answer naming a salary range and backing up your numbers: "Based on the research I've done about compensation in this area, I'd expect to start somewhere between $25,000 and $28,500." As you give your answer, watch the interviewer. If
he or she seems to respond favorably, you're in good shape. If you notice signs of disapproval, follow up:"... depending, of course, on fringe benefits and how quickly I could expect to be promoted. However, salary isn't the most important criterion for me in choosing a job, and I won't necessarily accept the highest offer I get. I'm interested in going
somewhere where I can get good experience and use my talents to make a real contribution."12 It's important to know your "bottom line" for compensation in advance so you don't end up accepting an offer at a salary you can't afford to take. BE PREPARED TO ASK QUESTIONS OF YOUR OWN Near the end of almost every employment interview, you
will be asked if you have any questions. It might seem as if you know all the important facts about the job, but a look at the following list suggests that a question or two can produce some useful information, as well as show the interviewer that you are also realistically assessing the fit between yourself and the organization. 1. Why is this position open
now? How often has it been filled in the past five years? What have been the primary reasons for people leaving it in the past? 2. What is the biggest problem facing your staff now? How have past and current employees had trouble solving this problem? 3. What are the primary results you would like to see me produce? 4. How would you describe the
management style I could expect from my supervisors? 5. Where could a person go who is successful in this position? Within what time frame? KEEP YOUR ANSWERS BRIEF It's easy to rattle on in an interview, either out of enthusiasm, a desire to show off your knowledge, or nervousness; but in most cases long answers are not a good idea. The
interviewer probably has lots of ground to cover, and long-winded answers won't help this task. A good rule of thumb is to keep your responses under two minutes. FOLLOW UP AFTER THE INTERVIEW Follow up your interviewer. Most candidates don't take this step, which will make your response especially
impressive. Express your appreciation for the chance of becoming associated with it. THE INFORMATION-GATHERING INTERVIEW Although you might not label them as such, you can expect to take part in a great many
information-gathering interviews during your career. Whenever you are seeking facts or opinions, you are conducting an informational interview: in- INTERVIEWING 475 CULTURAL IDIOM "bottom line": minimum requirements to rattle on: to utter responses that are excessively wordy long-winded: speaking for a long time ground to cover: topics to
discuss rule of thumb: practical plan of action 457-480 Appendix Adler 476 APPENDIX 2/28/05 10:03 AM Page 476 INTERVIEWING CULTURAL IDIOM warm up: stimulate the ability to converse botched: done poorly vestigation, or
conducting a survey of employees or customers. The following suggestions will help you do a good job. Prepare for the Interview Sometimes a period of research can pay dividends when the actual interview begins. Suppose, for instance, that you have decided to buy a new computer. Before you go shopping it would be smart to become knowledgeable
about the various types of systems available. What are the differences between the Windows and Macintosh operating systems, for example? Does your computer need to be compatible with computers already used by others? What software programs would best suit your needs, and what kind of system do they operate on? If you have answers to
questions like these your questions to dealers will be much more effective, and your chances of getting the best product will be greater. Choose the Right Interviewee Sometimes the most obvious person you should ask. Consider our example of
shopping for a computer. It's certainly necessary to interview sales representatives from the companies you're considering, but you might also get useful information from people who use that kind of equipment. Likewise, if you are trying to figure out why employee turnover is too high, be sure to consider all the people who might be able to offer
useful information: employees who have already left the company, those who haven't left, managers in your company, people in similar companies that don't suffer from the problem, and professors or other experts in the field. Sometimes knowing what to ask. Informational Interviewing Tips In addition to
the general suggestions on pages 468-469, follow these pointers when conducting informational interviews: BE CURIOUS Whereas ingredients like wording questions correctly and choosing the right environment are important, another essential ingredients like wording questions correctly and choosing the right environment are important, another essential ingredients like wording questions correctly and choosing the right environment are important, another essential ingredients like wording questions.
questioning until you're satisfied and to ask about points that interest you. Your sincere curiosity will often warm up an interviewe, who will be flattered by your interest. And an inquiring attitude will help you think of new and important questions you
prepared in advance. CHECK YOUR UNDERSTANDING After reading Chapter 4, you know that much listening is inaccurate. Keeping this fact in mind, you will find it a good idea to check your understanding of important ideas with the interviewee. Sometimes the consequences of misunderstanding are fairly small: following a botched recipe (was it a
tablespoon or a cup of vinegar?) or getting lost (were you supposed to turn right or left?). At other times, however, misunderstandings can be more serious. The 457-480 Appendix Adler 2/28/05 10:03 AM Page 477 APPENDIX fact that you understood an instructor's explanation won't change your low grade on a final exam, and the
Internal Revenue Service won't forgive your tax penalties because you thought the local agent said something that turned out to be something skills you learned earlier in this book. USE THE BEST INTERVIEWING STRATEGY In many cases, your best
approach is to ask questions in the simplest, most straightforward manner. There are cases, however, when a more strategic approach will produce better results. You have already read about the value of asking a merchant, "Will your advice about
products or service be any good?" you could ask about some product that you already know about. There are also times when the personality of your interviewee calls for a strategic way of presenting yourself. For instance, if you are talking to someone whose self-image is one of being an authority or a wise person, you might take a naive
approach: "Gee, I'm new at this, and you know so much." A little flattery never hurts. At other times you might want to act more like an interrogator, particularly when you think an interviewee is trying to treat you like a fool. For instance, you could show your knowledge and seriousness to a car mechanic by saying, "Why did you suggest a valve job
without running a compression check?" (Here's one case where gathering background information on automotive repair could improve your interviewing and save you a healthy chunk of money.) In still other cases, a sympathetic or chummy approach can be helpful. Investing the time and money to chat over coffee or beers can shake loose information
that an interviewee might be unwilling to share in a more formal setting. OTHER INTERVIEW TYPES The Persuasive interview occurs when an interviewee. The most recognizable type of persuasive interview involves the selling of some commercial product or
service. But there are also noncommercial situations in which the interviewer aims at changing the attitudes or behavior of an interviewee. Candidates meet with prospective voters, either in person or via broadcast media; religious people try to influence the beliefs of others; and representatives of charitable organizations are constantly seeking more
funds for their causes, often in interview settings. There are several steps to follow for a successful persuasive interviewe. DEFINE YOUR GOAL Chapter 10 talked in detail about defining a public speaking goal. Some of the same principles apply here. You ought to have a clear idea of just what kind of change you're seeking in your interviewee. Your
goal should be specifically worded, and it should be a realistically attainable one. UNDERSTAND THE INTERVIEWEE A persuasive approach that will convince one person will not convince others. Your best chance of success will come from understanding your interviewees—their interests, concerns, level of knowledge, and background.
INTERVIEWING 477 CULTURAL IDIOM chummy: friendly shake loose: stimulate a free exchange of 457-480 Appendix Adler 478 APPENDIX 2/28/05 10:03 AM Page 478 INTERVIEWING USE PERSUASIVE STRATEGIES Chapter 14 contains a list of persuasive strategies that is useful in both public speaking and interview settings. In addition to
those strategies, you should consider these guidelines:13 1. Welcome the interviewee's questions and reactions. They tell you how the interviewee is responding to your approach, giving you a chance to adapt and keep on target. It is important, however, for you to choose the time when the other person voices his or her concerns. You should keep
control of the interview to avoid complicating the discussion. 2. Show that you understand the interviewee's position. The fact that you understand will leave the other person feeling more positive about you, diminishing the "hard-sell" image. 3. Keep your approach clear and simply stated. Bring up only one subject at a time, and organize your
presentation logically. See Chapter 11 for more suggestions in this area. THE PERFORMANCE APPRAISAL INTERVIEW Performance appraisals are a fixture in most organizations after the number of employees grows beyond a handful. Their purpose is to acknowledge good performance, identify any areas where problems exist, resolve problems,
improve productivity, and help develop the employee's talents. At its best, the appraisal process is a valuable tool for helping employees feel better about work and for helping the organization. But in practice things often work out differently. More often than not, appraisal interviews result in lower productivity and greater apathy among employees. 14
Performance appraisals have the greatest chance of success when the interviewer takes a supportive, constructive approach. This means acknowledging good work as well as pointing out problem areas. It is also helpful to set specific goals for improvement to aim for during the next evaluation period. The information in Chapter 3 on behavioral goals
applies here. The interviewer needs to follow the descriptive approach described in Chapter 7, instead of using an excess of evaluative "you" language. Finally, it is essential for the interviewer to be a good listener who sincerely tries to understand the respondent's point of view. The surest way to get most employees to change is to involve them in the
review process. Top-down, "I talk, you listen" approaches rarely work. 15 As an interviewee, you can do plenty to make performance appraisals more successful, even with a superior who doesn't mean you are no good as a person, or even in other
areas in which you interact with the interviewer. Approach the interviewer and will help you grow. When faced with vague descriptions of your behavior ("You're doing well" or "You're not keeping up"), ask the
interviewer for specific examples. The goal here isn't to be argumentative, but rather to understand exactly what the interviewer is talking about. Finally, do your best to avoid acting defensively by counterattacking or withdrawing. Though reactions like these are understandable, they probably won't make you feel any better and are likely to lower
your stature in the interviewer's eyes. 457-480 Appendix Adler 2/28/05 10:03 AM Page 479 APPENDIX The Counseling Interview Few people are professional counselors or therapists, but at one time or another we're all faced with the chance to help solve another person's problem: love, career, family, money—the list of problems is a long one.
There are two approaches to counseling others with problems—directive and nondirective approach includes a good deal of question asking, and advice. There are definitely situations in which this approach is the best one, most often when the counselor has greater knowledge than the interviewee. For example, a friend might
approach you for advice on how to get help from some consumer protection agency. If you know the right procedure, you surely would share this information and suggest how your friend ought to proceed. There are many other cases when a directive approach isn't the best one. Suppose your problem-ridden friend asks for advice about whether or
not to get married. Even the best advice can be ignored or rejected at times like this. There is another risk in giving advice: If your friend follows your suggestions and things don't work out, you are the one who's likely to be held responsible. The most important decision in counseling interviews, then, is whether to use a directive or nondirective
approach. Be sure to base your decision on knowledge of the person seeking help and on the nature of the problem. In any case, it's essential to know just how much help and guidance one can give as a friend and when it's dangerous to begin playing counselor without the necessary training. It's better to say, "I don't know what to tell you" than to give
bad advice to a person in need. The Surveys are a type of information about the larger population. Surveys are used in government, business, and education. Interviews are a valuable way of surveying, because they provide greater
respondent cooperation, depth of response, and flexibility than other means of gathering data, such as questionnaires. In order to be effective, survey interviews must collect data from a representative sample of poor sampling occurred in the 1936 presidential election, when a popular magazine, Literary
Digest, interpreted the results of over two million survey responses to predict that Alfred Landon would beat Franklin D. Roosevelt by a landslide. Hindsight showed that the incorrect prediction arose from the fact that the respondents were chosen from telephone directories and automobile registration lists. During the Great Depression, only upper-
and middle-class people fell into these categories. Thus, the survey failed to give adequate representation to the millions of less affluent people who were to vote for Roosevelt. Most survey interviews are highly structured, with respondents are, in
fact, being approached in the same way. Survey interviewers are trained to standardize their approach, even to the extent of repeating the same nonverbal behaviors from one situation to the next. For example, a smile in one interview might encourage responses that would differ from those elicited by a more restrained approach. INTERVIEWING
```

```
CULTURAL IDIOM by a landslide: by an overwhelming majority 479 457-480 Appendix Adler 480 APPENDIX 2/28/05 10:03 AM Page 480 INTERVIEWING SUMMARY Interviewing is a special kind of conversation, being more purposeful, structured, controlled, and one sided than other types of two-party interaction. There are many types of
interviews—information gathering, selection, problem and evaluation, and persuasive. Each of these types contains several subcategories, which are listed in Table 1. A successful interviewer should define the goal of the session, develop tentative questions, and
arrange the setting. The questions should be closely related to the purpose of the interview. Thought should also be given to whether questions will be factual or opinion seeking, open or closed, and direct or indirect. When necessary, primary questions should be followed up by secondary questions. In the preparation stage, the interviewee should clarify
the interviewer's goals as much as possible and do whatever planning will help the session, the interviewer should control and focus the conversation, help the subject feel comfortable, and probe for important in-formation. The interviewee's role includes
giving clear, detailed answers, keeping on the subject, and correcting any misunderstandings. In addition, interviewees should be sure to accomplish their own requirements. Selection and information gathering interviews were
discussed in some detail; and persuasive, appraisal, counseling, and survey interviews were briefly described. Gordon, "Features of Simplified Register in Speech to Elderly Conversationalists." International Journal of Psycholinguistics 8, 3 (1981): 7-31. 3. For an example of how demographics have been taken into consideration in great speeches, see Gregory Stephens, "Frederick Douglass' Multiracial Abolitionism: 'Antagonistic Coopera- 497 tion' and
'Redeemable Ideals' in the July 5 Speech." Communication Studies 48 (Fall 1997): 175-194. On July 5, 1852, Douglass gave a speech entitled "What to the Slave Is the 4th of July," attacking the hypocrisy of Independence Day in a slaveholding republic. It was one of the greatest antislavery speeches ever given, and part of its success stemmed from
the way Douglass sought common ground with his multiracial audience. 4. Examples from Julie Hill, "Changing Faces, Facing Changes." Presentations (November 2000): 42. 5. 12 1. R. B. Rubin, A. M. Rubin, and F. F. Jordon, "Effects of Instruction on Communication Apprehension and Communication Education 46 (1997): 104-114. See 9. also Peter D. MacIntyre and J. Renee MacDonald, "Public Speaking Anxiety: Perceived Competence and Audience Congeniality." Communication Education 47
4 (October 1998): 359-365. In this study, the group with the highest anxiety showed the largest improvement in perceived competence and perception of the audience pleasantness. The speaker's perception of the audience pleasantness. The speaker's perception of the audience is a key factor in public speaking anxiety. See, for example, J. Borhis and M.Allen, "Meta-analysis of the Relationship between
Communication Apprehension and Cognitive Performance." Communication Education 41, 1 (January 1992): 68-76. John A. Daly, Anita L. Vangelisti, and David J. Weber, "Speech Anxiety Affects How People Prepare Speeches: A Protocol Analysis of the Preparation Process of Speakers." Communication Monographs 62 (December 1995). Researchers
generally agree that speech anxiety has three causes: genetics, social learning, and inadequate skills acquisition. See, for example, Michael J. Beatty and Kristin Marie Valencic, "Context-Based Apprehension versus Planning Demands: A Communibiological Analysis of Anticipatory Public Speaking Anxiety." Communication Education 49, 1 (January
2000): 58. See, for example, Chris R. Sawyer and Ralph R. Behnke, "Communication Apprehension and Implicit Memories of Public Speaking State Anxiety." Communication Quarterly 45, 3 (Summer 1997): 211-222. Adapted from A. Ellis, A New Guide to Rational Living (North Hollywood, CA:Wilshire Books, 1977). Gerald M. Philips listed a different
set of beliefs that he believed contributes to reticence. The beliefs are: (1) an exaggerated sense of self- important to others than others see them.) (2) Effective speakers are born, not made. (3) Skillful speaking is manipulative. (4) Speaking is not that important. (5) I can speak whenever I
want to; I just choose not to. (6) It is better to be quiet and let people think you are a fool than prove it by talking (they assume they will be evaluated negatively). (7) What is wrong with me requires a (quick) cure. See James A. Keaten, Lynne Kelly, and Cynthia Finch, "Effectiveness of the Penn State Program in Changing Beliefs Associated with
Reticence." Communication Education 49, 2 (April 2000): 134. R. R. Behnke, C. R. Sawyer, and P. E. King, "The Communication of Public Speaking Apprehension."
Communication Reports 10, 1 (Winter 1997): 87-94. Besides visualization, treatments for speech anxiety include skills training (such as a public speaking class), systematic desensitization (such as having practice sessions until you feel more comfortable with the real thing), rational-emotive therapy (recognizing irrational beliefs, as discussed earlier
in this chapter), interpersonal support (such as coaching), and physical exercise. Students tend to do best when selecting their own treatments." Communication Education 49, 119
(January 2000): 72. Ralph R. Behnke and Chris R. Sawyer, "Milestones of Anticipatory Public Speaking Anxiety." Communication Education 48, 2 (April 1999): 165. 481-500_Notes_Address on Terrorism before a Joint Meeting of Congress," The New York Times (September 21,
2001), p. B4. President Bush delivered his speech from a TelePrompTer. 11. Speeches are also easier to understand than written text. See, for example, Donald L. Rubin, Teresa Hafer, and Kevin Arata, "Reading and Listening to Oral-Based versus Literate-Based Discourse." Communication Education 49, 2 (April 2000): 121. An interesting study in this
area is D. P. Hayes's "Speaking and Writing: Distinct Patterns of Word Choice." Journal of Memory and Language 27 (October 1988): 572-585. This extensive study of written/spoken language differences found these differences so pronounced that "conversations between college graduates more closely resemble a preschool child's speech to its
parents than texts from newspapers." 12. J.Tarver, "Can't Nobody Here Use This Language? Function and Quality in Choosing Words." Vital Speeches of the Day (May 1, 1979): 420-423. 13. John was coached by Randy Richardson and Chip Hall. 501-510 Gloss Adler 2/28/05 10:03 AM Page 501 Articulation The
process of pronouncing all the necessary parts of a word. Assertion Direct expression of the sender's needs, thoughts, or feelings, delivered in a way that does not attack the receiver's dignity. Attending The process of focusing on certain stimuli from the environment. Attitude Predisposition to respond to an idea, person, or thing favorably or
unfavorably. Audience analysis A consideration of characteristics including the type, goals, demographics, beliefs, attitudes, and values of listeners devote to a speech. Audience involvement Level of commitment and attention that listeners devote to a speech. Audience involvement Level of commitment and attention that listeners devote to a speech.
Behavioral description An account that refers only to observable phenomena. Belief An underlying conviction about the truth of an idea, often based on cultural training. Brainstorming A method for creatively generating ideas in groups by minimizing criticism and encouraging a large quantity of ideas without regard to their workability or ownership
by individual members. Breadth (of self-disclosure) The range of topics about which an individual discloses. See also Depth. Buzz groups A group discussion. Subgroups simultaneously address an issue and then report back to the group at large. Causal reasoning See
Cause-effect pattern. Cause-effect pattern. Cause-effect pattern Organizing plan for a speech that demonstrates how one or more events result in another event or events. GLOSSARY Abstract language that lacks specificity or does not refer to observable behavior or other sensory data. See also Behavioral description. Abstract ion ladder A range of more-to
lessabstract terms describing an event or object. Action-oriented listening A listening style that is primarily concerned with accomplishing the task at hand. Actuate To move members of an audience toward a specific behavior. Ad hominem fallacy Fallacious argument that attacks the integrity of a person to weaken his or her position. Addition The
articulation error that involves adding extra parts to words. Advising response in which the receiver offers suggestions about how the speaker should deal with a problem. Affect blend The combination of two or more expressions, each showing a different emotion. Affinity The degree to which people like or appreciate one another. As
to use in an attack on the speaker. Analogy Extended comparison that can be used as supporting material in a speech. Analyzing response A helping style in which the listener offers an interpretation of a speaker's message. Anchor The position supported by audience members before a persuasion attempt. Anecdote A brief personal story used to
illustrate or support a point in a speech. Argumentum ad populum fallacy Fallacious reasoning based on the dubious notion that because many people favor an idea, you should, too. Argumentum ad verecundiam fallacy Fallacious reasoning that tries to support a belief by relying on the testimony of someone who is not an authority on the issue being
argued. 501-510 Gloss Adler 502 2/28/05 10:03 AM Page 502 GLOSSARY Certainty Messages that dogmatically imply that the speaker's position is correct and that the other person's ideas are not worth considering. Likely to generate a defensive response. Chain network A communication network in which information passes sequentially from one
member to another. Channel Medium through which a message passes from sender to receiver. Chronemics The study of how humans use and structure time. Citation Brief statement of supporting material in a speech. Climax pattern Organizing plan for a speech that builds ideas to the point of maximum interest or tension. Closed question Interview
question that can be answered in a few words. Coercive power The power to influence others by the threat or imposition of unpleasant consequences. Cohesiveness The totality of forces that causes members to feel themselves part of a group and makes them want to remain in that group. Collectivistic orientation A cultural orientation focusing on the
welfare of the group as a whole, rather than a concern by individuals for their own success. See also Individualistic orientation. Column chart Visual aid that compares two or more values by showing them as elongated vertical rectangles. Communication A continuous, irreversible, transactive process involving communicators who occupy different but
overlapping environments and are simultaneously senders and receivers of messages, many of which are distorted by physical and psychological noise. Communication climate The emotional tone of a relationship as it is expressed in the messages that the partners send and receive. Communication competence Ability to maintain a relationship on
terms acceptable to all parties. Compromise An approach to conflict resolution in which both parties attain at least part of what they seek through self-sacrifice. Conclusion (of a speech) The final structural unit of a speech, in which the main points are reviewed and final remarks are made to motivate the audience to act or help listeners remember
key ideas. Confirming response A response that conveys valuing, caring, and/or respecting another person. Conflict An expressed struggle between at least two interdependent parties who perceive incompatible goals, scarce rewards, and interference from the other party in achieving their goals. Conflict stage A stage in problem-solving groups when
members openly defend their positions and question those of others. Consensus Agreement between group members about a decision. Content message A message that communicates information about the subject being discussed. See also Relational message and their positions and question those of others. Consensus Agreement between group members about a decision.
 Contextually interpersonal communication Any communication that occurs between two individuals. See also Qualitatively interpersonal communication. Control The social need to influence others. Controlling
                                                                                                                                                                                                                                                                                             communication Messages in which the sender tries to impose some sort of outcome on the receiver, usually resulting in a defensive reaction
Convergence Accommodating one's speaking style to another person, who usually is desirable or has higher status. Convincing A speech goal that aims at changing audience members' beliefs, values, or attitudes. Convincing A speech goal that aims at changing audience members' beliefs, values, or attitudes.
one another well. Counterfeit question A question that disguises the speaker's true motive, which do not include a genuine desire to understand the other person. Crazymaking Passive-aggressive messages sent in indirect ways that frustrate and confuse the recipient. Credibility The believability of a speaker or other source of information. Critical
listening Listening in which the goal is to judge the quality or accuracy of the speaker's remarks. Database A computerized collection of information that the user is seeking. Debilitative stage fright Intense level of anxiety about speaking before an audience, resulting in poor performance
Decoding The process in which a receiver attaches meaning to a message. Deescalatory conflict spiral A communication spiral in which the parties slowly lessen their dependence on one another, withdraw, and become less invested in the relationship. Defensive listening A response style in which the receiver perceives a speaker's comments as an
attack, Deletion Articulation error that involves leaving off parts of words, Demographics Audience characteristics that can be analyzed statistically, such as age, gender, education, group membership, and so on, Depth (of self-
disclosure) The level of personal information a person reveals on a particular topic. See also Breadth. Description In terms of communication. 501-510 Gloss Adler 2/28/05 10:03 AM Page 503 GLOSSARY Descriptive communication Messages that
describe the speaker's position without evaluating others. Synonymous with "I" language. Developmental models (of relational maintenance) These models propose that the nature of communication is different in various stages of interpersonal relationships. Diagram A line drawing that shows the most important components of an object. Dialectical
model (of relational maintenance) A model claiming that, throughout their lifetime, people in virtually all interpersonal relationships must deal with equally important, simultaneous, and opposing forces such as connection and autonomy, predictability and novelty, and openness versus privacy. Dialectical tensions Inherent conflicts that arise when two
opposing or incompatible forces exist simultaneously. Direct aggression An expression feelings or both that attacks the position and dignity of the receiver. Direct question Interview question that makes a straightforward
request for information. See also indirect question. Disconfirming response A message that expresses a lack of caring or respect for another person. Disfluency A nonlinquistic verbalization. For example, um, er, ah. Divergence A linquistic strategy in which speakers emphasize differences between their communicative style and others' in order to
create distance. Dyad A two-person unit. Dyadic communication Two-person communication. See also Functional roles Individual roles played by group members that inhibit the group's effective operation. See also Functional roles. Either-or fallacy Fallacious reasoning that sets up false alternatives, suggesting that if the inferior one must be rejected, then
the other must be accepted. Emblems Deliberate nonverbal behaviors with precise meanings, known to virtually all members of a cultural group. Emergence phase A stage in problem solving when the group moves from conflict toward a single solution. Emotional evidence Evidence Evidence Evidence that arouses emotional reactions in an audience. Emotive language
Language that conveys the sender's attitude rather than simply offering an objective description. Empathic listening in which the goal is to help the speaker solve a problem. Empathy The ability to project oneself into another person's point of view, so as to experience the other's thoughts and feelings. Encoding The process of putting
thoughts into symbols, most commonly words. 503 Environment Both the personal perspectives of the parties involved. Equality A type of supportive communication suggesting that the sender regards the receiver as worthy of respect. Equivocal language with more than one likely
interpretation. Equivocal words Words that have more than one dictionary definition. Equivocation A vague statement that can be interpreted in more than one way. Escalatory spiral A reciprocal pattern of communication in which messages, either confirming or disconfirming, between two or more communicators reinforce one another. Ethical
persuasion Persuasion in an audience's best interest that does not depend on false or misleading information to induce change in that audience. Euphemism A pleasant-sounding term used in place of a more direct but less pleasant one. Evaluative communication Messages in which the sender judges the receiver in some way, usually resulting in a
defensive response. See also "You" language. Evidence Material used to prove a point, such as testimony, statistics, and examples. Example A specific case that is used to demonstrate a general idea. Expert power The ability to influence others by virtue of one's perceived expertise on the subject in question. See also Information power. Explanations
Speeches or presentations that clarify ideas and concepts already known but not understood by an audience. External noise Factors outside the receiver that interfere with the accurate reception of a message. Face The socially approved
identity that a communicator tries to present. See also Impression management. Facework Verbal and nonverbal behavior designed to create and maintain a communicator's face and the face of others. Facilitative stage fright A moderate level of anxiety about speaking before an audience that helps improve the speaker's performance. Factual
question Interview question that investigates matters of fact. See also Opinion question. Factual statement and opinion statement and opinion statement and opinion statement and opinion statement.
communicator deals with. 501-510 Gloss Adler 504 2/28/05 10:03 AM Page 504 GLOSSARY Fallacy of catastrophic failure The irrational beliefs in which (1) conclusions (usually negative) are based on limited evidence or (2) communicators exaggerate
their shortcomings. Fallacy of perfection The irrational belief that a worthwhile communicator should be able to handle every situation with complete confidence and skill. Feedback The discernible response of a receiver to a sender's message. Focus group Used in market research by sponsoring organizations to survey potential users or the public at
large regarding a new product or idea. Force field analysis A method of problem analysis that identifies the forces contribution of the problem and the forces that inhibit its resolution. Formal outline A consistent format and set of symbols used to identify the structure of ideas. See also informal roles. Formal role A role assigned to a
person by group members or an organization, usually to establish order. Forum A discussion format in which audience members are invited to add their comments to those of the official discussion format in which audience members are invited to add their comments to those of the official discussion format in which audience members are invited to add their comments to those of the official discussion format in which audience members are invited to add their comments to those of the official discussion format in which audience members are invited to add their comments to those of the official discussion format in which audience members are invited to add their comments to those of the official discussion format in which audience members are invited to add their comments to those of the official discussion format in which audience members are invited to add their comments to those of the official discussion format in which audience members are invited to add their comments to those of the official discussion format in which audience members are invited to add their comments to those of the official discussion format in which audience members are invited to add their comments to those of the official discussion format in which audience members are invited to add their comments.
roles: Task roles: Social roles, Gatekeepers Producers of mass messages will be delivered to consumers, how those messages will be delivered to consumers.
contrasting styles of verbal and nonverbal behavior. Each set describes a communication style that is likely to arouse defensiveness and a contrasting style that is likely to prevent or reduce it. Developed by Jack Gibb. Group A small collection of people whose members interact with each other, usually face to face, over time in order to reach goals.
Group goals Goals that a group collectively seeks to accomplish. See also Individual goals. Groupthink A group's collective striving for unanimity that discourages realistic appraisals of alternatives to its chosen decision. Growth group A group whose goal is to help members learn more about themselves. Haptics The study of touch. Hearing The
process wherein sound waves strike the eardrum and cause vibrations that are transmitted to the brain. Hidden agendas Individual goals that group members are unwilling to reveal. High-context culture A culture that avoids direct use of language to express information, especially about relational matters. Instead, members of the culture rely on the
context of a message to convey meaning. See also Low-context culture. Hypothetical example Example that asks an audience to imagine an object or event. Hypothetical question Seeks a response by proposing a "what-if" situation. "I" language that describes the speaker's position without evaluating others. Synonymous with Descriptive
communication. Illustrators Nonverbal behaviors that accompany and support verbal messages. Immediacy The degree of interest and attraction we feel toward and communicate to others. As with all relational messages, immediacy is usually expressed nonverbally. Impersonal communication Behavior that treats others as objects rather than as
individuals. See also Interpersonal communication. Impression management Strategies used by communication.
aggression; Assertion. Indirect persuasion Persuasion Persuasion Persuasion Persuasion Persuasion Interview guestion Interview guestion Interview guestion Interview guestion Interview guestion Persuasion Persu
goals. Individualistic orientation A cultural orientation focusing on the value and welfare of individual members, as opposed to a concern for the group as a whole. See also Factual statement. Informal roles Roles usually not explicitly
recognized by a group that describe functions of group members, rather than their positions. Sometimes called "functional roles." See also Formal role. Information hunger Audience desire, created by a speaker, to learn information. Information overload
Decline in efficiency that occurs when the rate of complexity of material is too great to manage. Information one possesses. See also Expert power. 501-510 Gloss Adler 2/28/05 10:03 AM Page 505 GLOSSARY Information underload Decline in efficiency that occurs
when there is a shortage of the information that is necessary to operate effectively. Informational interview intended to collect facts and opinions from the respondent. Informational listening in which the goal is to receive accurately the same thoughts the speaker is trying to convey. Informational interview intended to collect facts and opinions from the respondent.
statement of the objective of a speech, worded to stress audience knowledge and/or ability. Insensitive listening Failure to recognize the thoughts or feelings that are not directly expressed by a speaker, instead accepting the speaker and or feelings that are not directly expressed by a speaker, instead accepting the speaker and or feelings that are not directly expressed by a speaker, instead accepting the speaker.
Insulated listening A style in which the receiver ignores undesirable information. Interpersonal communication in which the parties consider one another as unique, idiosyncratic social rules; and a high degree of information exchange.
Interview A structured form of oral communication involving two parties, at least one of whom communicates in ways designed to achieve a preconceived purpose. Intimacy can be manifested in several ways: physically, intellectually, emotionally, and via shared activities.
Intimate distance One of Hall's four distance zones, ranging from skin contact to eighteen inches. Introduction (of a speech, in which the speaker captures the audience's attention and previews the main points to be covered.
Irrational thinking Beliefs that have no basis in reality or logic; one source of debilitative stage fright. Jargon The specialized vocabulary that is used as a kind of shorthand by people with common backgrounds and experience. Johari Window A model that describes the relationship between self-disclosure and self-awareness. Judging response A
reaction in which the receiver evaluates the sender's message either favorably or unfavorably. Kinesics The study of body movement, gesture, and posture. Knowledge Understanding acquired by making sense of the raw material of information. Laissez-faire leadership style A style in which the designated leader gives up his or her formal role,
transforming the group into a loose collection of individuals. Latitude of acceptance In social judgment theory, statements that a receiver would not reject. Latitude of noncommitment In social judgment theory, statements that a receiver
would not care strongly about one way or another. Latitude of rejection In social judgment theory, statements that a receiver could not possibly accept. Leader See Nominal leader. Leadership Grid A two-dimensional model that identifies leadership styles as combination of a concern for people and the task at hand. Leading question A question in
which the interviewer—either directly—signals the desired answer. Learning group A group whose goal is to expand its knowledge about some topic other than itself or its individual members. See also Growth group. Legitimate power The ability to influence a group owing to one's position in a group. See also Nominal leader. Line chart
Visual aid consisting of a grid that maps out the direction of a trend by plotting a series of points. Linear communication model A characterization of communication model A characterization of communication model A characterization of communication as a one-way event in which a message flows from sender to receiver. Linguistic determinism Theory that a culture's worldview is unavoidably shaped and reflected by the language its
members speak. Linguistic relativism A moderate form of linguistic determinism that argues that language exerts a strong influence on the perceptions of the people who speak it. Listening Process wherein the brain reconstructs electrochemical impulses generated by hearing into representations of the original sound and give them meaning. Lose-
lose problem solving An approach to conflict resolution in which neither party achieves its goals. Low-context culture A culture that relies heavily on language to make messages, especially of a relational nature, explicit. See also High-context culture. Maintenance functions Behavior in a small group that maintains or improves the quality of
relationships among members. Also called Social roles. See also Task roles. Managerial grid A two-dimensional model that describes the various combinations of a leader's concern with taskrelated and relational goals. Manipulators Movements in which one part of the body grooms, massages, rubs, holds, fidgets, pinches, picks, or otherwise
manipulates another part. Manuscript speech A speech that is read word for word from a prepared text. Mass communication The transmission of messages to large, usually widespread audiences via broadcast means 501-510 Gloss Adler 506 2/28/05 10:03 AM Page 506 GLOSSARY (such as radio and television), print (such as newspapers,
magazines, and books), multimedia (such as CD-ROM, DVD, and the World Wide Web), and other forms of media such as recordings and movies. Mediated communication sent via a medium other than face-to-face interaction, e.g., telephone, e-mail, instant messaging. Can be both mass and personal. Memorized speech A speech
```

```
learned and delivered by rote without a written text. Message A sender's planned and unplanned words and nonverbal behaviors. Metacommunication about communication. Model (in speeches and presentations) Replica of an object being discussed. Usually used when it
would be difficult or impossible to use the actual object. Motivated sequence A five-step plan used in persuasive speaking; also known as "Monroe's Motivated Sequence." Narration Presentation of speech supporting material as a story with a beginning, middle, and end. Narrative The stories people create and use to make sense of their personal
worlds. Neutral question A question that gives the interviewee a chance to respond without any influence from the interviewer. Noise External, physiological, and psychological distractions that interfere with the accurate transmission and reception
of a message. Nominal group technique Method for including the ideas of all group members in a problem-solving session. Nominal leader The person who is identified by title as the leader of a group. Nonassertion The inability or unwillingness to express one's thoughts or feelings when necessary. Nonverbal communication Messages expressed by
other than linguistic means. Norms Shared values, beliefs, behaviors, and procedures that govern a group's operation. Number chart Visual aid that lists numbers in tabular form in order to clarify information. Open question Interview question that requires the interviewee to respond in detail. See also Closed question. Opinion question Interview
question seeking the interviewee's opinion. See also Factual question. Opinion statement based on the speaker's beliefs. See also Factual statement based on the speaker's beliefs. See also Factual statement based on the speaker's beliefs. See also Factual statement based on the speaker's beliefs. See also Factual statement based on the speaker's beliefs. See also Factual statement based on the speaker's beliefs.
 which participants consider a topic more or less conversationally, without formal procedural rules. Panel discussions may be facilitated by a moderator. Paralanguage Nonlinguistic means of vocal expression: rate, pitch, tone, and so on. Paraphrasing Feedback in which the receiver rewords the speaker's thought and feelings. Can be used to verify
understanding, demonstrate empathy, and help others solve their problems. Parliamentary procedure A problem-solving method in which specific rules govern the way issues may be discussed and decisions made. Participative decision making Development of solutions with input by the people who will be affected. Passive aggression An indirect
expression of aggression, delivered in a way that allows the sender to maintain a facade of kindness. People-oriented listening A listening and maintaining positive relationships. Perceived self The person we believe ourselves to be in moments of candor. It may be identical with or different from the
presenting and ideal selves. Perception checking A three-part method for verifying the accuracy of interpretations, including a description of the interpretations, including a description of the interpretations, and a request for confirmation of the interpretations.
problems exist, resolve problems, improve productivity, and help develop the employee's talents. Personal distance one of Hall's four distance zones, ranging from eighteen inches to four feet. Personality A relatively consistent set of traits a person exhibits across a variety of situations. Persuasion The act of motivating a listener, through
communication, to change a particular belief, attitude, value, or behavior. Persuasive interviewee. Phonological rules Governing how sounds are combined to form words. Physical need Identified by Maslow as the most fundamental type of the thoughts or behavior of an interviewee. Phonological rules governing how sounds are combined to form words. Physical need Identified by Maslow as the most fundamental type of the thoughts or behavior of an interviewee.
human need. Includes sufficient food, air, rest, and the ability to reproduce as a species. Physiological noise Biological factors in the receiver that interfere with accurate reception of a message. Pictograph A visual aid that divides a circle into wedges
representing percentages of the whole. Pitch The highness or lowness of one's voice. 501-510 Gloss Adler 2/28/05 10:03 AM Page 507 GLOSSARY Post hoc fallacious reasoning that mistakenly assumes that one event causes another because they occur sequentially. Power The ability to influence others' thoughts and/or actions. Power distance
The degree to which members are willing to accept a difference in power and status between members of a group. Pragmatic rules are rarely written down or discussed. Presenting self The image a person presents to others. It may be identical to or
different from the perceived and ideal selves. See also Face. Primary question asked to elicit information on an interview topic. See also Secondary question asked to enable a problem by encouraging exploratory thinking. Probe An interjection, silence, or other brief remark designed to open up
or direct an interviewee. Problem census Used to equalize participation in groups when the goal is to identify important issues or problems. Members first put ideas on cards, which are then compiled by a leader to generate a comprehensive statement of the issue or problem. Problem orientation A supportive style of communication in which the
communicators focus on working together to solve their problems instead of trying to impose their own solutions on one another. Problem-solution pattern for a speech that describes an unsatisfactory state of affairs and then proposes a plan to remedy the problem. Problem-solving group A task-related group whose goal is to
resolve a mutual concern of its members. Procedural norms Norms that describe rules for the group's operation. Proposition of fact Claim bearing on issue in which there are two or more sides of conflicting factual evidence. Proposition of policy Claim bearing on
issue that involves adopting or rejecting a specific course of action. Proposition of value Claim bearing on issue involving the worth of some idea, person, or object. Provisionalism A supportive style of communication in which the sender expresses a willingness to consider the other person's position. Proxemics The study of how people and animals use
space. Pseudolistening An imitation of true listening in which the receiver's mind is elsewhere. Psychological noise Forces within a communication that occurs when a group becomes too large for all members to contribute. It is
characterized by an unequal amount of speaking and by limited verbal feedback. Public distance zones, extending outward from twelve feet. Purpose statement A complete sentence that describes precisely what a speaker wants to accomplish. Qualitatively interpersonal communication Interaction in which people treat one
another as unique individuals, regardless of the context in which the interaction occurs or the number of people involved. Contrasted with impersonal communication. See also Contextually interpersonal communication. See also Contextually interpersonal communication. See also Contextually interpersonal communication.
understanding. Also, a style of helping in which the receiver seeks additional information from the sender. Some questioning responses are really disguised advice. Rate The speed at which a speaker utters words. Receiver One who notices and attends to a message. Reductio ad absurdum fallacy Fallacious reasoning that unfairly attacks an argument
by extending it to such extreme lengths that it looks ridiculous. Referent power The ability to influence others by virtue of the degree to which one is liked or respected. Reflected appraisal The theory that a person's self-concept matches the way the person believes others regard him or her. Reinforcement stage A stage in problem-solving groups
when members endorse the decision they have made. Relational maintenance Communication aimed at keeping relationship between two or more individuals. Relational message A message that expresses the social relationship between two or more individuals. Relational message that expresses the social relationship between two or more individuals.
of recalling previously introduced information. Recall drops off in two phases: short- and long-term memory loss. Respect The degree to which we hold others in esteem. Responding Providing observable feedback to another person's behavior or speech. Reward
power The ability to influence others by the granting or promising of desirable consequences. Roles The patterns of behavior expected of group members. Rule Explicit, officially stated guideline that governs group functions and member behavior. 501-510_Gloss_Adler 508 2/28/05 10:03 AM Page 508 GLOSSARY Search string A collection of letters are the patterns of behavior.
and numbers entered into a computer search engine. Secondary question not revealed by a primary question not revealed by a primary question interview in which a candidate is evaluated for a new position, either initial employment, promotion, or reassignment. Selective listening A listening style in
 which the receiver responds only to messages that interest him or her. Self-concept The relatively stable set of perceptions each individual holds of himself or herself. Self-disclosure The process of deliberately revealing information about oneself that is significant and that would not normally be known by others. Self-esteem The part of the self-
concept that involves evaluations of self-worth. Self-fulfilling prophecy A prediction or expectation of an event that makes the outcome more likely to occur than would otherwise have been the case. Self-serving bias The tendency to interpret and explain information in a way that casts the perceiver in the most favorable manner. Semantic rules Rules
that govern the meaning of language as opposed to its structure. See also Syntactic rules. Sender The originator of a message. Sex role The social orientation that governs behavior, in contrast to a person's biological gender. Significant other A person whose opinion is important enough to affect one's self-concept strongly. Signpost A phrase that
emphasizes the importance of upcoming material in a speech. Sincere question A question posed with the genuine desire to learn from another person. See Counterfeit question A question another person. See Counterfeit question A question another person. See Counterfeit question A question another person.
structure. Slang Language used by a group of people whose members belong to a similar coculture or other group. Slurring The articulation error that involves overlapping the end of one word with the beginning of the next. Small group of a size such that every member can participate actively with the other members. Social distance One of
Hall's distance zones, ranging from four to twelve feet. Social group A group whose goal is to meet the social needs of its members rather than to meet task-related goals. Social judgment theory Explanation of attitude change that posits that opinions will change only in small increments and only when the target opinions lie within the receiver's
latitudes of acceptance and noncommitment. Social norms Group norms that govern the way members relate to one another. See also Task norms. Social penetration model A model describing how intimacy can be achieved via the breadth and depth of self
disclosure. Social roles Emotional roles concerned with maintaining smooth personal relationships among group members. Also termed "Maintenance functions." See also Task functions. Sociogram Graphic representation of the interaction patterns in a group. Space pattern Organizing plan in a speech that arranges points according to their physical
location. Specific purpose The precise effect that the speaker wants to have on an audience. Expressed in the form of a purpose statement. Spiral Reciprocal communication behavior in which the sender expresses a message without any attempt to
manipulate the receiver. Stage hogging A listening style in which the receiver is more concerned with making his or her own point than with understanding the speaker. Strategy A defense-arousing style of communication in which the
sender tries to manipulate or trick a receiver; also, the general term for any type of plan, as in the plan for a persuasive speech. Substitution The articulation error that involves replacing part of a word with an incorrect sound. Superiority A defense-arousing style of communication in which the sender states or implies that the receiver is inferior
Supporting response A response Style in which the receiver reassures, comforts, or distracts the person seeking help. Survey research Information about the larger group. Symbol An arbitrary sign used to represent a thing, person, idea, event, or
relationship in ways that make communication possible. Sympathy Compassion for another's situation. See also Empathy. Symposium A discussion format in which symbols can be
arranged as opposed to the meanings of those symbols. See also Semantic rules. Target audience that must be influenced in order to achieve a persuasive goal. Task norms Group norms that govern the way members handle the job at hand. See also Social norms. 501-510 Gloss Adler 2/28/05 10:03 AM Page 509 GLOSSARY
Task roles Roles group members take on in order to help solve a problem. See Social roles. Territory Fixed space that an individual assumes some right to occupy. Testimony Supporting material that proves or illustrates a point by citing an authoritative source. Thesis statement A complete sentence describing the central idea of a speech. Time-
oriented listening A listening style that is primarily concerned with minimizing the time necessary to accomplish the task at hand. Time pattern Organizing plan for a speech that arranges points according to logical types or categories. Trait theories of leadership The belief that it is
possible to identify leaders by personal traits, such as intelligence, appearance, or sociability. Transactional communication model A characterization of messages in an ongoing, irreversible process. Transition Phrase that connects ideas in a speech by showing how one relates to the other.
Uncertainty avoidance The cultural tendency to seek stability and honor tradition instead of welcoming risk, uncertainty, and change. Understanding The act of interpreting a message by following syntactic, semantic, and pragmatic rules. 509 Value A deeply rooted belief about a concept's inherent worth. Visual aids Graphic devices used in a speech
to illustrate or support ideas. Visualization Technique for behavior rehearsal (for example, for a speech) that involves imagining the successful completion of the task. Vocal citation A simple, concise, spoken statement of the source of your evidence. Wheel network A communication network in which a gatekeeper regulates the flow of information from
all other members. Whorf-Sapir hypothesis Theory that the structure of a language shapes the worldview of its users. Win-lose problem solving An approach to conflict resolution in which the parties work together to satisfy all
their goals. Word chart Visual aid that lists words or terms in tabular form in order to clarify information. Working outline Constantly changing organizational aid used in planning a speech. "You" language that judges another person, increasing the likelihood of a defensive reaction. See also Evaluative communication. This page
